Features

NFL18ST_X series is an EMI suppression filter for high speed signal lines, achieving T-type structure with non-magnefic horizontal coils and feed-thrugh capacitor in 1.6x0.8mm size with Murata's multilayer technology, which has good noise suppression effect at the frequency range from 800MHz to several GHz.

Features (NFL18ST_X series)

- Steep insertion loss characteristics realize excellent noise suppression and prevent distortion of signal waveform.
- 2. By minimizing stray capacitance of inductor, achieves high performance in noise suppression in high frequency range.
- 3. Three different values of cut-off frequency are available, ranging from 200MHz up to 500MHz.
- 4. Since all side electrode structures are the same, it is easy to mount.

Applications

- Noise suppression for video signal lines (RGB lines) and high speed clock lines
- 2. EMI suppression at high frequency range (over 800MHz)
