MINITIMER<br>Energy-Saving Time Switch<br>IK 8813 / OA 8823

Function Diagram

IK 8813

OA 8823

- According to EN 60 669-1, EN 60 669-2-1
- Can be switched off before the time expires
- Operating times between 0.5 ... 60 min. , as required
- IK 8813 with permanent light switch and LED indicator for contact position
- IK 8813 for installation in rows, width 17.5 mm
- OA 8823 for installation in flush-mounted boxes

## Approvals and Markings

## C $\epsilon$

## Applications

Controlled switching-off of lights (such as staircase, courtyard, garden, garage, attic and cellar lights) as well as ventilators, driers and all electronic consumers in general that experience has shown are rarely switched off again immediately after they have been used.

## Function

The energy-saving switches IK 8813 and OA 8823 are controlled by an electronic timing element. While IK 8813 is designed to be mounted on a top hat rail, OA 8823 is suitable for installation in flush-mounted boxes.
The operating time can be set using a screwdriver. The switch can be activated via a 3 - or 4 -wire connection by pressing a pushbutton (only a 4 -wire connection in the case of OA 8823). The pushbutton and the equipment concerned have to be connected to the same phase in this context.

## Indicators

IK 8813
yellow LED:
on, when the output relay is activated (contact 15-18 is closed)

## Notes

Switch connection boxes ( 60 cm deep) are suitable for installing OA 8823 can be purchased, for example, from Messrs Kaiser, D - 5885 Schalksmühle / Germany (order no. 1055-02). OA 8823 is also available on request complete with installation pushbutton and installation frame for switch connection boxes (diameter 60 mm , depth 40 mm ).

## Connection Terminals

| Terminal designation | Signal designation |
| :--- | :--- |
| A1 | L |
| A2 | N |
| T | Control input for buttons |
| $15,16,18$ | Contact-output delayed |
