HS6000 Kevlar Cutters

A new unique shear action cutter with revolutionary features!

The need for tools that can meet ever smaller and more precise applications of all types continues to increase. In addition, the requirement to properly work with materials with unique or special characteristics continues to increase as well. In order to meet these demands, Lindstrom introduces a new shear action cutter – the HS6000.

Features & Benefits

The HS6000 is primarily designed to cut tough Kevlar elements used in fiber optic and other types of cables. It features high carbon steel blades with a hardness of 57-59 HRc, serrations on one edge to prevent the material being cut from sliding away and a precision screw joint for long life.

User friendly while optimizing durability and precision, the HS6000 fits comfortably in either hand while its ESD safe non-slip grips provide cushioning and a secure grasp.

Ideal for many other applications such as cutting insulation, cables, ties and corded material of all types. The HS6000 is a true multi-purpose cutter!
