¹⁾ In a cascade each downstream safety switch increases the response time of the system. Other response times see operating instructions.

²⁾ Response time on approach to the enable zone.

³⁾ Detection time for internal oder external faults (e.g., short-circuit or cross-circuit of output signal switching devices). Follow the detailed information in the operating instructions.

⁴⁾ The stated time applies for one sensor after application of the supply voltage to the safety switch. In case of a cascade 0.1 s must be added per sensor. For uniquely coded or permanently coded sensors 0.5 s must be added additionally per taught-in actuator.

Sensor with cable

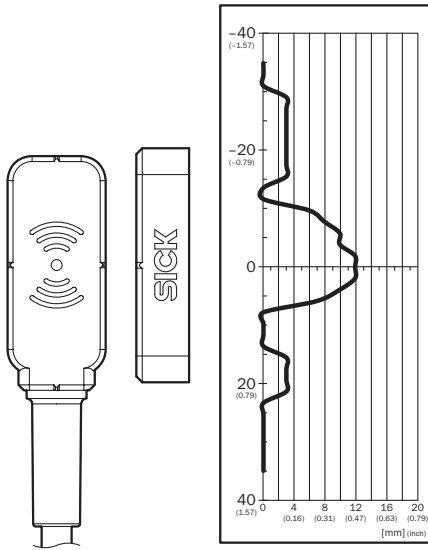

“Mini” actuator

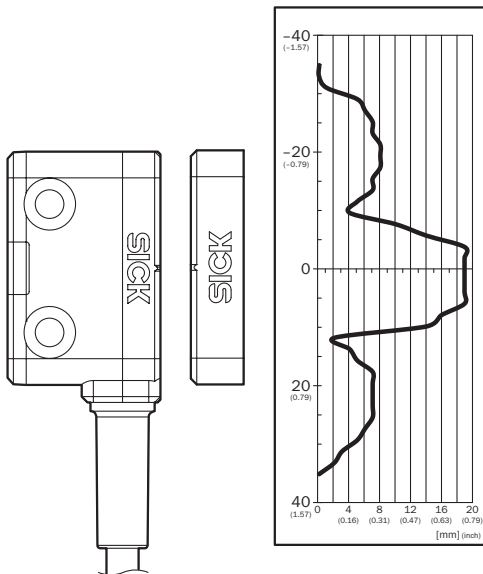

Response range

“Flat”/“Mini” actuator, active side sensor surface

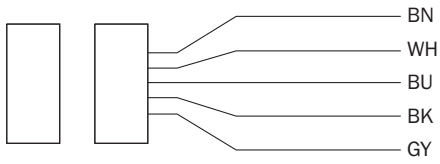

Safe switch on distance S_{A0} 9 mm. Pay attention to boundary areas in case of parallel approach: If the actuator moves laterally in relation to the surface of the sensor, a minimum distance of 4 mm must be maintained. This distance will prevent premature triggering due to the side approach areas.

“Flat”/“Mini” actuator, active front sensor surface

Safe switch on distance S_{A0} 14 mm. Pay attention to boundary areas in case of parallel approach: If the actuator moves laterally in relation to the surface of the sensor, a minimum distance of 10 mm must be maintained. This distance will prevent premature triggering due to the side approach areas.
