Risk Assessment

It is important for the users of this product to understand that the hazards of SVHC substances do **NOT** simply equal the hazards of Articles that contain SVHC substances. The hazards of Articles shall be concluded based on the EU's Risk Assessment, which mainly considers exposure routes and frequency of SVHCs from Articles.

DEHP

The risk of this product for human health is considered to be low, as DEHP, added as plasticizer, is bound within the polymer matrix. Several risk assessment reports show the extraction amount of DEHP from polymer product was below the detection limits and suggest that the highest exposure scenario is oral exposure of infants to DEHP caused by putting the polymer product into mouths (mouthing) and chewing.

Handling Instructions

No special handling techniques are required when working with the SVHC containing product. Use the product as recommended per the applicable product specification and do not consume food or drink while handling the product.

DEHP

DEHP, when contained in the polymer product, is bound within the polymer matrix. As a result, only minimal amounts come in contact with human skin, even with regular and prolonged contact with the article. In addition, there is no evidence that DEHP will absorb through the skin in a significant way.

Disposal Instructions

Dispose of the article by following all of the applicable governmental regulations that are relevant to your geographic location.
