

EMI Suppression Filters (for DC)/ Chip Inductors for Automotive

Explanation of category in this catalog

Infotainment

Info-
tainment

The product for entertainment equipment like car navigations, car audios, and body control equipment like wipers, power windows.

Powertrain, Safety

Power-
train

The product for high reliability applications like powertrain and safety, in addition to infotainment applications.

EU RoHS Compliant

- All the products in this catalog comply with EU RoHS.
- EU RoHS is "the European Directive 2011/65/EU on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment."
- For more details, please refer to our web page, "Murata's Approach for EU RoHS" (<https://www.murata.com/en-eu/support/compliance/rohs>).

Because of the difference of measurement condition, electrical characteristics plots on this catalog may have some difference to official specification value.

Contents

Product specifications are as of May 2021.

Product Guide

BL □

Inductor Type

		Part Number/Series	Applications	Size Code in mm (in inch)	Impedance at 100MHz		
For General Band Noise	Universal Type [Power Lines / Signal Lines]	BLM03AX p9	Info-tainment	0603 (0201)	10Ω to 1000Ω		
		BLM15AX p28	Info-tainment	1005 (0402)	10Ω to 1000Ω		
	Signal Lines Type	For General Signal Lines	BLM03AG p10	Info-tainment	0603 (0201)	10Ω to 1000Ω	
			BLM15AG p30	Info-tainment Power-train	1005 (0402)	10Ω to 1000Ω	
			BLM18AG p66	Info-tainment Power-train	1608 (0603)	120Ω to 1000Ω	
			BLM18AG* (150°C available) p68	Power-train	1608 (0603)	120Ω to 1000Ω	
			BLM18AG* (Conductive glue) p70	Power-train	1608 (0603)	470Ω to 1000Ω	
			BLM21AG p99	Info-tainment Power-train	2012 (0805)	120Ω to 1000Ω	
			BLM21AG* (150°C available) p101	Power-train	2012 (0805)	120Ω to 1000Ω	
		BLM31AJ p114	Power-train	3216 (1206)	600Ω		
		For High Speed Signal Lines	BLM03B p12	Info-tainment	0603 (0201)	10Ω to 600Ω	
			BLM15B p31	Info-tainment Power-train	1005 (0402)	5Ω to 1800Ω	
			BLM18B p72	Info-tainment Power-train	1608 (0603)	5Ω to 2500Ω	
	BLM18B* (150°C available) p77		Power-train	1608 (0603)	47Ω to 2500Ω		
	BLM21B p103		Info-tainment Power-train	2012 (0805)	5Ω to 2700Ω		
	Power Lines Type	BLM03PX* p7	Info-tainment	0603 (0201)	22Ω to 120Ω		
		BLM03PG p6	Info-tainment	0603 (0201)	22Ω to 33Ω		
		BLM15PX* p26	Info-tainment	1005 (0402)	33Ω to 600Ω		
		BLM15PE* p23	Power-train	1005 (0402)	30Ω to 600Ω		
		BLM15PG/PD* p21	Info-tainment	1005 (0402)	10Ω to 120Ω		
		BLM18PG* p50	Info-tainment Power-train	1608 (0603)	30Ω to 470Ω		
		BLM21PG* p90	Info-tainment Power-train	2012 (0805)	22Ω to 330Ω		
		BLM21PG* (150°C available) p92	Power-train	2012 (0805)	22Ω to 330Ω		
		BLM31PG* p107	Info-tainment Power-train	3216 (1206)	33Ω to 600Ω		
		BLM41PG* p115	Info-tainment Power-train	4516 (1806)	60Ω to 1000Ω		
		BLM18KG* (Low DC Resistance Type) p57	Info-tainment Power-train	1608 (0603)	26Ω to 1000Ω		
		BLM18KG* (150°C available) p59	Power-train	1608 (0603)	26Ω to 1000Ω		
		BLM18KG* (Conductive glue) p62	Power-train	1608 (0603)	26Ω to 1000Ω		
		BLM18KN* (175°C available) p64	Power-train	1608 (0603)	26Ω to 1000Ω		
		BLM31KN* p109	Info-tainment Power-train	3216 (1206)	120Ω to 1000Ω		
		BLM31KN* (150°C available) p111	Power-train	3216 (1206)	120Ω to 1000Ω		
		BLM18SG* (Low DC Resistance Type) p52	Info-tainment	1608 (0603)	26Ω to 330Ω		
		BLM18SN* p54	Info-tainment Power-train	1608 (0603)	22Ω		
		BLM18SP* (Low DC Resistance Type) p55	Info-tainment Power-train	1608 (0603)	30Ω to 1000Ω		
		BLM21SN* p94	Info-tainment Power-train	2012 (0805)	30Ω		
		BLM21SP* (Low DC Resistance Type) p95	Info-tainment Power-train	2012 (0805)	70Ω to 1000Ω		
		BLM21SP* (150°C available) p97	Power-train	2012 (0805)	70Ω to 1000Ω		
		BLM31SN* p113	Info-tainment Power-train	3216 (1206)	50Ω		
		BLE18PS* p117	Info-tainment Power-train	1608 (0603)	8.5Ω		
		BLE18PS* (150°C available) p118	Power-train	1608 (0603)	8.5Ω		
		BLE32PN p119	Info-tainment Power-train	3225 (1210)	26Ω to 30Ω		
		For GHz Band Noise	Universal Type [Power Lines / Signal Lines]	BLM03EB* p19	Info-tainment Power-train	0603 (0201)	25Ω to 50Ω
				BLM15EG* p46	Info-tainment Power-train	1005 (0402)	120Ω to 220Ω
				BLM18EG* p87	Info-tainment Power-train	1608 (0603)	100Ω to 600Ω
			Signal Lines Type	BLM18HE* p84	Info-tainment Power-train	1608 (0603)	600Ω to 1500Ω
BLM03HG p18	Info-tainment Power-train			0603 (0201)	600Ω to 1200Ω		
BLM03HD p16	Info-tainment			0603 (0201)	330Ω to 1800Ω		
BLM03HB p15	Info-tainment			0603 (0201)	190Ω to 400Ω		
BLM15HG p43	Info-tainment Power-train			1005 (0402)	600Ω to 1000Ω		
BLM15HG* (150°C available) p44	Power-train			1005 (0402)	600Ω to 1000Ω		
BLM15HD p40	Info-tainment Power-train			1005 (0402)	600Ω to 1800Ω		
BLM15HD* (150°C available) p41	Power-train			1005 (0402)	600Ω to 1800Ω		
BLM15HB p39	Info-tainment Power-train			1005 (0402)	120Ω to 220Ω		

* The derating of rated current is required for some items according to the operating temperature on each product page.

Continued from the preceding page. ↘

		Part Number/Series	Applications	Size Code in mm (in inch)	Impedance at 100MHz
For GHz Band Noise	Signal Lines Type	BLM18HG p86	Info-tainment Power-train	1608 (0603)	470Ω to 1000Ω
		BLM18HD p83	Info-tainment Power-train	1608 (0603)	470Ω to 1000Ω
		BLM18HB p82	Info-tainment	1608 (0603)	120Ω to 330Ω
For High-GHz Band Noise	Signal Lines Type	BLM15GG p49	Info-tainment	1005 (0402)	220Ω to 470Ω
		BLM15GA p48	Info-tainment	1005 (0402)	75Ω
		BLM18GG p89	Info-tainment	1608 (0603)	470Ω
	Universal Type [Power Lines / Signal Lines]	BLM18DN* p80	Info-tainment Power-train	1608 (0603)	150Ω to 600Ω

* The derating of rated current is required for some items according to the operating temperature on each product page.

Frequency Specified Noise Filter	Part Number/Series	Applications	Size Code in mm (in inch)	Target Frequency	Rated Current (mA)
Universal Type [Power Lines / Signal Lines]	BLF03JD* p140	Info-tainment	0603 (0201)	700MHz	480

* The derating of rated current is required for some items according to the operating temperature on each product page.

NF □

Combined Type

	Part Number/Series	Applications	Size Code in mm (in inch)	Cut-off Frequency
Signal Lines Type	NFL18ZT p126	Info-tainment	1608 (0603)	50MHz to 500MHz

Combined Type

	Part Number/Series	Applications	Size Code in mm (in inch)	Capacitance
Universal Type [Power Lines / Signal Lines]	NFE31ZT p124	Info-tainment	3216 (1206)	22pF to 2200pF
	NFE61HT p125	Info-tainment Power-train	6816 (2706)	33pF to 3300pF

Inductor Type

	Part Number/Series	Applications	Size Code in mm (in inch)	Impedance at 1MHz
For LED Lines	NFZ32BW* p132	Info-tainment	3225 (1210)	3.3Ω to 880Ω
	NFZ5BBW* p137	Info-tainment	5050 (2020)	2.9Ω to 140Ω

* The derating of rated current is required for some items according to the operating temperature on each product page.

Inductor Type

	Part Number/Series	Applications	Size Code in mm (in inch)	Impedance at 100MHz
For Audio Lines	NFZ15SF p127	Info-tainment	1005 (0402)	1000Ω
	NFZ18SM* p128	Info-tainment	1608 (0603)	120Ω to 700Ω
	NFZ2MSD* p130	Info-tainment	2016 (0806)	100Ω to 1000Ω

* The derating of rated current is required for some items according to the operating temperature on each product page.

DL □

Common Mode Choke Coils

	Part Number/Series	Applications	Size Code in mm (in inch)	Common Mode Impedance at 100MHz	Common Mode Inductance at 0.1MHz	Common Mode Inductance at 1MHz
For Power Lines	DLW5AT* p157	Info-tainment Power-train	5036 (2014)	45Ω to 1100Ω	-	-
	DLW5BT* p162	Info-tainment Power-train	5050 (2020)	100Ω to 1400Ω	-	-
	DLW5BS p161	Info-tainment	5050 (2020)	500Ω to 800Ω	-	-
	UCMH0907 (Part Number: 1259CM-0001) p168	Info-tainment	9070 (3527)	700Ω	-	-
USB, HDMI, and LVDS, etc.	DLM11SN_HZ2 p146	Info-tainment	1210 (0504)	45Ω to 90Ω	-	-
	DLW21SZ_HQ2 p147	Info-tainment	2012 (0805)	67Ω to 120Ω	-	-
	DLW21SZ_XQ2 p148	Info-tainment	2012 (0805)	180Ω to 490Ω	-	-
	DLW31SH_SQ2 p151	Power-train	3216 (1206)	2200Ω	-	-
SerDes (PoC)	DLW21SH391XQ2* p149	Power-train	2012 (0805)	390Ω	-	-
	DLW21PH201XQ2* p150	Power-train	2012 (0805)	200Ω	-	-
CAN/FlexRay	DLW43SH110XK2 p156	Power-train	4532 (1812)	-	11μH	-
	DLW43SH220XK2 p156	Power-train	4532 (1812)	-	22μH	-
	DLW43SH510XK2 p156	Power-train	4532 (1812)	-	-	51μH
	DLW43SH101XK2 p156	Power-train	4532 (1812)	-	-	100μH
CAN/CAN FD	DLW32SH101XF2 p154	Power-train	3225 (1210)	-	100μH	-
In-vehicle Ethernet (100 Mbps)	DLW32MH_XK2 p152	Power-train	3225 (1210)	-	100μH to 200μH	-
	DLW43MH_XK2 p155	Power-train	4532 (1812)	-	200μH	-
In-vehicle Ethernet (1000 Mbps)	DLW32MH_XT2 p153	Power-train	3225 (1210)	-	80μH to 100μH	-

* The derating of rated current is required for some items according to the operating temperature on each product page.

PL □

Large Current Common Mode
 Choke Coil for Automotive Available

	Part Number/Series	Applications	Size Code in mm (in inch)	Common Mode Impedance at 10MHz
Power Lines Type	PLT10H* p166	Power-train	-	45Ω to 1000Ω
	PLT5BP* p164	Power-train	5050 (2020)	100Ω to 500Ω

* The derating of rated current is required for some items according to the operating temperature on each product page.

BNX

Block EMIFIL

	Part Number/Series	Applications	Height (mm)	Rated Voltage (Vdc)	Rated Current (A)
Power Lines Type	BNX024H01* p174	Power-train	3.5	50	20
	BNX025H01* p174	Power-train	3.5	25	20
	BNX026H01* p174	Power-train	3.5	50	20
	BNX027H01* p174	Power-train	3.5	16	20
	BNX012H01* p178	Power-train	8.5 max.	50	15

* The derating of rated current is required for some items according to the operating temperature on each product page.

● Part Numbering

Chip Ferrite Bead for Automotive

(Part Number)

BL	M	18	AG	102	S	Z	1	D
①	②	③	④	⑤	⑥	⑦	⑧	⑨

① Product ID

Product ID	
BL	Chip Ferrite Beads

② Type

Code	Type
E	DC Bias Characteristics Improved Type
M	Ferrite Bead Single Type

③ Dimensions (LxW)

Code	Dimensions (LxW)	Size Code (inch)
03	0.6x0.3mm	0201
15	1.0x0.5mm	0402
18	1.6x0.8mm	0603
21	2.0x1.25mm	0805
31	3.2x1.6mm	1206
32	3.2x2.5mm	1210
41	4.5x1.6mm	1806

④ Characteristics/Applications

Code *1	Characteristics/Applications
AG	For General Use
AJ

SP	
HG	
EB	For GHz Band High-speed Signal Lines (Low Direct Current Type)
EG	For GHz Band General Use (Low DC Resistance Type)
HB	For GHz Band High-speed Signal Lines
HD	
HE	
GA	For High-GHz Band High-speed Signal Lines
GG	For High-GHz Band General Use
DN	For High-GHz Band General Use (Low Direct Current Type)

*1 Frequency characteristics vary with each code.

⑤ Impedance

Expressed by three figures. The unit is in ohm (Ω) at 100MHz. The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures.

⑥ Electrode

Expressed by a letter.

Ex.)

Code	Electrode
S/F/T/B/J/E	Sn Plating
A	Au Plating
W	Ag/Pd

⑦ Category

Derating of Rated Current

In operating temperature exceeding +85°C, derating of current is necessary for BLM03PX_S□1 series.
Please apply the derating curve shown in chart according to the operating temperature.

Chip Ferrite Bead (BL□ Series) ⚠️Caution/Notice

⚠️Caution

Rating

1. About the Rated Current

Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.

2. About the Excessive Surge Current

Excessive surge current (pulse current or rush current) than specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise. Please contact us in advance in case of applying the surge current.

Soldering and Mounting

Self-heating

Please pay special attention when mounting chip ferrite beads BLM□□AX/P/K/S series chip power beads BLE series in close proximity to other products that radiate heat. The heat generated by other products may deteriorate the insulation resistance and cause excessive heat in this component.

Fail-safe

Be sure to provide an appropriate fail-safe function on your product to prevent a secondary damage occurrence that may be caused by the abnormal function or the failure of our product.

Notice

Storage and Operating Conditions

1. Operating Environment

Do not use products in the corrodible atmosphere such as acidic gases, alkaline gases, chlorine, sulfur gases, organic gases. (the sea breeze, Cl₂, H₂S, NH₃, SO₂, NO₂, etc)
Do not use products in the environment close to the organic solvent.

2. Storage Period

BLM15E/15H/15G series should be used within 12 months, the other series should be used within 6 months. Solderability should be checked if this period is exceeded.

3. Storage Conditions

- (1) Storage temperature: -10 to +40°C
Relative humidity: 15 to 85%
Avoid sudden changes in temperature and humidity.
- (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Continued on the following page. ↗

Chip Ferrite Bead (BL□ Series) ⚠️Caution/Notice

Continued from the preceding page. ↘

Notice (Soldering and Mounting)

1. Soldering

Please mount products by flow or reflow soldering except for BLM_WH1.

2. Mounting on-board with Conductive Glue

BLM_WH1 is designed for conductive glue mounting method. Please contact us for details.

3. Other

Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL may vary, depending on the circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise

suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

- Cracks may occur at the connection of solder (solder fillet portion) due to the difference of the coefficient of thermal expansion from a mounting board when heat stress like heat cycle, etc. are repeatedly given to them. The occurrence of the crack by heat stress may be influenced by the size of a pad, solder volume, heat radiation of mounting board etc., so please pay careful attention to designing when a big change in ambient temperature can be assumed.

Handling

1. Resin Coating

Using resin for coating/molding products may affect the products performance.

So please pay careful attention in selecting resin.

Prior to use, please make the reliability evaluation with the product mounted in your application set.

2. Handling of a Substrate

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.

Excessive mechanical stress may cause cracking in the Product.

3. Mounting Density

Add special attention to radiating heat of products when mounting the inductor near the products with heating. The excessive heat by other products may cause deterioration at joint of this product with substrate.

Cleaning

Following conditions should be observed when cleaning chip ferrite beads.

- Cleaning temperature: 60°C max. (40°C max. for alcohol type cleaner)

(2) Ultrasonic

Output: 20W/liter max.

Duration: 5 minutes max.

Frequency: 28 to 40kHz

(3) Cleaning agent

The following list of cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.

Do not clean BLM18AG□□□WH1 series. Before cleaning, please contact Murata engineering.

- Alcohol cleaning agent

Isopropyl alcohol (IPA)

- Aqueous cleaning agent

Pine Alpha ST-100S

- Ensure that flux residue is completely removed.

Component should be thoroughly dried after aqueous agent has been removed with deionized water.

- BLM□□G type is processed with resin. On rinsing the product, using water for ultrasonic cleaning may affect the resin quality used for the product by water element.

In case of set cleaning conditions, please make sure the reliability according to the cleaning conditions.

For additional cleaning methods, please contact Murata engineering

About Corrosive Gases

Please refrain from use since contact with environments with corrosive gases (sulfur gas [hydrogen sulfide, sulfur dioxide, etc.], chlorine, ammonia, etc.) or oils (cutting oil, silicone oil, etc.) that have come into contact with the previously stated corrosive gas environment will result in deterioration of product quality or an open from deterioration due to corrosion of product electrode, etc.

We will not bear any responsibility for use under these environments.

1	2	3	4	5	6	7	8	9	10

① Product ID

Product ID	
NF	Chip EMIFIL

② Structure

Code	Structure
Z	Inductor Type

③ Dimensions (LxW)

Code	Dimensions (LxW)	Size Code (inch)
15	1.0x0.5mm	0402
18	1.6x0.8mm	0603
2M	2.0x1.6mm	0806
32	3.2x2.5mm	1210
5B	5.0x5.0mm	2020

④ Features

Code	Features
SD	For Audio Lines Metal Alloy Type
SM	For Audio Lines Multilayer Type
SF	For Audio Lines Multilayer Type (For FM Band Use)
BW	For LED Lines Wire Wound Type

⑤ Impedance

Expressed by three figures. The unit is in ohm (Ω). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures.

⑥ Inductance Tolerance

Code	Features
S	For General Use (Sn Plating)
H	For General Use (LF Solder) *1
L	For General Use (LF Solder)

*1 NFZ32BW_H□1 only.

Derating of Rated Current

Chip EMIFIL (NF□ Series) ⚠️Caution/Notice

⚠️Caution

Rating

1. About the Rated Current

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.

2. About the Excessive Surge Current (NFZ Series)

Excessive surge current (pulse current or rush current) than specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise. Please contact us in advance in case of applying the surge current.

Soldering and Mounting

Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure our product.

Notice

Storage and Operating Condition

1. Operating Environment

Do not use products in the corrodible atmosphere such as acidic gases, alkaline gases, chlorine, sulfur gases, organic gases. (the sea breeze, Cl₂, H₂S, NH₃, SO₂, NO₂, etc)
Do not use products in the environment close to the organic solvent.

2. Storage Period

The NF series should be used within 12 months.
Products to be used after this period should be checked for solderability or bondability with glue.

3. Storage Conditions

- (1) Storage temperature: -10 to +40°C
Relative humidity: 15 to 85%
Avoid sudden changes in temperature and humidity.
- (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Soldering

Reliability decreases with improper soldering methods.
Please solder by the standard soldering conditions shown in mounting information.

2. Other

Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL may vary, depending on the

circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Continued on the following page. ↗

Chip EMIFIL (NF□ Series) ⚠Caution/Notice

Continued from the preceding page. ↘

Handling

1. Resin Coating (Except for NFZ Series)

Using resin for coating/molding products may affect the products performance.

So please pay careful attention in selecting resin.

Prior to use, please make the reliability evaluation with the product mounted in your application set.

Resin Coating (NFZ_W Series)

To prevent breaking the wire, avoid touching with sharp material, such as tweezers or other material such as bristles of cleaning brush, to the wire wound portion of this product. To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board. An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resins containing impurities or chloride may possibly.

2. Handling of a Substrate

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.

Excessive mechanical stress may cause cracking in the Product.

Bending

Twisting

Cleaning

Following conditions should be observed when cleaning chip EMI filter.

- (1) Cleaning temperature: 60°C max. (40°C max. for alcohol type cleaner)
- (2) Ultrasonic
Output: 20W/liter max.
Duration: 5 minutes max.
Frequency: 28 to 40kHz
Care should be taken not to cause resonance of the PCB and mounted products.
- (3) Cleaning agent
The following list of cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.

(a) Alcohol cleaning agent
Isopropyl alcohol (IPA)

(b) Aqueous cleaning agent
Pine Alpha ST-100S

- (4) Ensure that flux residue is completely removed.
Component should be thoroughly dried after aqueous agent has been removed with deionized water.

Failure and degradation of a product are caused by the cleaning method. When you clean in conditions that are not in mounting information, please contact Murata engineering.

About Corrosive Gases

Please refrain from use since contact with environments with corrosive gases (sulfur gas [hydrogen sulfide, sulfur dioxide, etc.], chlorine, ammonia, etc.) or oils (cutting oil, silicone oil, etc.) that have come into contact with the previously stated corrosive gas environment will result in deterioration of product quality or an open from deterioration due to corrosion of product electrode, etc. We will not bear any responsibility for use under these environments.

● Part Numbering

Chip Common Mode Choke Coil for Automotive

(Part Number)

DL	W	43	S	H	101	X	K	2	L
①	②	③	④	⑤	⑥	⑦	⑧	⑨	⑩

① Product ID

Product ID	
DL	Chip Common Mode Choke Coils

② Structure

Code	Structure
W	Wire Wound Type

③ Dimensions (LxW)

Code	Dimensions (LxW)	Size Code (inch)
21	2.0x1.2mm	0805
31	3.2x1.6mm	1206
32	3.2x2.5mm	1210
43	4.5x3.2mm	1812
44	4.0x4.0mm	1515
5A	5.0x3.6mm	2014
5B	5.0x5.0mm	2020

④ Features (1)

Code	Type
S	Magnetically Shielded One Circuit Type
T	One Circuit Low Profile Type
M	Magnetically Shielded One Circuit Type (Transfer mode conversion characteristics improved)
U	Non-magnetic One Circuit Type
P	For Power Lines (500mA min)

⑤ Category

Code	Category	
Z	For Automotive	Infotainment
H		Powertrain, Safety

⑥ Impedance

Typical impedance at 100MHz is expressed by three figures. The unit is in ohm (Ω). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures.

⑥ Inductance (DLW43SH)

Expressed by three figures. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures.

⑦ Circuit

Code	Circuit
S	Expressed by a letter.
M	
H	
T	
X	
Y	

⑧ Features (2)

Code	Features
K	Expressed by a letter.
P	
T	
F

Common Mode Choke Coil for Automotive

(Part Number)

PL	T	10H	H	102	6R0	P	N	B
①	②	③	④	⑤	⑥	⑦	⑧	⑨

① Product ID

Product ID	
PL	Common Mode Choke Coils

② Type

Code	Type
T	DC Type

③ Applications

Code	Applications
10H	For DC Line High-frequency Type
5BP	5.0x5.0mm Size, for DC Lines

④ Features (1)

Code	Features	
H	For Automotive	Powertrain, Safety

⑤ Impedance

Expressed by three figures. The unit is ohm (Ω). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures.

⑥ Rated Current

Expressed by three figures. The unit is ampere (A). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures. A decimal point is expressed by the capital letter "R." In this case, all figures are significant digits.

⑦ Features (2)

Code	Features
P	Expressed by a letter.
S	

⑧ Lead Dimensions

Code	Lead Dimensions
N	No Lead Terminal (SMD)

⑨ Packaging

Chip Common Mode Choke Coil (DL□ Series) ⚠️Caution/Notice

⚠️Caution

Rating

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance. Be sure to provide an appropriate fail-safe function on your product to prevent a secondary damage occurrence that may be caused by the abnormal function or the failure of our product.

Soldering and Mounting

1. Self-heating

Please provide special attention when mounting chip common mode choke coils DLW5 series in close proximity to other products that radiate heat. The heat generated by other products may deteriorate the insulation resistance and cause excessive heat in this component.

2. Mounting Direction

Mount Chip Common Mode Choke Coils in right direction. Wrong direction, which is 90 degrees rotated from right

direction, causes not only open or short circuit but also flames or other serious trouble.

Notice

Storage and Operating Condition

1. Operating Environment

Do not use products in the corrodible atmosphere such as acidic gases, alkaline gases, chlorine, sulfur gases, organic gases. (the sea breeze, Cl₂, H₂S, NH₃, SO₂, NO₂, etc)
Do not use products in the environment close to the organic solvent.

2. Storage Period

The DL series should be used within 12 months. Solderability should be checked if this period is exceeded.

3. Storage Conditions

- (1) Storage temperature: -10 to +40°C
Relative humidity: 15 to 85%
Avoid sudden changes in temperature and humidity.
- (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Soldering

Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in mounting information.

2. Other

Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL may vary, depending on the

circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Chip Common Mode Choke Coil (DL□ Series) ⚠️Caution/Notice

Continued from the preceding page. ↘

Handling

- 1. Resin Coating (Except for DLW Series.)**
 Using resin for coating/molding products may affect the products performance.
 So please pay careful attention in selecting resin.
 Prior to use, please make the reliability evaluation with the product mounted in your application set.
- 2. Resin Coating (DLW31S Series)**
 Do not make any resin coating DLW31S series.
 The impedance value may change due to high cure-stress of resin to be used for coating/molding products.
 An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resin contains some impurities or chloride possible to generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of coil, leading to open circuit.
 So, please pay your careful attention in selecting resin in case of coating/molding the products with the resin.
- 3. Resin Coating (Except DLW31S Series)**
 The impedance value may change due to high cure-stress of resin to be used for coating/molding products. An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resin contains some impurities or chloride possible to generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of coil, leading to open circuit.

So, please pay your careful attention in selecting resin in case of coating/molding the products with the resin. Prior to use the coating resin, please make sure no reliability issue is observed by evaluating products mounted on your board.

- 4. Caution for Use (DLW Series)**
 When you hold products with a tweezer, please hold by the sides. Sharp materials, such as a pair of tweezers, should not touch the winding portion to prevent breaking the wire. Mechanical shock should not be applied to the products mounted on the board to prevent breaking the core.
- 5. Brushing (DLW21S/31S/32S/43S/43M Series)**
 When you clean the neighborhood of products such as connector pins, bristles of cleaning brush shall not be touched to the winding portion of this product to prevent the breaking of wire.
- 6. Handling of a Substrate**
 After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate. Excessive mechanical stress may cause cracking in the Product.

Cleaning

Following conditions should be observed when cleaning chip EMI filter.

Do not clean DLW series.

- (1) Cleaning temperature:** 60°C max. (40°C max. for alcohol type cleaner)
- (2) Ultrasonic**
 Output: 20W/liter max.
 Duration: 5 minutes max.
 Frequency: 28 to 40kHz
- (3) Cleaning agent**
 The following list of cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.
 Before cleaning, please contact Murata engineering.

- Alcohol cleaning agent
 Isopropyl alcohol (IPA)
- Aqueous cleaning agent
 Pine Alpha ST-100S

- (4) Ensure that flux residue is completely removed.**
 Component should be thoroughly dried after aqueous agent has been removed with deionized water.
 Failure and degradation of a product are caused by the cleaning method. When you clean in conditions that are not in mounting information, please contact Murata engineering.

About Corrosive Gases

Please refrain from use since contact with environments with corrosive gases (sulfur gas [hydrogen sulfide, sulfur dioxide, etc.], chlorine, ammonia, etc.) or oils (cutting oil, silicone oil, etc.) that have come into contact with the previously stated corrosive gas environment will result in deterioration of product quality or an open from deterioration due to corrosion of product electrode, etc.

We will not bear any responsibility for use under these environments.

Chip Common Mode Choke Coil (PL□ Series) ⚠Caution/Notice

⚠Caution

Rating

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance. Be sure to provide an appropriate

fail-safe function on your product to prevent a secondary damage occurrence that may be caused by the abnormal function or the failure of our product.

Soldering and Mounting

1. Self-heating

Please provide special attention when mounting chip common mode choke coils in close proximity to other products that radiate heat. The heat generated by other products may deteriorate the insulation resistance and cause excessive heat in this component.

2. Mounting Direction

Mount Chip Common Mode Choke Coils in right direction.

Wrong direction, which is 90 degrees rotated from right direction, causes not only open or short circuit but also flames or other serious trouble.

Notice

Storage and Operating Condition

1. Operating Environment

Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas. Do not use products in the environment close to the organic solvent.

2. Storage Period

PLT10H series, PLT5BP series should be used within 12 months. Solderability should be checked if this period is exceeded.

3. Storage Conditions

- (1) Storage temperature: -10 to +40°C
Relative humidity: 15 to 85%
Avoid sudden changes in temperature and humidity.
- (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Soldering

Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in mounting information.

2. Other

Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL may vary, depending on the

circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Derating of Rated current

● Rating

In operating temperatures exceeding +85°C, derating of current is necessary for BNX012H series. Please apply the derating curve shown in chart according to the operating temperature.

● Connecting ± Power Line

In case of using ± power line, please connect to each terminal as shown.

Block Type EMIFIL Lead Type (BNX Series) ⚠️Caution/Notice

⚠️Caution

Rating

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.

Fail-safe

Be sure to provide an appropriate fail-safe function on your product to prevent a secondary damage occurrence that may be caused by the abnormal function or the failure of our product.

Notice

Storage and Operating Conditions

1. Operating Environment

- (1) Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
- (2) Do not use products near water, oil or organic solvents.

2. Storage Period

- BNX Series should be used within 12 months.
Solderability should be checked if this period is exceeded.

3. Storage Conditions

- (1) Storage temperature: -10 to +40°C
Relative humidity: 15 to 85%
Avoid sudden changes in temperature and humidity.
- (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Soldering

- Reliability decreases with improper soldering methods.
Please solder by the standard soldering conditions shown in mounting information.

2. Other

- Noise suppression levels resulting from Murata's EMI suppression filters "EMIFIL" may vary, depending on the

circuits and ICs used, type of noise, mounting pattern, lead wire length, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Notice (Appearance)

Although some part of the product surface seems to be white in some cases, do not become alarmed as it is the result of a waxing process for humidity resistance improvement. This wax does not impede mechanical performance, electrical performance, or reliability of the product.

Continued on the following page. ↗

Block Type EMIFIL Lead Type (BNX Series) ⚠Caution/Notice

Continued from the preceding page. ↘

Cleaning

Clean the block Type EMIFIL (Lead Type) in the following conditions.

- (1) Cleaning temperature should be limited to 60°C max. (40°C max for alcohol type cleaner).
- (2) Ultrasonic cleaning should comply with the following conditions, avoiding the resonance phenomenon at the mounted products and P.C.B.
Power: 20W/liter max.
Frequency: 28 to 40kHz
Time: 5 min. max.
- (3) Cleaner
 - (a) Alcohol type cleaner
Isopropyl alcohol (IPA)
 - (b) Aqueous agent
Pine Alpha ST-100S

- (4) There should be no residual flux or residual cleaner left after cleaning.

In the case of using aqueous agent, products should be dried completely after rinsing with de-ionized water in order to remove the cleaner.

- (5) The surface of products may become dirty after cleaning, but there is no deterioration on mechanical, electrical characteristics and reliability.
- (6) Other cleaning: Please contact us.

About Corrosive Gases

Please refrain from use since contact with environments with corrosive gases (sulfur gas [hydrogen sulfide, sulfur dioxide, etc.], chlorine, ammonia, etc.) or oils (cutting oil, silicone oil, etc.) that have come into contact with the previously stated corrosive gas environment will result in

deterioration of product quality or an open from deterioration due to corrosion of product electrode, etc. We will not bear any responsibility for use under these environments.

Microchip Transformer (Balun) (DX□ Series) ⚠️Caution/Notice

⚠️Caution

Rating

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.

Soldering and Mounting

1. Self-heating

Please provide special attention when mounting chip Micro Chip Transformer (DXW) series in close proximity to other products that radiate heat. The heat generated by other products may deteriorate the insulation resistance and cause excessive heat in this component.

2. Mounting Direction

Mount Micro Chip Transformer in right direction. Wrong direction, which is 90 degree rotated from right direction,

the characteristics does not come out as Micro Chip Transformer or causes not only open or short circuit but also flames or other serious trouble.

Notice

Storage and Operating Conditions

1. Operating Environment

Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

2. Storage Period

DXW series should be used within 12 months. Solderability should be checked if this period is exceeded.

3. Storage Conditions

- (1) Storage temperature: -10 to +40 degree C
 Relative humidity: 15 to 85%
 Avoid sudden changes in temperature and humidity.
- (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Handling

1. Resin Coating

The impedance value may change due to high cure-stress of resin to be used for coating/molding products. An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resin contains some impurities or chloride possible to generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of coil, leading to open circuit. So, please pay your careful attention in selecting resin in case of coating/molding the products with the resin. Prior to use the coating resin, please make sure no reliability issue is observed by evaluating products mounted on your board.

2. Handling of a Substrate

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate. Excessive mechanical stress may cause cracking in the Product.

Cleaning

Do not clean.

Continued on the following page. ↗

Microchip Transformer (Balun) (DX□ Series) ⚠️Caution/Notice

Continued from the preceding page. ↘

About Corrosive Gases

Please refrain from use since contact with environments with corrosive gases (sulfur gas [hydrogen sulfide, sulfur dioxide, etc.], chlorine, ammonia, etc.) or oils (cutting oil, silicone oil, etc.) that have come into contact with the previously stated corrosive gas environment will result in deterioration of product quality or an open from deterioration due to corrosion of product electrode, etc. We will not bear any responsibility for use under these environments.

Product Guide

● Part Numbering

Inductors for Power Lines for Automotive

(Part Number)

LQ	M	21	P	Z	R54	M	G	0	D
①	②	③	④	⑤	⑥	⑦	⑧	⑨	⑩

① Product ID

Product ID	
LQ	Chip Inductors (Chip Coils)

② Structure

Code	Structure
H	Wire Wound Type (Ferrite Core)
M	Multilayer Type (Ferrite Core)
W	Wire Wound Type (Ferrite Core)

③ Dimensions (LxW)

Code	Nominal Dimensions (LxW)	Size Code (in inch)
18	1.6x0.8mm	0603
21	2.0x1.25mm or 2.0x1.2mm	0805
2M	2.0x1.6mm	0806
2H	2.5x2.0mm	1008
3N	3.0x3.0mm	1212
32	3.2x2.5mm	1210
43	4.5x3.2mm	1812
44	4.0x4.0mm	1515
5B	5.0x5.0mm	2020

④ Applications and Characteristics

Code	Series	Applications and Characteristics
D	LQH	for Choke
C		for Choke (Coating Type)
P	LQM/LQH	for Power Line
F	LQW	for Choke

⑤ Category

Code	Series	Category	
Z	LQH/LQM	Automotive	Infotainment
H			Powertrain/Safety
T	LQW	Standard Type	

⑥ Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry (μ H). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures. If there is a decimal point, it is expressed by the capital letter "R." In this case, all figures are significant digits. If inductance is less than 0.1 μ H, the inductance code is expressed by a combination of two figures and the capital letter "N," and the unit of inductance is nano-henry (nH). The capital letter "N" indicates the unit of "nH," and also expresses a decimal point. In this case, all figures are significant digits. For those products whose inductance values are specified using three designated digits, these values may be indicated using the closest two digits instead.

⑦ Inductance Tolerance

Code	Inductance Tolerance
K	$\pm 10\%$
M	$\pm 20\%$
N	$\pm 30\%$

⑧ Features (Except for LQH□□P/LQM□□P)

Code	Features	Series
0	Standard Type	LQW
2	Standard Type	LQH32C/32D
3	Low DC Resistance	
5	Low Profile Type	LQM21D
7	High Current Type	

⑨ Thickness

(LQH□□P/LQM□□P Only • Except for LQH43P)

Code	Nominal Dimensions (T)
C	0.5mm
D	0.6mm
E	0.7mm
F	0.8mm
G	0.9mm
J	1.1mm
M	1.4mm
N	1.55mm
T	2.0mm

⑩ Electrode (Except for LQH□□P/LQM□□P)

•Lead (Pb) Free

Code	Electrode	Series
0	Sn	LQM
3	LF Solder	LQH
H	Automotive Powertrain/Safety	LQW

⑪ Specification

(LQH□□P/LQM□□P Only • Except for LQH43P)

Code	Specification
O/S	Standard Type
C	Good Bias Current Characteristics Type
H/E	High Spec Type (Low DC Resistance; Good Bias Current Characteristics Type)
R	Low DC Resistance Type

Operating temp.range (Self-temp.rise included): -40 to 125°C

Absolute maximum voltage: 10Vdc

Inductance:

Measured with an LCR meter 4284A (Keysight) or equivalent.

RDC:

Measured with a Resistance Hitester 3541 (HIOKI) or equivalent.

Only for reflow soldering

*Isat: Rated Current based on Inductance change

*Itemp: Rated Current based on Temperature rise

Rated current (Isat) is specified when the decrease of the initial inductance value at 30%.

Rated current (Itemp) is specified when temperature of the inductor is raised 40°C by DC current.

Class of Magnetic Shield: Metal Alloy

*Isat: Rated Current based on Inductance change

*Itemp: Rated Current based on Temperature rise

Rated current (Isat) is specified when the decrease of the initial inductance value at 30%. Rated current (Itemp) is specified when temperature of the inductor is raised 40°C by DC current.

Keep the temperature (ambient temperature plus self-generation of heat) under 150°C. It can be considered for use with DCDC converters with a maximum voltage of 40 V or less.

DFE252012PD-100M□	—	10μH ±20%	1MHz	1100mA	800mA	0.53Ω

Operating temp.range (Self-temp.rise included): -40 to 125°C

Absolute maximum voltage: 20Vdc

Inductance:

Measured with an LCR meter 4284A (Keysight) or equivalent.

RDC:

Measured with a Resistance Hitester 3541 (HIOKI) or equivalent.

Only for reflow soldering

*Isat: Rated Current based on Inductance change

*Itemp: Rated Current based on Temperature rise

Rated current (Isat) is specified when the decrease of the initial inductance value at 30%.

Rated current (Itemp) is specified when temperature of the inductor is raised 40°C by DC current.

Class of Magnetic Shield: Metal Alloy

*Isat: Rated Current based on Inductance change

*Itemp: Rated Current based on Temperature rise

Rated current (Isat) is specified when the decrease of the initial inductance value at 30%. Rated current (Itemp) is specified when temperature of the inductor is raised 40°C by DC current.

Keep the temperature (ambient temperature plus self-generation of heat) under 150°C. It can be considered for use with DCDC converters with a maximum voltage of 40 V or less.

*Isat: Rated Current based on Inductance change

*Itemp: Rated Current based on Temperature rise

*S.R.F: Self Resonant Frequency

When rated current is applied to the products, inductance will be within ±30% of initial inductance value range. Keep the temperature (ambient temperature plus self-generation of heat) under 125°C. When rated current is applied to the products, temperature rise caused by self-generated heat shall be limited to 40°C max (ambient temperature 85°C max). When rated current is applied to the products, temperature rise caused by self-generated heat shall be limited to 20°C max (ambient temperature 85°C to 105°C).

 *S.R.F: Self Resonant Frequency

When rated current is applied to the products, inductance will be within ±30% of nominal inductance value. When rated current is applied to the products, temperature rise caused by self-generated heat shall be limited to 40°C max(ambient temperature 85°C max). When rated current is applied to the products, temperature rise caused by self-generated heat shall be limited to 20°C max(ambient temperature 85°C to 105°C). Keep the temperature (ambient temperature plus self-generation of heat) under 125°C.

Only for reflow soldering

*Isat: Rated Current based on Inductance change

*Itemp: Rated Current based on Temperature rise

*S.R.F: Self Resonant Frequency

When rated current is applied to the products, inductance will be within ±30% of initial inductance value range. Keep the temperature (ambient temperature plus self-generation of heat) under 125°C. When rated current is applied to the products, temperature rise caused by self-generated heat shall be limited to 40°C max (ambient temperature 85°C max). When rated current is applied to the products, temperature rise caused by self-generated heat shall be limited to 20°C max (ambient temperature 85°C to 105°C).

Rating

1. About the Rated Current

Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.

For the usage of powertrain and safety be sure to provide an appropriate fail-safe function on your product to prevent a secondary damage occurrence that may be caused by the abnormal function or the failure of our product.

2. About Excessive Surge Current

Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit or burnout caused by excessive temperature rise.

Please contact us in advance with surge current related questions.

Notice

Soldering and Mounting

This product is designed to be mounted by soldering. If you want to use other mounting methods, such as using a conductive adhesive, please consult us beforehand. Also, if repeatedly subjected to temperature cycles or other thermal stress, due to the difference in the coefficient of thermal expansion with the mounting substrate, the solder (solder fillet part) in the mounting part may crack. The occurrence of cracks due to thermal stress is affected by the size of the land where mounted, the solder volume, and the heat dissipation of the mounting substrate. Care should be used when a large change in ambient temperature is a possibility.

Storage and Operating Condition

1. Operating Environment

Do not use products in chemical atmosphere such as chlorine gas, acid or sulfide gas.

2. Storage Period

LQM series should be used within 6 months; the other products should be used within 12 months. Check solderability if this period is exceeded.

3. Storage Conditions

- (1) Store products in a warehouse in compliance with the following conditions:
Temperature: -10 to +40°C.
Humidity: 15 to 85% (relative humidity)

Do not subject products to rapid changes in temperature and humidity.

Do not store them in chemical atmosphere such as one containing sulfurous acid gas or alkaline gas. This will prevent electrode oxidation, which causes poor solderability and possible corrosion of inductors.

- (2) Do not store products in bulk packaging to prevent collision among inductors, which causes core chipping and wire breakage.
- (3) Store products on pallets to protect from humidity, dust, etc.
- (4) Avoid heat shock, vibration, direct sunlight, etc.

Continued on the following page. ↗

Inductors for Power Lines (LQ Series) ⚠Caution/Notice

Continued from the preceding page. ↘

Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.

LQH_D/G/J/M/N/P/T/P_26 Series

- To prevent breaking the wire, avoid touching with sharp material, such as tweezers or the bristles of a cleaning brush, to the wire wound portion of this product.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.
- Temperature may rise up to max. 40°C when applying the rated current to Inductors for Power Lines. Be careful of the temperature rating of the circuit board and components around the chip Inductors.

LQM Series

- There is the possibility that magnetism may change the inductance value. Do not use a magnet or tweezers with magnetism when handling chip inductors. (The tip of the tweezers should be molded with resin or pottery.)
- When the excessive current over rated current is applied, it may cause the inductance value to change due to magnetism.

<Transportation>

Do not apply excessive vibration or mechanical shock to products.

<Resin Coating>

When coating products with resin, the relatively high resin curing stress may change inductance values. For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set.

(LQH Series)

An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating conditions, etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating conditions, causing corrosion of the inductor wire and leading to an open circuit.

Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

- (1) Cleaning temperature: 60°C max. (40°C max. for alcohol cleaning agents)
- (2) Ultrasonic
Output: 20W/l max.
Duration: 5 minutes max.
Frequency: 28 to 40kHz
Care should be taken not to cause resonance of the PCB and mounted products.

<Rated Current>

(LQH2HP_JR Series • LQH44P_GR Series)

Inductance will be more than the value, which is 30% down from minimum rated Inductance value.

(Other LQH_P Series)

Inductance will be within $\pm 30\%$ of nominal Inductance value.

<Based on Temperature Rise>

For LQH_P series, rated current is set to keep temperature rise caused by self heating 40°C or less.

For other Inductors for Power Lines, please refer to individual specifications.

<Handling of a Substrate>

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate, or tightening a screw to the substrate.

Excessive mechanical stress may cause cracking in the Product.

<About Corrosive Gases>

Please refrain from use since contact with environments with corrosive gases (sulfur gas [hydrogen sulfide, sulfur dioxide, etc.], chlorine, ammonia, etc.) or oils (cutting oil, silicone oil, etc.) that have come into contact with the previously stated corrosive gas environment will result in deterioration of product quality or an open from deterioration due to corrosion of product electrode, etc. We will not bear any responsibility for use under these environments.

(3) Cleaning agent

The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.

- (a) Alcohol cleaning agents
Isopropyl alcohol (IPA)
- (b) Aqueous cleaning agents
Pine Alpha ST-100S

(4) Ensure that flux residue is completely removed.

Component should be thoroughly dried after aqueous agents have been removed with deionized water.

For additional cleaning methods, please contact Murata.

Inductors for Power Lines (except for LQ Series) ⚠️Caution/Notice

⚠️Caution

Rating

1. About the Rated Current

Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.

Be sure to provide an appropriate fail-safe function on your product to prevent a secondary damage occurrence that may be caused by the abnormal function or the failure of our product.

2. About Excessive Surge Current

Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit or burnout caused by excessive temperature rise. Please contact us in advance in case with any surge current related questions.

Notice

Soldering and Mounting

This product is designed to be mounted by soldering. If you want to use other mounting methods, such as using a conductive adhesive, please consult us beforehand.

Metal alloy inductor product*

Metal alloy inductor product* employs a core with low insulation resistance compared to conventional ferrite coils, so that please pay strict attention with usage.

Metal alloy inductor product*:

DFE201612P_D, DFE252012P_D, DFE2HCAH_J0,
DFE2MCAH_J0, DFE322520F_D

- Do not make any through holes and copper pattern under the coil. except a copper pattern to the electrode.
- Design/mount any components not to contact this product.

For reflow soldering, pre-heating should be in such a way that the temperature difference between solder and product surface is limited to 100°C max. Cooling into solvent after soldering also should be in such a way that the temperature difference is limited to 100°C max. Insufficient pre-heating may cause cracks on the product, resulting in the deterioration of product quality.

Handling

1. Resin Coating

The inductance value may change and/or it may impact the product's performance due to high cure-stress of resin to be used for coating / molding products. So please pay careful attention when you select resin. Prior to use, please make the reliability evaluation with the product mounted in your application set.

- ##### 2. Temperature Rating of the Circuit Board with components mounted may see a temperature rise up to max. 40°C when applying the rated current to the products.
- Be careful of the temperature rating of the circuit board and components.

3. Caution for Use

There is possibility that the Impedance value may change due to magnetism. Don't use a magnet or a pair of tweezers with magnetism when chip coils are handled. (The tip of the tweezers should be molded with resin or pottery.)

4. Magnetic Saturation

When the excessive current or overrated current is applied, the impedance value may change due to magnetism.

5. Handling of a Substrate

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening the screw to the substrate.

Excessive mechanical stress may cause cracking in the product.

Continued on the following page. ↗

Inductors for Power Lines (except for LQ Series) ⚠Caution/Notice

Continued from the preceding page. ↘

6. About Corrosive Gases

Please refrain from use since contact with environments with corrosive gases (sulfur gas [hydrogen sulfide, sulfur dioxide, etc.], chlorine, ammonia, etc.) or oils (cutting oil, silicone oil, etc.) that have come into contact with the previously stated corrosive gas environment will result in deterioration of product quality or an open from deterioration due to corrosion of product electrode, etc. We will not bear any responsibility for use under these environments.

7. Storage and Handling Requirements

(1) Storage period

Use the products within 6 months after delivered.
Solderability should be checked if this period is exceeded.

(2) Storage conditions

- Products should be stored in the warehouse with the following conditions.
Temperature: -10 to 40°C
Humidity: 15 to 85% relative humidity No rapid change with temperature and humidity.

Don't keep products in corrosive gases such as sulfur, chlorine gas or acid, or it may cause oxidization of electrode, resulting in poor solderability.

- Products should not be stored on bulk packaging condition to prevent the chipping of the core and the breaking of winding wire caused by the collision between the products.
- Products should be stored on the palette for the prevention of the influence from humidity, dust, etc.
- Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.

(3) Handling condition

Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.

⑤ Category

Code	Category	
H	Automotive	Powertrain/Safety
Z	Automotive	Infotainment

⑥ Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures. If there is a decimal point, it is expressed by the capital letter "R." In this case, all figures are significant digits. If inductance is less than $0.1\mu\text{H}$, the inductance code is expressed by a combination of two figures and the capital letter "N," and the unit of inductance is nano-henry (nH). The capital letter "N" indicates the unit of "nH," and also expresses a decimal point. In this case, all figures are significant digits. For those products whose inductance values are specified using three designated digits, these values may be indicated using the closest two digits instead.

Packaging

Code	Packaging	Minimum Quantity
=P3	ø330mm Embossed Taping	750

Features

- 6.5×5.9×6.0(H) mm MAX.
- Supported inductance range: 0.05 to 2.7μH
- High reliability that conforms to automotive standards
- Operating temperature range: -40°C to +85°C

Applications

- Ideal for use as RF matching transformers for car tuners

Packaging

Code	Packaging	Minimum Quantity
=P3	ø330mm Embossed Taping	1000

Features

- 5.8×5.8×5.5(H) mm MAX.
- Supported inductance range: 0.1 to 52mH (1 to 7 mH for corner sensor applications)
- Resistant to mechanical stress
- Operating temperature range
 - Up to 20 mH (-40°C to +105°C)
 - 20 mH or more (-40°C to +85°C)
- Various reliability conditions guaranteed for 1,000 hours (evaluation performed up to 3,000 hours)
- Lead coplanarity guaranteed within 0.1 mm

Inductors for General Circuits (LQ Series) ⚠️Caution/Notice

⚠️Caution

Rating

1. About the Rated Current

Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.

For the usage of powertrain and safety be sure to provide an appropriate fail-safe function on your product to prevent a secondary damage occurrence that may be caused by the abnormal function or the failure of our product.

2. About Excessive Surge Current

Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit or burnout caused by excessive temperature rise.

Please contact us in advance with any surge current related questions.

Notice

Mounting Conditions

These products are designed to be mounted by soldering. If you want to use other mounting methods, such as using a conductive adhesive, please consult us beforehand.

Also, if repeatedly subjected to temperature cycles or other thermal stress, due to the difference in the coefficient of thermal expansion with the mounting substrate, the solder (solder fillet part) in the mounting part may crack.

The occurrence of cracks due to thermal stress is affected by the size of the land where mounted, the solder volume, and the heat dissipation of the mounting substrate.

Care should be used when a large change in ambient temperature is assumed.

Check the mounting condition before using. Using mounting conditions (nozzles, equipment conditions, etc.) that are not suitable for products may lead to pick up errors, misalignment, or damage to the product

Storage and Operating Condition

1. Operating Environment

Do not use products in chemical atmosphere such as chlorine gas, acid or sulfide gas.

2. Storage Period

Products should be used within 12 months.
Check solderability if this period is exceeded.

3. Storage Conditions

(1) Store products in a warehouse in compliance with the following conditions:
Temperature: -10 to +40 degrees C.
Humidity: 15 to 85% (relative humidity)

Do not subject products to rapid changes in temperature and humidity.

Do not store them in chemical atmosphere such as one containing sulfurous acid gas or alkaline gas. This will prevent electrode oxidation, which causes poor solderability and possible corrosion of inductors.

- (2) Do not store products in bulk packaging to prevent collision among inductors, which causes core chipping and wire breakage.
- (3) Store products on pallets to protect from humidity, dust, etc.
- (4) Avoid heat shock, vibration, direct sunlight, etc.

Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.

LQH series

• To prevent breaking the wire, avoid touching with sharp material, such as tweezers or the bristles of a cleaning brush, to the wire wound portion of this product.

• To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.

<Transportation>

Do not apply excessive vibration or mechanical shock to products.

Continued on the following page. ↗

Inductors for General Circuits (LQ Series) ⚠Caution/Notice

Continued from the preceding page. ↘

<Resin Coating>

When coating products with resin, the relatively high resin curing stress may change inductance values. For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set. (LQH series)

An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating conditions, etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating conditions, causing corrosion of the inductor wire and leading to an open circuit.

<Handling of a Substrate>

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate, or tightening a screw to the substrate. Excessive mechanical stress may cause cracking in the Product.

About Corrosive Gases

Please refrain from use since contact with environments with corrosive gases (sulfur gas [hydrogen sulfide, sulfur dioxide, etc.], chlorine, ammonia, etc.) or oils (cutting oil, silicone oil, etc.) that have come into contact with the previously stated corrosive gas environment will result in deterioration of product quality or an open from deterioration due to corrosion of product electrode, etc. We will not bear any responsibility for use under these environments.

Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

- (1) Cleaning temperature: 60°C max. (40°C max. for alcohol cleaning agents)
- (2) Ultrasonic
Output: 20W/l max.
Duration: 5 minutes max.
Frequency: 28 to 40kHz
Care should be taken not to cause resonance of the PCB and mounted products.

(3) Cleaning agent

The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.

- (a) Alcohol cleaning agents
Isopropyl alcohol (IPA)
- (b) Aqueous cleaning agents
Pine Alpha ST-100S

(4) Ensure that flux residue is completely removed.

Component should be thoroughly dried after aqueous agents have been removed with deionized water. For additional cleaning methods, please contact Murata.

Inductors for General (except for LQ Series) ⚠️Caution/Notice

⚠️Caution

Rating

1. About the Rated Current

Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.

Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

2. About Excessive Surge Current

Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise. Please contact us in advance in case of applying the surge current.

Notice

Soldering and Mounting

If repeatedly subjected to temperature cycles or other thermal stress, due to the difference in the coefficient of thermal expansion with the mounting substrate, the solder (solder fillet part) in the mounting part may crack.

The occurrence of cracks due to thermal stress is affected by the size of the land where mounted, the solder volume, and the heat dissipation of the mounting substrate.

Care should be used when a large change in ambient temperature is a possibility.

Check the mounting condition before using. Using mounting conditions (nozzles, equipment conditions, etc.) that are not suitable for products may lead to pick up errors, misalignment, or damage to the product.

(1) The part must be pre-heated before soldering if reflow is applied.

The difference between pre-heat temperature and soldering temperature must be within 150°C.

(2) If a soldering iron is applied, the soldering process must be completed within 3 seconds at a soldering temperature lower than 350°C.

The tip of the soldering iron must not touch the terminal electrode in this process.

(3) Terminals should not be handled with fingers. This is to prevent deterioration in solderability.

(4) Soldering using a soldering iron must be done only once for each part.

(5) PCB mount: this part must be handled with care to minimize any physical stress to the part at the board assembly process.

(6) To minimize the influence to the part, the thickness of PCB, land dimension, and the amount of solder must be evaluated carefully by individual application.

(7) If a washing process is applied, please make sure there is no problem with operating.

(8) Products should not be dropped on the floor. This is to prevent damage to the products.

(9) Although electrical performance is satisfactory, audible noises may be made if audio frequency ingredient is contained in current.

Before using, please make sure there aren't any problem with operating.

Handling

<Storage and Handling Requirements>

(1) Storage period

Use the products within 6 months after delivered.

Solderability should be checked if this period is exceeded

(2) Storage conditions

• Products should be stored in the warehouse on the following conditions.

Temperature: -10 to 40°C

Humidity: 15 to 85% relative humidity No rapid change on temperature and humidity

Don't keep products in corrosive gases such as sulfur, chlorine gas or acid, or it may cause oxidization of electrode, resulting in poor solderability.

• Products should not be stored on bulk packaging condition to prevent the chipping of the core and the breaking of winding wire caused by the collision between the products.

• Products should be stored on the palette for the prevention of the influence from humidity, dust and so on.

• Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.

(3) Handling condition

Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.

Continued on the following page. ↗

RF Inductors for Automotive

(Part Number)

LQ	G	15	H	H	1N0	S	0	2	D
①	②	③	④	⑤	⑥	⑦	⑧	⑨	⑩

① Product ID

Product ID	
LQ	Chip Inductors (Chip Coils)

② Structure

Code	Structure
G	Multilayer Type (Air-core Inductors (Coils))
H	Wire Wound Type (Ferrite Core)
P	Film Type
W	Wire Wound Type (Air-core Inductors (Coils))

③ Dimensions (LxW)

Code	Nominal Dimensions (LxW)	Size Code (in inch)
03	0.6x0.3mm	0201
15	1.0x0.5mm	0402
18	1.6x0.8mm	0603
31	3.2x1.6mm	1206

④ Applications and Characteristics

Code	Series	Applications and Characteristics
H	LQG	Multilayer Air-core Inductors (Coils)
W		High Q Type
T	LQP	Film Type (Low DC Resistance Type)
A	LQW	High Q Type (UHF-SHF)
C		for Choke (Coating Type)
H	LQH	for High-frequency Resonant Circuit

⑤ Category

Code	Series	Category	
N	LQP/LQW	Standard Type	
S	LQW		
Z	LQG/LQH	Automotive	Infotainment
H	LQG		Powertrain/Safety

⑥ Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures. If there is a decimal point, it is expressed by the capital letter "R." In this case, all figures are significant digits. If inductance is less than $0.1\mu\text{H}$, the inductance code is expressed by a combination of two figures and the capital letter "N," and the unit of inductance is nano-henry (nH). The capital letter "N" indicates the unit of "nH," and also expresses a decimal point. In this case, all figures are significant digits. For those products whose inductance values are specified using three designated digits, these values may be indicated using the closest two digits instead.

⑦ Inductance Tolerance

Code	Inductance Tolerance
B	$\pm 0.1\text{nH}$
C	$\pm 0.2\text{nH}$
D	$\pm 0.5\text{nH}$
G	$\pm 2\%$
H	$\pm 3\%$
J	$\pm 5\%$
K	$\pm 10\%$
S	$\pm 0.3\text{nH}$

⑧ Features

Notice(Rating)

In operating temperatures exceeding +85°C, derating of current is necessary for this series.

Please apply the derating curve shown in the chart according to the operating temperature.

Derating of Rated Current

Notice(Rating)

In operating temperatures exceeding +85°C, derating of current is necessary for this series.

Please apply the derating curve shown in the chart according to the operating temperature.

Derating of Rated Current

RF Inductors ⚠Caution/Notice

⚠Caution

Rating

1. About the Rated Current

Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.

For the usage of powertrain and safety be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

2. About Excessive Surge Current

Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise.

Please contact us in advance in case of applying the surge current.

Notice

Soldering and Mounting

LQG,LQP,LQW series are designed to be mounted by soldering. If you want to use other mounting method, for example, using a conductive adhesive, please consult us beforehand.

Also, if repeatedly subjected to temperature cycles or other thermal stress, due to the difference in the coefficient of thermal expansion with the mounting substrate, the solder (solder fillet part) in the mounting part may crack.

The occurrence of cracks due to thermal stress is affected by the size of the land where mounted, the solder volume, and the heat dissipation of the mounting substrate.

Carefully design it when a large change in ambient temperature is assumed.

Check the mounting condition before using. Using mounting conditions (nozzles, equipment conditions, etc.) that are not suitable for products may lead to pick up errors, misalignment, or damage to the product.

Storage and Operating Condition

1. Operating Environment

Do not use products in chemical atmosphere such as chlorine gas, acid or sulfide gas.

2. Storage Period

LQG series should be used within 6 months; the other products should be used within 12 months.

Check solderability if this period is exceeded.

3. Storage Conditions

(1) Store products in a warehouse in compliance with the following conditions:

Temperature: -10 to +40 degrees C.

Humidity: 15 to 85% (relative humidity)

Do not subject products to rapid changes in temperature and humidity.

Do not store them in chemical atmosphere such as one containing sulfurous acid gas or alkaline gas.

This will prevent electrode oxidation, which causes poor solderability and possible corrosion of inductors.

(2) Do not store products in bulk packaging to prevent collision among inductors, which causes core chipping and wire breakage.

(3) Store products on pallets to protect from humidity, dust, etc.

(4) Avoid heat shock, vibration, direct sunlight, etc.

(5) Products should be stored under the airtight packaged condition. (LQG Series)

Continued on the following page. ↗

RF Inductors ⚠Caution/Notice

Continued from the preceding page. ↘

Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.

LQW_A/C series

- To prevent breaking the wire, avoid touching with sharp material, such as tweezers or the bristles of a cleaning brush, to the wire wound portion.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.
- In some mounting machines, when picking up components, a support pin pushes the components up from the bottom of the base tape. In this case, please remove the support pin. The support pin may damage the components and break the wire.
- In rare cases, the laser recognition cannot recognize this component. Please contact us when you use laser recognition. (There is no problem with the permeation and reflection type.) (LQW15A Series only)

<Transportation>

Do not apply excessive vibration or mechanical shock to products.

<Resin Coating>

When coating products with resin, the relatively high resin curing stress may change inductance values. For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set.

(LQW series)

An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating conditions, etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating conditions, causing corrosion of the inductor wire and leading to an open circuit.

(LQP series)

When products are coated with resin, please contact us in advance.

About Corrosive Gases

Please refrain from use since contact with environments with corrosive gases (sulfur gas [hydrogen sulfide, sulfur dioxide, etc.], chlorine, ammonia, etc.) or oils (cutting oil, silicone oil, etc.) that have come into contact with the previously stated corrosive gas environment will result in

<Handling of a Substrate>

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate, or tightening a screw to the substrate.

Excessive mechanical stress may cause cracking in the Product.

Substrate Restriction (LQP Series)

- Don't mount on FPC (Flexible printed circuits)
- When components are mounted on substrate of under 6-layers, please contact us in advance. To mount components on FPC or substrate of under 6-layers may cause of cracking issue by stress.

(1) There is a possibility of chip cracking caused by PCB expansion/contraction with heat, because stress on a chip is different depending on PCB material and structure.

When the thermal expansion coefficient greatly differs between the board used for mounting and the chip, it will cause cracking of the chip due to the thermal expansion and contraction.

The chip is assumed to be mounted on the PCB of glass-epoxy material, and we don't test with other PCB material which has different thermal expansion coefficient from Glass-epoxy.

When other PCB materials are considered, please be sure to evaluate by yourself.

(2) After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate. Excessive mechanical stress may cause cracking in the product.

In case of the mounting on flexible PCB, there is a possibility of chip cracking caused by mechanical stress even from small bending or twisting. When the flexible PCB is considered, please be sure to evaluate by yourself.

deterioration of product quality or an open from deterioration due to corrosion of product electrode, etc. We will not bear any responsibility for use under these environments.

Continued on the following page. ↗

RF Inductors ⚠️Caution/Notice

Continued from the preceding page. ↘

Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

- (1) Cleaning Temperature: 60°C max. (40°C max. for alcohol cleaning agents)
- (2) Ultrasonic
 - Output: 20W/l max.
 - Duration: 5 minutes max.
 - Frequency: 28 to 40kHz
 - Care should be taken not to cause resonance of the PCB and mounted products.

(3) Cleaning agent

The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.

- (a) Alcohol cleaning agents
 - Isopropyl alcohol (IPA)
- (b) Aqueous cleaning agents
 - Pine Alpha ST-100S

(4) Ensure that flux residue is completely removed.

Component should be thoroughly dried after aqueous agents have been removed with deionized water.

For additional cleaning methods, please contact Murata.

Measuring Method

Measuring Method of Inductance/Q

1. Residual elements and stray elements of test fixtures can be described by F-parameter as shown in the following:

2. The impedance of chip Inductors (chip coils) Z_x and measured value Z_m can be described by input/output current/voltage.

$$Z_m = \frac{V_1}{I_1}, \quad Z_x = \frac{V_2}{I_2}$$

3. Thus, the relation between Z_x and Z_m is shown in the following:

$$Z_x = \alpha \frac{Z_m - \beta}{1 - Z_m \Gamma}$$

where, $\alpha = D / A = 1$
 $\beta = B / D = Z_{sm} - (1 - Y_{om} Z_{sm}) Z_{ss}$
 $\Gamma = C / A = Y_{om}$

Z_{sm} : measured impedance of short chip
 Z_{ss} : residual impedance of short chip*
 Y_{om} : measured admittance when opening the fixture

*Residual inductance of short chip

Residual Inductance	Series
0nH	LQG15H, LQG18HH
0.480nH	LQP03TN
0.556nH	LQG15W, LQW15A/C
0.771nH	LQH31H, LQW18AN/C

4. L_x and Q_x should be calculated with the following equation.

$$L_x = \frac{\text{Im}(Z_x)}{2\pi f}, \quad Q_x = \frac{\text{Im}(Z_x)}{\text{Re}(Z_x)}$$

L_x : Inductance of chip Inductors (chip coils)
 Q_x : Q of chip Inductors (chip coils)
 f : Measuring frequency

Please contact us for LQW18AS_0Z because residual inductance value is defined by each part number.

⚠ Note

1 Export Control

For customers outside Japan:

Murata requests customers to ensure that no Murata products are used or sold, through any channels, for use in the design, development, production, utilization, maintenance or operation of, or otherwise contribution to Weapons of Mass Destruction (nuclear, chemical or biological weapons or missiles), conventional weapons, or items specially designed for them.

For customers in Japan:

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

2 Please contact our sales representatives or product engineers before using the products in this catalog for the applications listed below, which require especially high reliability for the prevention of defects which might directly damage a third party's life, body or property, or when one of our products is intended for use in applications other than those specified in this catalog.

- ① Aircraft equipment
- ② Aerospace equipment
- ③ Undersea equipment
- ④ Power plant equipment
- ⑤ Medical equipment
- ⑥ Transportation equipment (vehicles, trains, ships, etc.)
- ⑦ Traffic signal equipment
- ⑧ Disaster prevention / crime prevention equipment
- ⑨ Data-processing equipment
- ⑩ Application of similar complexity and/or reliability requirements to the applications listed above

3 Product specifications in this catalog are as of May 2021. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering. If there are any questions, please contact our sales representatives or product engineers.

4 Please read rating and ⚠CAUTION (for storage, operating, rating, soldering, mounting and handling) in this catalog to prevent smoking and/or burning, etc.

5 This catalog has only typical specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

6 Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or a third party's intellectual property rights and other related rights in consideration of your use of our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.

7 No ozone depleting substances (ODS) under the Montreal Protocol are used in our manufacturing process.
