FPF2411 — IntelliMAX™ 6 V / 6 A - Rated Bi-Directional Switch with Slew Rate Control and RCB

Features

- Capability: 6 V
- Low R_{ON}
 - 10 mΩ at 5 V at PWRA or PWRB (Typ.)
 - 12 mΩ at 3.8 V at PWRA or PWRB (Typ.)
- Maximum Current Capability: 6 A (Bi-Directional)
- Ultra-Low I_Q : <1 μA
- Active LOW Control Pin
- 2 ms Long Slew Rate
- Reverse Current Blocking (RCB) during OFF
- Robust ESD Capability:
 - 5 kV HBM, 2 kV CDM
 - 15 kV Air Discharge
 - 8 kV Contact Discharge Under IEC 61000-4-2

Description

The FPF2411 is a 6 V / 6 A-rated bi-directional load switch, consisting of a slew-rate-controlled, low-on-resistance, P-channel MOSFET switch with protection features. The slew-rate-controlled turn-on characteristic prevents inrush current and the resulting excessive voltage droop on the input power rails. The input voltage range operates from 2.3 V to 5.5 V.

Bi-directional switching allows reverse current from V_{OUT} to V_{IN} . The switching is controlled by active-LOW logic input the ONB pin. The FPF2411 is capable of interfacing directly with low-voltage control signal General-Purpose Input / Output (GPIO).

The FPF2411 is available in 12-bump, 1.235 mm x 1.625 mm Wafer-Level Chip-Scale Package (WLCSP) with 0.4 mm pitch.

Applications

- Smartphone / Tablet PC
- Mobile Devices
- Portable Media Devices

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Operation and Application Description

The PPF2411 is an ultra-low- R_{ON} P-channel load switch with bi-directional controlled turn-on and Reverse Current Blocking (RCB). The core is a 12 m Ω P-channel MOSFET and controller capable of functioning over a wide input operating range of 2.3 V to 5.5 V. The ONB pin, active-LOW; controls the state of the switch. RCB functionality blocks unwanted reverse current during OFF states by power switch isolation between PWRA and PWRB.

Inrush Current

Inrush current occurs when the device is turned on. Inrush current is dependent on output capacitance and slew rate control capability, as expressed by:

$$I_{INRUSH} = C_{OUT} \times \frac{V_{IN} - V_{INITIAL}}{t_R} + I_{LOAD}$$

where:

C_{OUT} : Output capacitance;

t_R : Slew rate or rise time at V_{OUT} ;

V_{IN} : Input voltage;

$V_{INITIAL}$: Initial voltage at C_{OUT} , usually GND; and

I_{LOAD} : Load current.

Higher inrush current causes higher input voltage drop, depending on the distributed input resistance and input capacitance. High inrush current can cause problems.

PPF2411 has a 3 ms of slew rate capability under 4.2 V_{IN} at 1 μ F of C_{OUT} and 10 Ω of R_L . Inrush current can be minimized and no input voltage drop appears, as shown in Figure 16.

Reverse-Current Blocking

The reverse-current blocking feature protects the input source against current flow from output to input when the load switch is off by changing the internal body diode direction.

Bypass Capacitor

To limit the voltage drop on the input supply caused by transient inrush current when the switch turns on into a discharged load capacitor; a capacitor must be placed between the PWRA or PWRB and GND pins. A ceramic capacitor of at least 1 μ F placed close to the pins is usually sufficient.

Board Layout

For best performance, all traces should be as short as possible. To be most effective, the input and output capacitors should be placed close to the device to minimize the effect that parasitic trace inductance on normal and short-circuit operation. Using wide traces or large copper planes for all pins (PWRA, PWRB, ONB, and GND) minimizes the parasitic electrical effects and the case-to-ambient thermal impedance.

WLCSP Packing - Embossed Tape

FPF2411BUCX Pin1 at 1 o'clock Rev0

Packing Description:

WLCSP products are classified under Moisture Sensitive Level 1 and are packed in moisture barrier bag for added protection.

The carrier tape is made from dissipative polystyrene or polycarbonate resin. The cover tape is a multilayer film primarily composed of polyester film, adhesive layer, heat activated sealant, and anti-static sprayed agent. These reeled parts in standard option are shipped with 3000 units per 178 mm diameter reel. Up to three reels are packed in each intermediate box. The reels is made of polystyrene plastic (anti-static coated or intrinsic).

These full reels are individually barcode labeled and placed inside a pizza box made of recyclable corrugated brown paper with a Fairchild logo printing. The reel is packed single reel in the pizza box. And these pizza boxes are placed inside a barcode labeled shipping box which comes in different sizes depending on the number of parts shipped.
