采用薄型小外形尺寸晶体管封装 (SOT) 的 LM2840/LM2841/LM2842/LM2840-Q1/LM2841-Q1/LM2842-Q1 100/300/600mA 42V 输入降压直流至直流 (DC/DC) 稳压器

查询样品: LM2841, LM2842

特性

- **LM2840Q，LM2841-Q1 和 LM2842-Q1** 是符合 **AEC-Q100 1** 级标准的汽车级产品（**-40°C** 至 **+125°C** 工作结温范围）
- **4.5V** 至 **42V** 的输入电压范围
- **100mA，300mA** 和 **600mA** 的输出电流选项
- **0.765V** 的反馈引脚电压
- **550kHz (X)** 或 **1.25MHz (Y)** 开关频率
- 低关断 I_Q，典型值 **16μA**
- 短路保护
- 内部补偿
- 软启动电路
- 小型总体解决方案尺寸（**SOT-6L** 封装）

应用

- 电池供电类设备
- 工业配电应用
- 便携式媒体播放器
- 便携式手持仪器

说明

LM2840，LM2841 和 LM2842 是脉宽调制 (PWM) DC/DC 降压稳压器。 借助于 4.5V-42V 的宽输入电压范围，它们适用于诸如非稳压源功率调节等的广泛应用。 为了实现最大效率（典型值 85%），它们特有一个低 R_{DSON}（典型值 0.9Ω）内部开关。 工作频率固定在 550kHz（X 版本）和 1.25MHz（Y 版本）上，这样在仍能具有低输出电压纹波的同时允许使用小型外部组件。 可使用具有一个外部 RC 电路的关断引脚来执行软启动，这样用户能够使软启动时间适应特定应用的需要。

LM2840，LM2841 和 LM2842 分别针对高达 100mA，300mA 和 600mA 的负载电流进行了优化。它们都具有一个 0.765V 的标称反馈电压值。

额外特性包括：热关断，$V_{输入}$欠压闭锁和栅极驱动欠压闭锁。 LM2840，LM2841 和 LM2842 采用薄型 SOT-6L 封装。

典型应用电路

引脚说明

引脚	名称	功能
1	CB	SW 场效应晶体管 (FET) 栅极偏置电压。 在 CB 和 SW 之间连接 $C_{引导}$电容器。
2	GND	接地连接。
3	FB	反馈引脚：将反馈分压器的电压比设定为 $V_{输出} = V_{FB}(1+(R1/R2))$。 为了避免输入偏置误差，电阻器的大小应该在 100-10K 范围内。
4	$\overline{SHDN}$	逻辑电平关断输入。 拉至接地 (GND) 来禁用器件，拉高电平来启用器件。 如果未使用这个功能，接至 $V_{输入}$或保持断开。
5	$V_{输入}$	电源输入电压引脚：4.5V 至 42V 标称工作范围。
6	SW	功率 FET 输出：连接至电感器、二极管和 $C_{引导}$电容器。

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings (1)(2)

V_{IN}		-0.3V to +45V
$\overline{SHDN}$		-0.3V to (V_{IN}+0.3V) <45V
SW Voltage		-0.3V to +45V
CB Voltage above SW Voltage		7V
FB Voltage		-0.3V to +5V
Maximum Junction Temperature		150°C
Power Dissipation (3)		Internally Limited
Lead Temperature		300°C
Vapor Phase (60 sec.)		215°C
Infrared (15 sec.)		220°C
ESD Susceptibility (4)	Human Body Model	2 kV

(1) Absolute maximum ratings are limits beyond which damage to the device may occur. Operating Ratings are conditions for which the device is intended to be functional, but device parameter specifications may not be ensured. For ensured specifications and test conditions, see the Electrical Characteristics.
(2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.
(3) The maximum allowable power dissipation is a function of the maximum junction temperature, T_J(MAX), the junction-to-ambient thermal resistance, θ_{JA}, and the ambient temperature, T_A. The maximum allowable power dissipation at any ambient temperature is calculated using: P_D (MAX) = ($T_{J(MAX)}$ − T_A)/θ_{JA}. Exceeding the maximum allowable power dissipation will cause excessive die temperature, and the regulator will go into thermal shutdown. Internal thermal shutdown circuitry protects the device from permanent damage. Thermal shutdown engages at T_J=175°C (typ.) and disengages at T_J= 155°C (typ).
(4) Human Body Model, applicable std. JESD22-A114-C.

Operating Conditions

Operating Junction Temperature Range (1)	−40°C to +125°C
Storage Temperature	−65°C to +150°C
Input Voltage V_{IN}	4.5V to 42V
SW Voltage	Up to 42V

(1) All limits specified at room temperature (standard typeface) and at temperature extremes (bold typeface). All room temperature limits are 100% production tested. All limits at temperature extremes are ensured via correlation using standard Statistical Quality Control (SQC) methods. All limits are used to calculate Average Outgoing Quality Level (AOQL).

Electrical Characteristics

Specifications in standard type face are for T_J = 25°C and those with **boldface type** apply over the full **Operating Temperature Range** (T_J = −40°C to +125°C). Minimum and Maximum limits are specified through test, design, or statistical correlation. Typical values represent the most likely parametric norm at T_J = +25°C, and are provided for reference purposes only. Unless otherwise stated the following conditions apply: V_{IN} = 12V.

Symbol	Parameter	Conditions	Min (1)	Typ (2)	Max (1)	Units
I_Q	Quiescent current	$\overline{SHDN}$ = 0V		16	**40**	µA
		Device On, Not Switching		1.30	**1.75**	mA
		Device On, No Load		1.35	**1.85**	
R_{DSON}	Switch ON resistance	See (3)		0.9	**1.6**	Ω
I_{LSW}	Switch leakage current	V_{IN} = 42V		0.0	**0.5**	µA
I_{CL}	Switch current limit	LM2840 (4)		525	**900**	mA
		LM2841 (4)		525	**900**	mA
		LM2842 (4)		1.15	**1.7**	A
I_{FB}	Feedback pin bias current	LM2840/41/42 (5)		0.1	**1.0**	µA
V_{FB}	FB Pin reference voltage		**0.747**	0.765	**0.782**	V

(1) All limits specified at room temperature (standard typeface) and at temperature extremes (bold typeface). All room temperature limits are 100% production tested. All limits at temperature extremes are ensured via correlation using standard Statistical Quality Control (SQC) methods. All limits are used to calculate Average Outgoing Quality Level (AOQL).
(2) Typical numbers are at 25°C and represent the most likely norm.
(3) Includes the bond wires, R_{DSON} from V_{IN} pin to SW pin.
(4) Current limit at 0% duty cycle. May be lower at higher duty cycle or input voltages below 6V.
(5) Bias currents flow into pin.

Electrical Characteristics (continued)

Specifications in standard type face are for T_J = 25°C and those with **boldface type** apply over the full **Operating Temperature Range** (T_J = −40°C to +125°C). Minimum and Maximum limits are specified through test, design, or statistical correlation. Typical values represent the most likely parametric norm at T_J = +25°C, and are provided for reference purposes only. Unless otherwise stated the following conditions apply: V_{IN} = 12V.

Symbol	Parameter	Conditions	Min (1)	Typ (2)	Max (1)	Units

OPERATION

PROTECTION

The LM2840/1/2 has dedicated protection circuitry running during normal operation to protect the IC. The thermal shutdown circuitry turns off the power device when the die temperature reaches excessive levels. The UVLO comparator protects the power device during supply power startup and shutdown to prevent operation at voltages less than the minimum input voltage. A gate drive (CB) under-voltage lockout is included to ensure that there is enough gate drive voltage to drive the MOSFET before the device tries to start switching. The LM2840/1/2 also features a shutdown mode decreasing the supply current to approximately 16 µA.

CONTINUOUS CONDUCTION MODE

The LM2840/1/2 contains a current-mode, PWM buck regulator. A buck regulator steps the input voltage down to a lower output voltage. In continuous conduction mode (when the inductor current never reaches zero at steady state), the buck regulator operates in two cycles. The power switch is connected between V_{IN} and SW. In the first cycle of operation the transistor is closed and the diode is reverse biased. Energy is collected in the inductor and the load current is supplied by C_{OUT} and the rising current through the inductor. During the second cycle the transistor is open and the diode is forward biased due to the fact that the inductor current cannot instantaneously change direction. The energy stored in the inductor is transferred to the load and output capacitor. The ratio of these two cycles determines the output voltage. The output voltage is defined approximately as: $D=V_{OUT}/V_{IN}$ and D' = (1-D) where D is the duty cycle of the switch. D and D' will be required for design calculations.

DESIGN PROCEDURE

This section presents guidelines for selecting external components.

SETTING THE OUTPUT VOLTAGE

The output voltage is set using the feedback pin and a resistor divider connected to the output as shown on the front page schematic. The feedback pin voltage 0.765V, so the ratio of the feedback resistors sets the output voltage according to the following equation: $V_{OUT}=0.765V(1+(R1/R2))$

Typically R2 will be given as 100Ω-10 kΩ for a starting value. To solve for R1 given R2 and V_{OUT} use $R1=R2((V_{OUT}/0.765V)-1)$.

INPUT CAPACITOR

A low ESR ceramic capacitor (C_{IN}) is needed between the V_{IN} pin and GND pin. This capacitor prevents large voltage transients from appearing at the input. Use a 2.2 µF-10 µF value with X5R or X7R dielectric. Depending on construction, a ceramic capacitor's value can decrease up to 50% of its nominal value when rated voltage is applied. Consult with the capacitor manufacturer's data sheet for information on capacitor derating over voltage and temperature.

INDUCTOR SELECTION

The most critical parameters for the inductor are the inductance, peak current, and the DC resistance. The inductance is related to the peak-to-peak inductor ripple current, the input and the output voltages.

$$L = \frac{(V_{IN} - V_{OUT})V_{OUT}}{V_{IN} \times I_{RIPPLE} \times f_{SW}} \quad (1)$$

A higher value of ripple current reduces inductance, but increases the conductance loss, core loss, and current stress for the inductor and switch devices. It also requires a bigger output capacitor for the same output voltage ripple requirement. A reasonable value is setting the ripple current to be 30% of the DC output current. Since the ripple current increases with the input voltage, the maximum input voltage is always used to determine the inductance. The DC resistance of the inductor is a key parameter for the efficiency. Lower DC resistance is available with a bigger winding area. A good tradeoff between the efficiency and the core size is letting the inductor copper loss equal 2% of the output power. See AN-1197 SNVA038 for more information on selecting inductors. A good starting point for most applications is a 10 µH to 22 µH with 1.1A or greater current rating for the LM2842 or a 0.7A or greater current rating for the LM2840/41. Using such a rating will enable the LM2840/1/2 to current limit without saturating the inductor. This is preferable to the LM2840/1/2 going into thermal shutdown mode and the possibility of damaging the inductor if the output is shorted to ground or other longterm overload.

OUTPUT CAPACITOR

The selection of C_{OUT} is driven by the maximum allowable output voltage ripple. The output ripple in the constant frequency, PWM mode is approximated by: $V_{RIPPLE} = I_{RIPPLE}(ESR+(1/(8f_{SW}C_{OUT})))$ The ESR term usually plays the dominant role in determining the voltage ripple. Low ESR ceramic capacitors are recommended. Capacitors in the range of 22 µF-100 µF are a good starting point with an ESR of 0.1Ω or less.

BOOTSTRAP CAPACITOR

A 0.15 µF ceramic capacitor or larger is recommended for the bootstrap capacitor (C_{BOOT}). For applications where the input voltage is less than twice the output voltage a larger capacitor is recommended, generally 0.15 µF to 1 µF to ensure plenty of gate drive for the internal switches and a consistently low R_{DSON}.

SOFT-START COMPONENTS

The LM2840/1/2 has circuitry that is used in conjunction with the $\overline{SHDN}$ pin to limit the inrush current on start-up of the DC/DC switching regulator. The $\overline{SHDN}$ pin in conjunction with a RC filter is used to tailor the soft-start for a specific application. When a voltage applied to the $\overline{SHDN}$ pin is between 0V and up to 2.3V it will cause the cycle by cycle current limit in the power stage to be modulated for minimum current limit at 0V up to the rated current limit at 2.3V. Thus controlling the output rise time and inrush current at startup. The resistor value should be selected so the current sourced into the $\overline{SHDN}$ pin will be greater then the leakage current of the $\overline{SHDN}$ pin (1.5 µA) when the voltage at $\overline{SHDN}$ is equal or greater then 2.3V.

SHUTDOWN OPERATION

The $\overline{SHDN}$ pin of the LM2840/1/2 is designed so that it may be controlled using 2.3V or higher logic signals. If the shutdown function is not to be used the $\overline{SHDN}$ pin may be tied to V_{IN}. The maximum voltage to the $\overline{SHDN}$ pin should not exceed 42V. If the use of a higher voltage is desired due to system or other constraints it may be used, however a 100 kΩ or larger resistor is recommended between the applied voltage and the $\overline{SHDN}$ pin to protect the device.

SCHOTTKY DIODE

The breakdown voltage rating of the diode (D1) is preferred to be 25% higher than the maximum input voltage. The current rating for the diode should be equal to the maximum output current for best reliability in most applications. In cases where the duty cycle is greater than 50%, the average diode current is lower. In this case it is possible to use a diode with a lower average current rating, approximately (1-D)I_{OUT}, however the peak current rating should be higher than the maximum load current. A 0.5A to 1A rated diode is a good starting point.

LAYOUT CONSIDERATIONS

To reduce problems with conducted noise pick up, the ground side of the feedback network should be connected directly to the GND pin with its own connection. The feedback network, resistors R1 and R2, should be kept close to the FB pin, and away from the inductor to minimize coupling noise into the feedback pin. The input bypass capacitor C_{IN} must be placed close to the V_{IN} pin. This will reduce copper trace resistance which effects input voltage ripple of the IC. The inductor L1 should be placed close to the SW pin to reduce EMI and capacitive coupling. The output capacitor, C_{OUT} should be placed close to the junction of L1 and the diode D1. The L1, D1, and C_{OUT} trace should be as short as possible to reduce conducted and radiated noise and increase overall efficiency. The ground connection for the diode, C_{IN}, and C_{OUT} should be as small as possible and tied to the system ground plane in only one spot (preferably at the C_{OUT} ground point) to minimize conducted noise in the system ground plane. For more detail on switching power supply layout considerations see Application Note AN-1149: *Layout Guidelines for Switching Power Supplies* SNVA021.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

OTHER QUALIFIED VERSIONS OF LM2840, LM2840-Q1, LM2841, LM2841-Q1, LM2842, LM2842-Q1 :

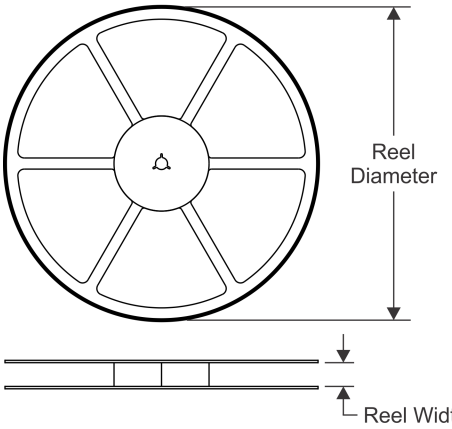
- Catalog: LM2840, LM2841, LM2842
- Automotive: LM2840-Q1, LM2841-Q1, LM2842-Q1

NOTE: Qualified Version Definitions:

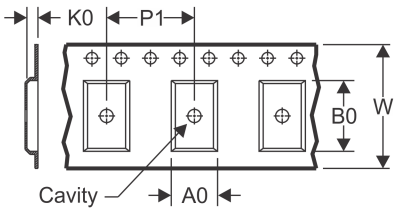
- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects

TAPE AND REEL INFORMATION

REEL DIMENSIONS

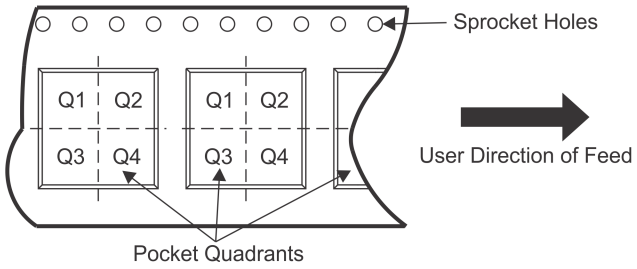


TAPE DIMENSIONS



A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE



*All dimensions are nominal

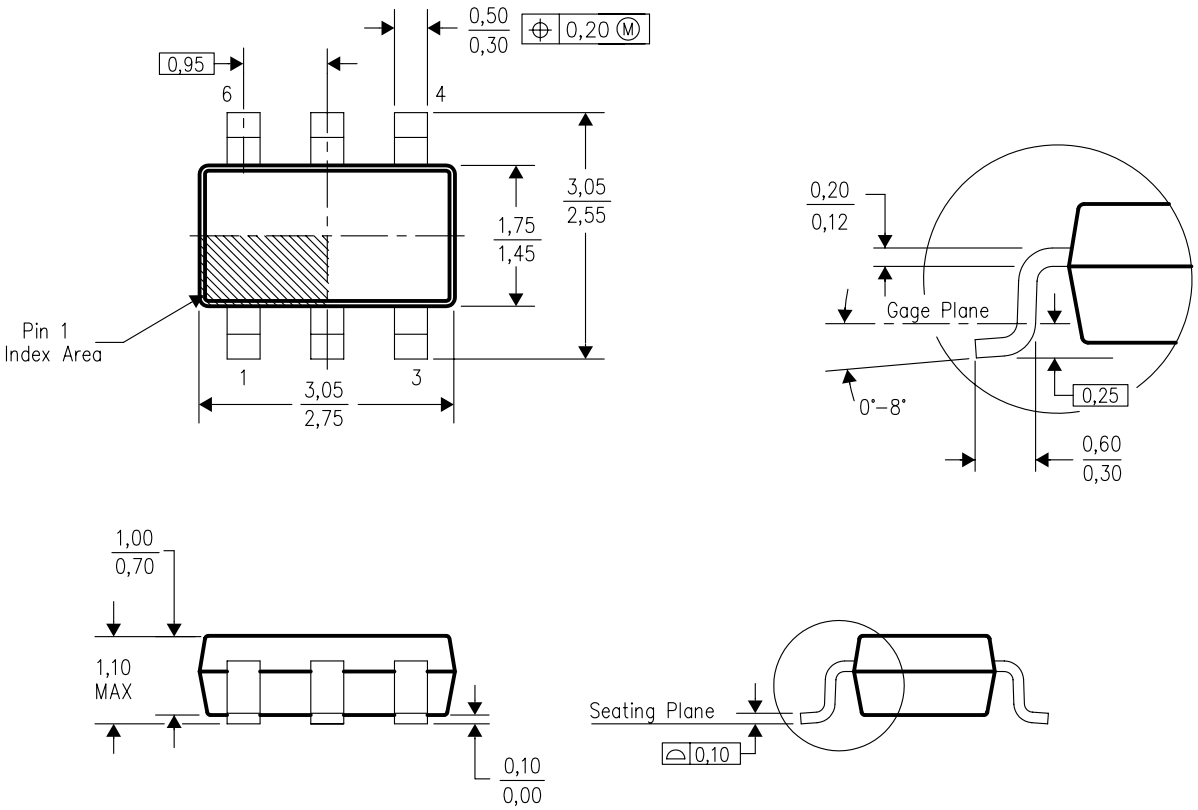
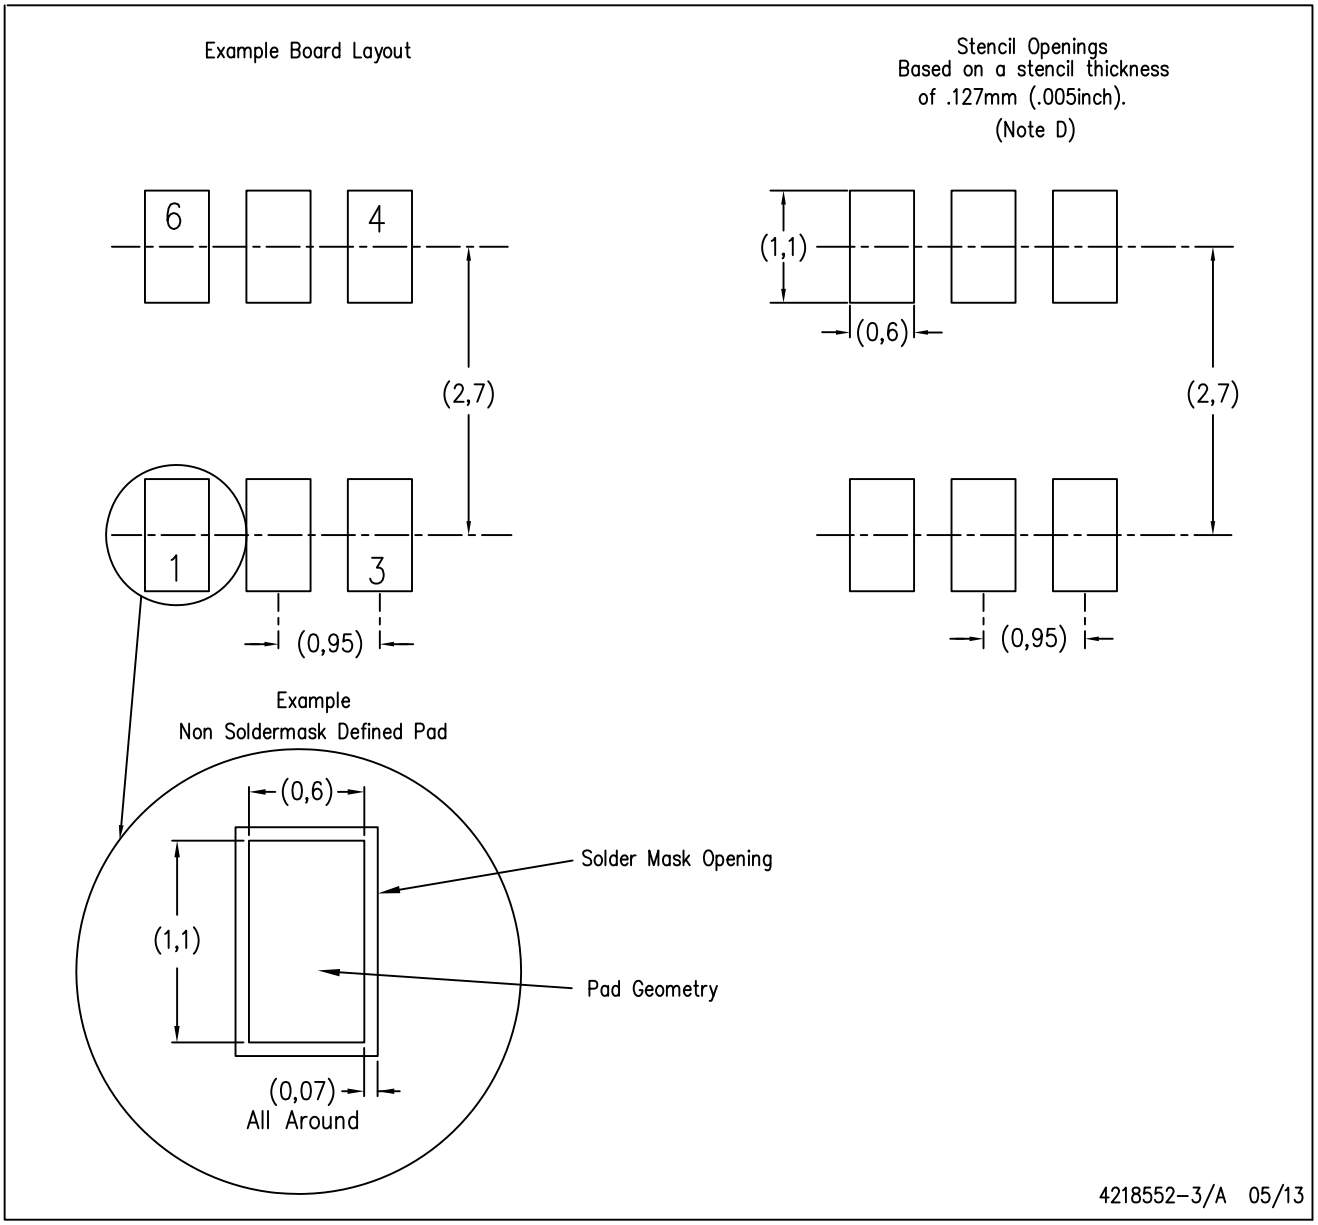
DDC (R–PDSO–G6) PLASTIC SMALL–OUTLINE



4204403–3/E 06/05

NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash or protrusion.
D. Falls within JEDEC MO–193 variation AA (6 pin).

DDC (R–PDSO–G6) PLASTIC SMALL OUTLINE



NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Publication IPC–7351 is recommended for alternate designs.
D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC–7525 for other stencil recommendations.

重要声明

德州仪器(TI) 及其下属子公司有权根据 JESD46 最新标准, 对所提供的产品和服务进行更正、修改、增强、改进或其它更改， 并有权根据 JESD48 最新标准中止提供任何产品和服务。客户在下订单前应获取最新的相关信息, 并验证这些信息是否完整且是最新的。所有产品的销售都遵循在订单确认时所提供的TI 销售条款与条件。

TI 保证其所销售的组件的性能符合产品销售时 TI 半导体产品销售条件与条款的适用规范。仅在 TI 保证的范围内，且 TI 认为 有必要时才会使用测试或其它质量控制技术。除非适用法律做出了硬性规定，否则没有必要对每种组件的所有参数进行测试。

TI 对应用帮助或客户产品设计不承担任何义务。客户应对其使用 TI 组件的产品和应用自行负责。为尽量减小与客户产品和应 用相关的风险，客户应提供充分的设计与操作安全措施。

TI 不对任何 TI 专利权、版权、屏蔽作品权或其它与使用了 TI 组件或服务的组合设备、机器或流程相关的 TI 知识产权中授予 的直接或隐含权限作出任何保证或解释。TI 所发布的与第三方产品或服务有关的信息，不能构成从 TI 获得使用这些产品或服 务的许可、授权、或认可。使用此类信息可能需要获得第三方的专利权或其它知识产权方面的许可，或是 TI 的专利权或其它 知识产权方面的许可。

对于 TI 的产品手册或数据表中 TI 信息的重要部分，仅在没有对内容进行任何篡改且带有相关授权、条件、限制和声明的情况 下才允许进行复制。TI 对此类篡改过的文件不承担任何责任或义务。复制第三方的信息可能需要服从额外的限制条件。

在转售 TI 组件或服务时，如果对该组件或服务参数的陈述与 TI 标明的参数相比存在差异或虚假成分，则会失去相关 TI 组件 或服务的所有明示或暗示授权，且这是不正当的、欺诈性商业行为。TI 对任何此类虚假陈述均不承担任何责任或义务。

客户认可并同意，尽管任何应用相关信息或支持仍可能由 TI 提供，但他们将独力负责满足与其产品及在其应用中使用 TI 产品 相关的所有法律、法规和安全相关要求。客户声明并同意，他们具备制定与实施安全措施所需的全部专业技术和知识，可预见 故障的危险后果、监测故障及其后果、降低有可能造成人身伤害的故障的发生机率并采取适当的补救措施。客户将全额赔偿因 在此类安全关键应用中使用任何 TI 组件而对 TI 及其代理造成的任何损失。

在某些场合中，为了推进安全相关应用有可能对 TI 组件进行特别的促销。TI 的目标是利用此类组件帮助客户设计和创立其特 有的可满足适用的功能安全性标准和要求的终端产品解决方案。尽管如此，此类组件仍然服从这些条款。

TI 组件未获得用于 FDA Class III（或类似的生命攸关医疗设备）的授权许可，除非各方授权官员已经达成了专门管控此类使 用的特别协议。

只有那些 TI 特别注明属于军用等级或“增强型塑料”的 TI 组件才是设计或专门用于军事/航空应用或环境的。购买者认可并同 意，对并非指定面向军事或航空航天用途的 TI 组件进行军事或航空航天方面的应用，其风险由客户单独承担，并且由客户独 力负责满足与此类使用相关的所有法律和法规要求。

TI 已明确指定符合 ISO/TS16949 要求的产品，这些产品主要用于汽车。在任何情况下，因使用非指定产品而无法达到 ISO/TS16949 要求，TI不承担任何责任。
