Mission time

- notice

20 Years
The PFH value is applicable for the combinations listed in the table for contact load (K) (current through enabling paths) and switching cycle number ( n -op/y) In case of 365 operating days per year and a 24 -hour operation, this results in the specified switching cycle times (t-cycle) for the relay contacts.
Diverging applications on request.

## notice

Inductive loads (e.g. contactors, relays, etc.) are to be suppressed by means of a suitable circuit.

Button $A$ and $B: 1$ NC contact / 1 NO contact (note: the NC contact of the buttons $A$ and $B$ must be opened, before the NO contact closes. No overlapping contacts to avoid triggering of fuse F1 und F2).
Relay outputs: Suitable for 2 channel control, for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.
$(\mathrm{H} 2)=$ Feedback circuit
The control recognises cross-short, cable break and earth leakages in the monitoring circuit.
Simultaneity monitoring 0,5 seconds
The wiring diagram is shown for the de-energised condition.
