## DESCRIPTION

This popular Transient Voltage Suppressor (TVS) series for 1N5629 thru 1N5665A are JEDEC registered selections for unidirectional devices. All have the same high Peak Pulse Power rating of 1500 W with extremely fast response times. They are also available in military qualified selections as described in the Features section herein. They are most often used for protecting against transients from inductive switching environments, induced RF effects, or induced secondary lightning effects as found in lower surge levels of IEC61000-4-5. They are also very successful in protecting airborne avionics and electrical systems. Since their response time is virtually instantaneous, they can also protect from ESD and EFT per IEC61000-4-2 and IEC61000-4-4.
IMPORTANT: For the most current data, consult MICROSEMI's website:

* TVS devices are not typically used for dc power dissipation and are instead operated at or less than their rated standoff voltage
$\left(\mathrm{V}_{\mathrm{WM}}\right)$ except for transients that briefly drive the device into avalanche breakdown ( $\mathrm{V}_{\mathrm{BR}}$ to $\mathrm{V}_{\mathrm{C}}$ region).
