## Film Through-Hole Capacitors

## AC Line EMI Suppression and RC Networks

One world. One KEMET.

## AC Line EMI Suppression and RC Networks

## Table of Contents Page

Why Choose KEMET ..... 4
Class X1
F871 Series Metallized Polypropylene Film, 330 VAC. .....  .6
F872 Series Metallized Polypropylene Film, 480 VAC ..... 19
F873 Series Metallized Polypropylene Film, 760 VAC ..... 31
R49 Series Metallized Polypropylene Film, 310 VAC ..... 41
R49 Series Metallized Polypropylene Film, 330 VAC ..... 50
R47 Series Metallized Polypropylene Film, 440 VAC ..... 59
PME271E Series Metallized Impregnated Paper, 300 VAC ..... 68
PME278 Series Metallized Impregnated Paper, 440 VAC ..... 75
P278 Series Metallized Impregnated Paper, 480 VAC ..... 82
Class X2
F861 Series Metallized Polypropylene Film, 310 VAC ..... 89
R46 Series Metallized Polypropylene Film, 275 VAC ..... 103
R46 (Miniature) Series Metallized Polypropylene Film, 275 VAC ..... 112
R46 Series $125^{\circ} \mathrm{C}$ Metallized Polypropylene Film, 275 VAC ..... 121
R46 Series Metallized Polypropylene Film, 300 VAC. ..... 130
R47 Series Metallized Polypropylene Film, 440 VAC ..... 139
R47 Series Metallized Polypropylene Film, 520 VAC ..... 148
PHE820M Series Metallized Polyester Film, 275 VAC ..... 157
PHE820E Series Metallized Polyester Film, 300 VAC ..... 164
PME271M Series Metallized Impregnated Paper, 275 VAC ..... 171
PME264 Series Metallized Impregnated Paper, 660 VAC ..... 178
Class Y2
F881 Series Metallized Polypropylene Film, 300 VAC ..... 184
R41 Series Metallized Polypropylene Film, 300 VAC ..... 196
PME271Y Series Metallized Impregnated Paper, 250 VAC. ..... 205
PME271Y A-E Series Metallized Impregnated Paper, 300 VAC ..... 212
SMP253 Series Metallized Impregnated Paper, 250 VAC, Surface Mount Device ..... 219
Class Y1
PME295 Series Metallized Impregnated Paper, 440 VAC/480 VAC ..... 225
P295 Series Metallized Impregnated Paper, 500 VAC ..... 231
Multiple X \& Y CombinationsPZB300 Series Metallized Impregnated Paper, 275 VAC Delta Configuration X2 $+2 x$ Y2237
PMZ2074 Series Metallized Impregnated Paper, 275 VAC $2 x$ X2 with One Common Terminal ..... 242
PHZ9004 Series Metallized Polypropylene Film, 300 VAC 3x X2 with Separate Terminals for Three-Phase Filtering ..... 247
RC Snubber Networks
F43 Series Metallized Polypropylene Film, 160 VAC/250 VDC, 200 VAC/400 VDC, 220 VAC/630 VDC \& Class X2, 275 VAC 251
PMR205 Series Metallized Impregnated Paper, 125 VAC/250 VDC ..... 257
PMR209 Series Metallized Impregnated Paper, Class X2, 250 VAC ..... 263
P409 Series Metallized Impregnated Paper, Class X2, 275 VAC ..... 269
PMR210 Series Metallized Impregnated Paper, Class X1, 250 VAC ..... 275
P410 Series Metallized Impregnated Paper, Class X1, 300 VAC ..... 281
PMZ2035 Series Metallized Impregnated Paper, Class X1, 440 VAC/1,000 VDC ..... 287
Packaging Information
Lead Taping \& Packaging for Pxxx, PMExxx \& PMRxxx (IEC 60286-2) ..... 292
Lead Taping \& Packaging for F8xx, R4x + R, R4x, PHExxx, \& F43 (IEC 60286-2) ..... 294
Packaging Information for SMP253 is product-specific and included within the appropriate product sections.
KEMET Corporation Sales Offices ..... 296
Disclaimer ..... 297

## One world. One source. One KEMET.

When you partner with KEMET, our entire global organization provides you with the coordinated service you need. No bouncing from supplier to supplier. No endless phone calls and web browsing. We're your single, integrated source for electronic component solutions worldwide.

## Less hassles. More solutions.

Our commitment to product quality and on-time delivery has helped customers succeed for over 90 years. There's a reason KEMET components can be found in defense and aerospace equipment. Our reputation is built on a history of consistency, reliability and service.

## The "Easy-to-Buy-From" company.

KEMET offers a level of responsiveness that far surpasses any other supplier. Our passion for customer service is evident throughout our global sales organization, which offers localized support bolstered by our worldwide logistics capabilities. Whether you need rush samples, technical assistance, in-person consultation, accelerated custom design, design collaboration or prototype services, we have a solution.

## Made for you.

When you need custom products delivered on a tight schedule, you can trust KEMET. Get direct design consultation from global experts, who help you get the job done on time and within budget.

## Working for a better world.

KEMET is dedicated to economically, environmentally and socially sustainable development. We've adopted the Electronic Industry Code of Conduct (EICC) to address all aspects of corporate responsibility. Our manufacturing facilities have won numerous environmental excellence awards and recognitions, and our supply chain is certified. We believe doing the right thing is in everyone's interest.

## About KEMET.

KEMET Corporation is a leading global supplier of electronic components. We offer our customers the broadest selection of capacitor technologies in the industry across multiple dielectrics, along with an expanding range of electromechanical devices, and electromagnetic compatibility solutions. Our vision is to be the preferred supplier of electronic component solutions for customers demanding the highest standards of quality, delivery and service.

## Overview

Metallized polypropylene film encapsulated with self-extinguishing resin in a box of material recognized to $\mathrm{UL} 94 \mathrm{~V}-0$.

## Applications

For worldwide use as electromagnetic interference (EMI) suppression filter in across-the-line applications requiring X1 safety classification. Not for use in "series with mains" type applications.

## Benefits

- Approvals: ENEC, UL, cUL, CQC
- Rated voltage: 330 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.001-12 \mu \mathrm{~F}$
- Lead spacing: $10-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request
- Climatic category 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,500 VDC

## Performance Characteristics

| Rated Voltage | 330 VAC $50 / 60 \mathrm{~Hz}$ |  |  |
| :---: | :---: | :---: | :---: |
| Capacitance Range | 0.001-12 $\mu \mathrm{F}$ |  |  |
| Capacitance Tolerance | $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request |  |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$ |  |  |
| Climatic Category | 40/110/56 |  |  |
| Approvals | ENEC, UL, cUL, CQC |  |  |
| Dissipation Factor | Maximum Values at $+23^{\circ} \mathrm{C}$ |  |  |
|  |  | $\mathrm{C} \leq 0.1 \mu \mathrm{~F}$ | $\mathrm{C}>0.1 \mu \mathrm{~F}$ |
|  | 1 kHz | 0.3\% | 0.2\% |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at 2,500 VDC. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |  |  |
| Insulation Resistance | Between Terminals: |  |  |
|  | $\mathrm{C} \leq 0.33 \mu \mathrm{~F}$ | $\geq 30,000 \mathrm{M} \Omega$ |  |
|  | $\mathrm{C}>0.33 \mu \mathrm{~F}$ | $\geq 10,000 \mathrm{M} \Omega \cdot \mu \mathrm{F}$ |  |
| In DC Applications | Recommended voltage $\leq 800$ VDC |  |  |

## Impedance Graph

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Endurance | IEC $60384-14$ | $1.25 \times V_{R} \mathrm{VAC} 50 \mathrm{~Hz}$, once every hour increase to $1,000 \mathrm{VAC}$ for 0.1 second, <br> 1,000 hours at upper rated temperature |
| Vibration | IEC $60068-2-6$ Test Fc | 3 directions at 2 hours each $10-55 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 1,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC $60068-2-14$ Test Na | Upper and lower rated temperature 5 cycles |
| Active Flammability | IEC 60384-14 | $V_{R}+20$ surge pulses at 4 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle-flame test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \% \mathrm{RH}, 56$ days |

## Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
| ENIEC 60384-14 | CA08.00186 |  |
|  | UL 60384-14 and |  |
| CAN/CSA-E60384-14 | E97797 |  |
|  |  | CQC12001084008 |
|  | IEC 60384-14 | CQC12001084090 |

## Environmental Compliance

All new KEMET EMI capacitors are RoHS Compliant and Halogen Free.

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert through- hole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Wave Soldering Recommendations

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}$ $\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

## Marking

## Overview

The F872 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

For worldwide use as electromagnetic interference (EMI) suppression filter in across-the-line applications requiring X1 safety classification.

## Benefits

- Approvals: ENEC, UL, cUL, CQC
- Rated voltage: 480 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.001-5.6 \mu \mathrm{~F}$
- Lead spacing: $10-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 3,000 VDC

## Performance Characteristics

| Rated Voltage | 480 VAC $50 / 60 \mathrm{~Hz}$ |  |  |
| :---: | :---: | :---: | :---: |
| Capacitance Range | $0.001-5.6 \mu \mathrm{~F}$ |  |  |
| Capacitance Tolerance | $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request |  |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$ |  |  |
| Climatic Category | 40/110/56 |  |  |
| Approvals | ENEC, UL, cUL, CQC |  |  |
| Dissipation Factor | Maximum Values at $+23^{\circ} \mathrm{C}$ |  |  |
|  |  | $\mathrm{C} \leq 0.1 \mu \mathrm{~F}$ | $\mathrm{C}>0.1 \mu \mathrm{~F}$ |
|  | 1 kHz | 0.3\% | 0.2\% |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at $2,500 \mathrm{VDC}$. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |  |  |
| Insulation Resistance | Minimum Values Between Terminals |  |  |
|  | $\mathrm{C} \leq 0.33 \mu \mathrm{~F}$ | $\geq 30,000 \mathrm{M} \Omega$ |  |
|  | C $>0.33 \mu \mathrm{~F}$ | $\geq 10,000 \mathrm{M} \Omega \cdot \mu \mathrm{F}$ |  |
| In DC Applications | Recommended voltage $\leq 1,000$ VDC |  |  |

## Impedance Graph

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Endurance | IEC 60384-14 | $1.25 \times \mathrm{V}_{\mathrm{R}} \mathrm{VAC} 50 \mathrm{~Hz}$, once every hour increase to $1,000 \mathrm{VAC}$ for 0.1 second, |
| Vibration | IEC $60068-2-6$ Test Fc | 3 directions at 2 hours each $10-55 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 1,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC $60068-2-14$ Test Na | Upper and lower rated temperature 5 cycles |
| Active Flammability | IEC $60384-14$ | $V_{R}+20$ surge pulses at 4 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle-flame test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \% \mathrm{RH}, 56$ days |

## Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
|  | ENIEC 60384-14 | CA08.00187 |
|  | UL 60384-14 and CAN/CSA-E60384-14 | E97797 |
| CQC | IEC 60384-14 | CQC12001084716 CQC12001084708 CQC12001084711 CQC12001084714 CQC12001084713 CQC12001084715 CQC12001088081 |

## Environmental Compliance

All new KEMET EMI capacitors are RoHS Compliant and Halogen Free.

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert through- hole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Wave Soldering Recommendations

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}$ $\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

## Marking

- KEMET or KEC
- Series
- Capacitance
- Capacitance tolerance
- Rated voltage
- X1
- Approval marks
- Manufacturing date code
- IEC climatic category
- Passive flammability class

## Overview

Metallized polypropylene film encapsulated with self-extinguishing resin in a box of material recognized to UL $94 \mathrm{~V}-0$.

## Applications

For worldwide use as electromagnetic interference (EMI) suppression filter in across-the-line applications requiring X1 safety classification.

## Benefits

- Approvals: ENEC, UL, cUL, CQC
- Rated voltage: 760 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.01-1.8 \mu \mathrm{~F}$
- Lead spacing: $22.5-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request
- Climatic category 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 4,250 VDC

## Performance Characteristics

| Rated Voltage | 760 VAC $50 / 60 \mathrm{~Hz}$ |  |  |
| :---: | :---: | :---: | :---: |
| Capacitance Range | 0.01-1.8 $\mu \mathrm{F}$ |  |  |
| Capacitance Tolerance | $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request |  |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$ |  |  |
| Climatic Category | 40/110/56 |  |  |
| Approvals | ENEC, UL, cUL, CQC |  |  |
| Dissipation Factor | Maximum Values at $+23^{\circ} \mathrm{C}$ |  |  |
|  |  | $\mathrm{C} \leq 0.1 \mu \mathrm{~F}$ | $\mathrm{C}>0.1 \mu \mathrm{~F}$ |
|  | 1 kHz | 0.1\% | 0.1\% |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at 4,250 VDC. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |  |  |
| Insulation Resistance | Between Terminals: |  |  |
|  | $\mathrm{C} \leq 0.33 \mu \mathrm{~F}$ | $\geq 30,000 \mathrm{M} \Omega$ |  |
|  | $\mathrm{C}>0.33 \mu \mathrm{~F}$ | $\geq 10,000 \mathrm{M} \Omega \cdot \mu \mathrm{F}$ |  |
| In DC Applications | Recommended voltage $\leq 1,500 \mathrm{VDC}$ |  |  |

## Impedance Graph

## Environmental Test Data

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert through- hole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Wave Soldering Recommendations

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}$ $\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

## Overview

The R49 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

For use as electromagnetic interference (EMI) suppression filter in across-the-line applications requiring X1 safety classification. Intended for use in situations where exposure to a shock in the event of capacitor failure is not possible. Not for use in "series with mains" type applications. X1 classified capacitors are for use only in a permanently connected apparatus with a connection to mains which cannot be loosened without the use of a tool.

## Benefits

- Approvals: ENEC, UL, cUL
- Class X1 (IEC 60384-14)
- Rated voltage: 310 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.01-2.2 \mu \mathrm{~F}$
- Lead spacing: $10.0-27.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%$
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,200 VDC/1,500 VAC
- Self-healing properties

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert throughhole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Wave Soldering Recommendations

Figure 1

| Dielectric <br> Film Material | Maximum Preheat <br> Temperature |  | Maximum <br> Peak Soldering <br> Temperature |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Capacitor <br> Pitch <br> $\leq 10 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $=15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $>15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $\leq 15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $>15 \mathrm{~mm}$ |
|  | $130^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |
| Polypropylene | $100^{\circ} \mathrm{C}$ | $110^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $260^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |
| Polyphenylene <br> Sulphide | $150^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $160^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

## Overview

The R47 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

For use as electromagnetic interference (EMI) suppression filter in across-the-line applications requiring X1 safety classification. Intended for use in situations where exposure to a shock in the event of capacitor failure is not possible. Not for use in "series with mains" type applications. X1 classified capacitors are for use only in a permanently connected apparatus with a connection to mains which cannot be loosened without the use of a tool.

## Benefits

- Approvals: ENEC, UL, cUL
- Class X1 (IEC 60384-14)
- Rated voltage: 330 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.047-6.8 \mu \mathrm{~F}$
- Lead spacing: $15.0-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%$
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,200 VDC/1,500 VAC
- Self-healing properties

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert throughhole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Wave Soldering Recommendations

Figure 1

| Dielectric <br> Film Material | Maximum Preheat <br> Temperature |  | Maximum <br> Peak Soldering <br> Temperature |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Polyphenylene <br> Sulphide | $150^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $160^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

## Overview

The R47 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

For use as electromagnetic interference (EMI) suppression filter in across-the-line applications requiring X1 safety classification. Intended for use in situations where exposure to a shock in the event of capacitor failure is not possible. Not for use in "series with mains" type applications. X1 classified capacitors are for use only in a permanently connected apparatus with a connection to mains which cannot be loosened without the use of a tool.

## Benefits

- Approvals: ENEC, UL, cUL
- Class X1 (IEC 60384-14)
- Rated voltage: 440 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.0047-2.2 \mu \mathrm{~F}$
- Lead spacing: $10.0-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%$
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$

- $100 \%$ screening factory test at 2,700 VDC/1,700 VAC
- Self-healing properties

## Performance Characteristics

| Dielectric | Polypropylene film |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Plates | Metal layer deposited by evaporation under vacuum |  |  |  |
| Winding | Non-inductive type |  |  |  |
| Leads | Tinned wire |  |  |  |
| Protection | Plastic case, thermosetting resin filled. Box material is solvent resistant and flame retardant according to UL94. |  |  |  |
| Related documents | IEC 60384-14, EN 60384-14 |  |  |  |
| Rated Voltage ( $\mathrm{V}_{\mathrm{R}}$ ) | 440 VAC ( $50 / 60 \mathrm{~Hz}$ ), 1,000 VDC |  |  |  |
| Capacitance Range | $0.0047 \mu \mathrm{~F}$ to $2.2 \mu \mathrm{~F}$ |  |  |  |
| Capacitance Values | E6/E12 series (IEC 60063) |  |  |  |
| Capacitance Tolerance | $\pm 10 \%, \pm 20 \%$ |  |  |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$ |  |  |  |
| Climatic Category | 40/110/56 IEC 60068-1 |  |  |  |
| Approvals | ENEC, UL, cUL |  |  |  |
| Dissipation Factor (tanర) | $\leq 0.1 \%\left(0.06 \%{ }^{*}\right) @ 1 \mathrm{kHz},+25^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$ ( ${ }^{*}$ typical value) |  |  |  |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at $2,700 \mathrm{VDC} / 1,700 \mathrm{VAC}$. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures |  |  |  |
| Insulation Resistance | Measured at $+25^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$, according to IEC 60384-2 |  |  |  |
|  | Minimum Values Between Terminals |  |  |  |
|  | Voltage Charge | Voltage Charge Time | $\mathrm{C} \leq 0.33 \mu \mathrm{~F}$ | $\mathrm{C}>0.33 \mu \mathrm{~F}$ |
|  | 100 VDC | 1 min | $\geq 1 \cdot 10^{5} \mathrm{M} \Omega$ | $\geq 30,000 \mathrm{M} \Omega \cdot \mu \mathrm{F}$ |
| In DC Applications | Recommended voltage $\leq 1,000$ VDC |  |  |  |

## Impedance Graph

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Endurance | EN/IEC $60384-14$ | $1.25 \times V_{\mathrm{R}}$ VAC 50 Hz, once every hour increase to 1,000 VAC for 0.1 <br> second, 1,000 hours at upper rated temperature |
| Vibration | IEC $60068-2-6$ Test FC | 3 directions at 2 hours each $10-55 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 1,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC $60068-2-14$ Test Na | Upper and lower rated temperature 5 cycles |
| Active Flammability | IEC $60384-14$ | $V_{R}+20$ surge pulses at 2.5 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle flame test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \%$ RH, 56 days |

## Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
|  | EN/IEC 60384-14 | CA08.00101 |
| EOS | UL 60384-14 and <br> CAN/CSA E60384-14 <br> (440 VAC) | E97797 |

## Environmental Compliance

All KEMET EMI capacitors are RoHS Compliant.

RoHS Compliant

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert throughhole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Wave Soldering Recommendations

Figure 1

| Dielectric <br> Film Material | Maximum Preheat <br> Temperature |  | Maximum <br> Peak Soldering <br> Temperature |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

# PME271E Series Metallized Impregnated Paper, Class X1, 300 VAC 

## Overview

The PME271E Series consists of multilayer metallized paper, encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use as an electromagnetic interference suppressor in all X1 and across-the-line applications.

## Benefits

- Approvals: ENEC, UL
- Rated voltage: 300 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.01-0.22 \mu \mathrm{~F}$
- Lead spacing: 15.2-25.4 mm
- Capacitance tolerance: $\pm 20 \%$ for $\mathrm{C} \leq 0.1 \mu \mathrm{~F}, \pm 10 \%$ for $\mathrm{C}>0.1 \mu \mathrm{~F}$
- Climatic category: 40/110/56/B, IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,150 VDC
- Highest possible safety regarding active and passive flammability
- Excellent self-healing properties which ensure long life even when subjected to frequent overvoltages
- Good resistance
to ionization due to impregnated paper dielectric

- High dV/dt capability
- Impregnated paper ensures excellent stability and reliability properties, particularly in applications with continuous operation

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

# PME278 Series Metallized Impregnated Paper, Class X1, 440 VAC 

CHARGED.

## Overview

The PME278 Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use as an electromagnetic interference suppressor in all X1 and across-the-line applications.

## Benefits

- Approvals: ENEC
- Rated voltage: 440 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.001-0.15 \mu \mathrm{~F}$
- Lead spacing: 10.2 - 25.4 mm
- Capacitance tolerance: $\pm 20 \%$
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,700 VDC
- Highest possible safety regarding active and passive flammability
- Excellent self-healing properties which ensure long life even when subjected to frequent over voltages
- Good resistance to ionization due to impregnated paper dielectric
- Impregnated paper ensures excellent stability and reliability properties, particularly in
 applications with continuous operation

## Legacy Part Number System

# P278 Series Metallized Impregnated Paper, Class X1, 480 VAC 

## Overview

The P278 Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use as an electromagnetic interference suppressor in all X1 and across-the-line applications.

## Benefits

- Approvals: ENEC, UL, cUL
- Rated voltage: 480 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.001-0.15 \mu \mathrm{~F}$
- Lead spacing: 10.2 - 25.4 mm
- Capacitance tolerance: $\pm 20 \%$
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations

- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,700 VDC
- Highest possible safety regarding active and passive flammability
- Excellent self-healing properties which ensure long life even when subjected to frequent over voltages
- Good resistance to ionization due to impregnated paper dielectric
- Impregnated paper ensures excellent stability and reliability properties, particularly in applications with continuous operation

Note: See Ordering Options Table for lead length (LL) options.

## Performance Characteristics

| Rated Voltage | 480 VAC $50 / 60 \mathrm{~Hz}$ |
| :---: | :---: |
| Capacitance Range | $0.001-0.15 \mu \mathrm{~F}$ |
| Capacitance Tolerance | $\pm 20 \%$ |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$ |
| Climatic Category | 40/110/56/B |
| Approvals | ENEC, UL, cUL |
| Dissipation Factor | Maximum Values at $+23^{\circ} \mathrm{C}$ |
|  | 1 kHz -1.3\% |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at $2,700 \mathrm{VDC}$. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |
| Insulation Resistance | Minimum Value Between Terminals |
|  | $\geq 12,000 \mathrm{M} \Omega$ |
| In DC Applications | Recommended voltage $\leq 1,000$ VDC |

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Vibration | IEC $60068-2-6$ Test Fc | 3 directions at 2 hours each $10-500 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 4,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC $60068-2-14$ Test Na | Upper and lower rated temperature 5 cycles |
| Active Flammability | IEC $60384-14$ | $V_{R}+20$ surge pulses at 4.0 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle-flame test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \%$ RH,56 days |

## Approvals

| Certification Body | Mark | Specification | File Number |
| :---: | :---: | :---: | :---: |
| Intertek Semko AB | ENJ | ENIEC 60384-14 | SE/0140-35 |
| UL | CTS | UL 60384-14 CAN/ <br> CSA-E60384-14-09 | E73869 |

## Environmental Compliance

All KEMET EMI capacitors are RoHS Compliant.

RoHS Compliant

(1) Insert ordering code for lead type and packaging. See Ordering Options Table for available options.

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

## Overview

The F861 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

For worldwide use as electromagnetic interference (EMI) suppression filter in across-the-line applications requiring X2 safety classification. Not for use in "series with mains" type applications.

## Benefits

- Approvals: ENEC, UL, CUL, CQC
- Rated voltage: 310 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.001-45 \mu \mathrm{~F}$
- Lead spacing: 7.5 - 52.5 mm
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations

- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 1,900 VDC

## Performance Characteristics

| Rated Voltage | 310 VAC $50 / 60 \mathrm{~Hz}$ |  |  |
| :---: | :---: | :---: | :---: |
| Capacitance Range | 0.001-45 $\mu \mathrm{F}$ |  |  |
| Capacitance Tolerance | $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request |  |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$ |  |  |
| Climatic Category | 40/110/56 |  |  |
| Approvals | ENEC, UL, cUL, CQC |  |  |
| Dissipation Factor | Maximum Values at $+23^{\circ} \mathrm{C}$ |  |  |
|  |  | $\mathrm{C} \leq 0.1 \mu \mathrm{~F}$ | $\mathrm{C}>0.1 \mu \mathrm{~F}$ |
|  | 1 kHz | 0.3\% | 0.2\% |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at 1,900 VDC. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |  |  |
| Insulation Resistance | Minimum Values Between Terminals |  |  |
|  | $\mathrm{C} \leq 0.33 \mu \mathrm{~F}$ | $\geq 30,000 \mathrm{M} \Omega$ |  |
|  | C $>0.33 \mu \mathrm{~F}$ | $\geq 10,000 \mathrm{M} \Omega \cdot \mu \mathrm{F}$ |  |
| In DC Applications | Recommended voltage $\leq 630$ VDC |  |  |

## Impedance Graph

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Endurance | IEC $60384-14$ | $1.25 \times \mathrm{V}_{\mathrm{R}} \mathrm{VAC} 50 \mathrm{~Hz}$, once every hour increase to $1,000 \mathrm{VAC}$ for 0.1 <br> second, 1,000 hours at upper rated temperature |
| Vibration | IEC $60068-2-6$ Test Fc | 3 directions at 2 hours each $10-55 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 1,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC $60068-2-14$ Test Na | Upper and lower rated temperature 5 cycles |
| Active Flammability | IEC $60384-14$ | $\mathrm{~V}_{\mathrm{R}}+20$ surge pulses at 2.5 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle-flame test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \%$ RH, 56 days |

## Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
|  | EN/IEC 60384-14 | CA08.00189 |
|  | UL 60384-14 and CAN/CSA- | E97797 |
|  | E60384-14 |  |
|  |  | CQC12001084206 |
|  |  | CQC12001084386 |

## Environmental Compliance

All new KEMET EMI capacitors are RoHS Compliant and Halogen Free.

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of SnAuCu (SAC) alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert through- hole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Wave Soldering Recommendations

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

## Overview

The R46 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

For worldwide use in electromagnetic interference (EMI) suppression in across-the-line applications requiring X2 safety classification. Intended for use in situations where capacitor failure would not result in exposure to electric shock. Not for use in "series with mains" type applications.

## Benefits

- Approvals: ENEC, UL, cUL, CQC
- Class X2 (IEC 60384-14)
- Rated voltage: 275 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: 0.01 - $10 \mu \mathrm{~F}$
- Lead spacing: $10.0-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%$
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,200 VDC/1,500 VAC
- Self-healing properties

## Part Number System

| Note: See Ordering Options Table for lead length (LL) options. |  |  |  |  |  |  |  |  |  |

## Performance Characteristics

| Dielectric | Polypropylene film |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Plates | Metal layer deposited by evaporation under vacuum |  |  |  |
| Winding | Non-inductive type |  |  |  |
| Leads | Tinned wire |  |  |  |
| Protection | Plastic case, thermosetting resin filled. Box material is solvent resistant and flame retardant according to UL94. |  |  |  |
| Related documents | IEC 60384-14, EN 60384-14 |  |  |  |
| Rated Voltage ( $\mathrm{V}_{\mathrm{R}}$ ) | 275 VAC ( $50 / 60 \mathrm{~Hz}$ ), 560 VDC |  |  |  |
| Capacitance Range | $0.010 \mu \mathrm{~F}$ to $10 \mu \mathrm{~F}$ |  |  |  |
| Capacitance Values | E6 series (IEC 60063) |  |  |  |
| Capacitance Tolerance | $\pm 10 \%, \pm 20 \%$ |  |  |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$ |  |  |  |
| Climatic Category | 40/110/56 IEC 60068-1 |  |  |  |
| Approvals | ENEC, UL, cUL, CQC |  |  |  |
| Dissipation Factor (tanర) | $\leq 0.1 \%$ ( $0.06 \% \%^{*}$ ) @ $1 \mathrm{kHz},+25^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$ (* typical value) |  |  |  |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at $2,200 \mathrm{VDC} / 1,500 \mathrm{VAC}$. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |  |  |  |
| Insulation Resistance | Measured at $+25^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$, according to IEC 60384-2 |  |  |  |
|  | Minimum Values Between Terminals |  |  |  |
|  | Voltage Charge | Voltage Charge Time | $\mathrm{C} \leq 0.33 \mu \mathrm{~F}$ | $\mathrm{C}>0.33 \mu \mathrm{~F}$ |
|  | 100 VDC | 1 min | $\begin{gathered} \geq 1 \cdot 10^{5} \mathrm{M} \Omega \\ \left(\geq 5 \cdot 10^{5} \mathrm{M} \Omega\right)^{\star} \\ \text { * typical value } \end{gathered}$ | $\begin{gathered} \geq 30,000 \mathrm{M} \Omega \cdot \mu \mathrm{~F} \\ (\geq 150,000 \mathrm{M} \Omega \cdot \mu \mathrm{~F})^{*} \\ \text { *typical value } \\ \hline \end{gathered}$ |
| In DC Applications | Recommended voltage $\leq 560$ VDC |  |  |  |

## Impedance Graph

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Endurance | EN/IEC $60384-14$ | $1.25 \times V_{\mathrm{R}}$ VAC 50 Hz, once every hour increase to 1,000 VAC for 0.1 <br> second, 1,000 hours at upper rated temperature |
| Vibration | IEC $60068-2-6$ Test FC | 3 directions at 2 hours each $10-55 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 1,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC $60068-2-14$ Test Na | Upper and lower rated temperature 5 cycles |
| Active Flammability | IEC $60384-14$ | $V_{R}+20$ surge pulses at 2.5 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle flame test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \%$ RH, 56 days |

## Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
|  | EN/IEC 60384-14 | V4413 |
|  | UL 60384-14 and <br> CAN/CSA E60384-14 <br> (310VAC) |  |

## Environmental Compliance

All KEMET EMI capacitors are RoHS Compliant.

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert throughhole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Wave Soldering Recommendations

Figure 1

| Dielectric <br> Film Material | Maximum Preheat <br> Temperature |  | Maximum <br> Peak Soldering <br> Temperature |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Capacitor <br> Pitch <br> $\leq 10 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $=15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $>15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $\leq 15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $>15 \mathrm{~mm}$ |
|  | $130^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |
| Polypropylene | $100^{\circ} \mathrm{C}$ | $110^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $260^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |
| Polyphenylene <br> Sulphide | $150^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $160^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

# Metallized Polypropylene Film EMI Suppression Capacitors, R46 (Miniature) Series, Class X2, 275 VAC, $110^{\circ} \mathrm{C}$ 

## Overview

The R46 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

For worldwide use in electromagnetic interference (EMI) suppression in across-the-line applications requiring X2 safety classification. Intended for use in situations where capacitor failure would not result in exposure to electric shock. Not for use in "series with mains" type applications.

## Benefits

- Approvals: ENEC, UL, cUL, CQC
- Class X2 (IEC 60384-14)
- Rated voltage: 275 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: 0.033-10 $\mu \mathrm{F}$
- Lead spacing: $10.0-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%$
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,200 VDC/1,500 VAC
- Self-healing properties

(3) $M= \pm 20 \%$ (only available tolerance).

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert throughhole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Wave Soldering Recommendations

Figure 1

| Dielectric <br> Film Material | Maximum Preheat <br> Temperature |  | Maximum <br> Peak Soldering <br> Temperature |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Capacitor <br> Pitch <br> $\leq 10 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $=15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $>15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $\leq 15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $>15 \mathrm{~mm}$ |
|  | $130^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |
| Polypropylene | $100^{\circ} \mathrm{C}$ | $110^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $260^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |
| Polyphenylene <br> Sulphide | $150^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $160^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

## Overview

The R46 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

For worldwide use in electromagnetic interference (EMI) suppression in across-the-line applications requiring X2 safety classification. Intended for use in situations where capacitor failure would not result in exposure to electric shock. Not for use in "series with mains" type applications.

## Benefits

- Approvals: ENEC, UL, cUL
- Class X2 (IEC 60384-14)
- Rated voltage: 275 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.01-1 \mu \mathrm{~F}$
- Lead spacing: $10.0-22.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%$
- Climatic category: 40/125/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,200 VDC/1,500 VAC
- Self-healing properties

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Endurance | EN/IEC $60384-14$ | $1.25 \times V_{\mathrm{R}}$ VAC 50 Hz, once every hour increase to 1,000 VAC for 0.1 <br> second, 1,000 hours at upper rated temperature |
| Vibration | IEC $60068-2-6$ Test FC | 3 directions at 2 hours each $10-55 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 1,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC $60068-2-14$ Test Na | Upper and lower rated temperature 5 cycles |
| Active Flammability | IEC $60384-14$ | $V_{R}+20$ surge pulses at 2.5 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle flame test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \%$ RH, 56 days |

## Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
| ENIEC 60384-14 | V4413 |  |
|  | UL 60384-14 and <br> CAN/CSA E60384-14 <br> (310VAC) | E97797 |

## Environmental Compliance

All KEMET EMI capacitors are RoHS Compliant.

RoHS Compliant

(3) $M= \pm 20 \%$ (only available tolerance).

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert throughhole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Wave Soldering Recommendations

Figure 1

| Dielectric <br> Film Material | Maximum Preheat <br> Temperature |  | Maximum <br> Peak Soldering <br> Temperature |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Capacitor <br> Pitch <br> $\leq 10 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $=15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $>15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $\leq 15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $>15 \mathrm{~mm}$ |
|  | $130^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |
| Polypropylene | $100^{\circ} \mathrm{C}$ | $110^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $260^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |
| Polyphenylene <br> Sulphide | $150^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $160^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

## Overview

The R46 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

For worldwide use in electromagnetic interference (EMI) suppression in across-the-line applications requiring X2 safety classification. Intended for use in situations where capacitor failure would not result in exposure to electric shock. Not for use in "series with mains" type applications.

## Benefits

- Approvals: ENEC, UL, cUL, CQC
- Class X2 (IEC 60384-14)
- Rated voltage: 300 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: 0.01 - $10 \mu \mathrm{~F}$
- Lead spacing: $10.0-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%$
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,200 VDC/1,500 VAC

- Self-healing properties

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert throughhole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Wave Soldering Recommendations

Figure 1

| Dielectric <br> Film Material | Maximum Preheat <br> Temperature |  | Maximum <br> Peak Soldering <br> Temperature |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Capacitor <br> Pitch <br> $\leq 10 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $=15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $>15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $\leq 15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $>15 \mathrm{~mm}$ |
|  | $130^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |
| Polypropylene | $100^{\circ} \mathrm{C}$ | $110^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $260^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |
| Polyphenylene <br> Sulphide | $150^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $160^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

## Overview

The R47 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

For worldwide use in electromagnetic interference (EMI) suppression in across-the-line applications requiring X2 safety classification. Intended for use in situations where capacitor failure would not result in exposure to electric shock. Not for use in "series with mains" type applications.

## Benefits

- Approvals: ENEC, UL, cUL
- Class X2 (IEC 60384-14)
- Rated voltage: 440 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.0047-2.2 \mu \mathrm{~F}$
- Lead spacing: $10.0-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%$
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,200 VDC/1,500 VAC
- Self-healing properties

Note: See Ordering Options Table for lead length (LL) options.

## Performance Characteristics

| Dielectric | Polypropylene film |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Plates | Metal layer deposited by evaporation under vacuum |  |  |  |
| Winding | Non-inductive type |  |  |  |
| Leads | Tinned wire |  |  |  |
| Protection | Plastic case, thermosetting resin filled. Box material is solvent resistant and flame retardant according to UL94. |  |  |  |
| Related documents | IEC 60384-14, EN 60384-14 |  |  |  |
| Rated Voltage ( $\mathrm{V}_{\mathrm{R}}$ ) | 440 VAC ( $50 / 60 \mathrm{~Hz}$ ), 1000 VDC |  |  |  |
| Capacitance Range | 4700 pF to $1 \mu \mathrm{~F}$ |  |  |  |
| Capacitance Values | E6 series (IEC 60063) |  |  |  |
| Capacitance Tolerance | $\pm 10 \%, \pm 20 \%$ |  |  |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$ |  |  |  |
| Climatic Category | 40/110/56 IEC 60068-1 |  |  |  |
| Approvals | ENEC, UL, cUL |  |  |  |
| Dissipation Factor (tañ) | $\leq 0.1 \%$ ( $0.06 \% \%^{*}$ ) @ $1 \mathrm{kHz},+25^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$ (* typical value) |  |  |  |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at $2,700 \mathrm{VDC} / 1,700 \mathrm{VAC}$. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures |  |  |  |
| Insulation Resistance | Measured at $+25^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$, according to IEC 60384-2 |  |  |  |
|  | Minimum Values Between Terminals |  |  |  |
|  | Voltage Charge | Voltage Charge Time | $\mathrm{C} \leq 0.33 \mu \mathrm{~F}$ | $\mathrm{C}>0.33 \mu \mathrm{~F}$ |
|  | 100 VDC | 1 min | $\geq 1 \cdot 10^{5} \mathrm{M} \Omega$ | $\geq 30,000 \mathrm{M} \Omega \cdot \mu \mathrm{F}$ |
| In DC Applications | Recommended voltage $\leq 1000$ VDC |  |  |  |

## Impedance Graph

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Endurance | EN/IEC $60384-14$ | $1.25 \times V_{\mathrm{R}}$ VAC 50 Hz, once every hour increase to 1,000 VAC for 0.1 <br> second, 1,000 hours at upper rated temperature |
| Vibration | IEC $60068-2-6$ Test FC | 3 directions at 2 hours each $10-55 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 1,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC $60068-2-14$ Test Na | Upper and lower rated temperature 5 cycles |
| Active Flammability | IEC $60384-14$ | $V_{R}+20$ surge pulses at 2.5 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle flame test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \%$ RH, 56 days |

## Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
|  | EN/IEC 60384-14 | CA08.00101 |

## Environmental Compliance

All KEMET EMI capacitors are RoHS Compliant.

RoHS Compliant

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert throughhole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Wave Soldering Recommendations

Figure 1

$\left.$|  | Maximum Preheat <br> Temperature |  | Maximum <br> Pielectric <br> Film Material <br> Temperature |  |  |

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

# Metallized Polypropylene Film EMI Suppression Capacitors, R47 Series, Class X2, 520 VAC, $85^{\circ} \mathrm{C}$ 

## Overview

The R47 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

For worldwide use in electromagnetic interference (EMI) suppression in across-the-line applications requiring X2 safety classification. Intended for use in situations where capacitor failure would not result in exposure to electric shock. Not for use in "series with mains" type applications.

## Benefits

- Approvals: ENEC, UL, cUL
- Class X2 (IEC 60384-14)
- Rated voltage: 520 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.0047-2.2 \mu \mathrm{~F}$
- Lead spacing: $10.0-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%$
- Climatic category: 40/85/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,200 VDC/1,500 VAC
- Self-healing properties

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert throughhole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Wave Soldering Recommendations

Figure 1

| Dielectric <br> Film Material | Maximum Preheat <br> Temperature |  | Maximum <br> Peak Soldering <br> Temperature |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Capacitor <br> Pitch <br> $\leq 10 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $=15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $>15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $\leq 15 \mathrm{~mm}$ | Capacitor <br> Pitch <br> $>15 \mathrm{~mm}$ |
|  | $130^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |
| Polypropylene | $100^{\circ} \mathrm{C}$ | $110^{\circ} \mathrm{C}$ | $130^{\circ} \mathrm{C}$ | $260^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |
| Polyphenylene <br> Sulphide | $150^{\circ} \mathrm{C}$ | $150^{\circ} \mathrm{C}$ | $160^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ | $270^{\circ} \mathrm{C}$ |

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

## Overview

The PHE820M Series is constructed of series winding of metallized polyester encapsulated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use in electromagnetic interference suppression in all X2 and across-the-line applications.

## Benefits

- Approvals: ENEC, UL, cUL
- Rated voltage: 275 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.01-2.2 \mu \mathrm{~F}$
- Lead spacing: $15.0-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request
- Climatic category: 40/100/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+100^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,150 VDC

## Performance Characteristics

| Rated Voltage | 275 VAC 50/60 Hz |  |
| :---: | :---: | :---: |
| Capacitance Range | 0.01-2.2 $\mu \mathrm{F}$ |  |
| Capacitance Tolerance | $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+100^{\circ} \mathrm{C}$ |  |
| Climatic Category | 40/100/56 |  |
| Approvals | ENEC, UL, cUL |  |
| Dissipation Factor | Maximum Values at $+23^{\circ} \mathrm{C}$ |  |
|  | 1 kHz | 1.0\% |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at 2,150 VDC. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |  |
| Insulation Resistance | Minimum Values Between Terminals |  |
|  | $\mathrm{C} \leq 0.33 \mu \mathrm{~F}$ | $\geq 30,000 \mathrm{M} \Omega$ |
|  | C > $0.33 \mu \mathrm{~F}$ | $\geq 10,000 \mathrm{M} \Omega \cdot \mu \mathrm{F}$ |
| In DC Applications | Recommended voltage $\leq 760$ VDC |  |

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Endurance | EN/IEC $60384-14$ | $1.25 \times V_{R}$ VAC 50 Hz, once every hour increase to 1,000 VAC for 0.1 <br> second, 1,000 hours at upper rated temperature |
| Vibration | IEC $60068-2-6$ Test Fc | 3 directions at 2 hours each $10-55 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 1,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC 60068-2-14 Test Na | Upper and lower rated temperature 5 cycles |
| Active Flammability | IEC $60384-14$ | $\mathrm{~V}_{\mathrm{R}}+20$ surge pulses at 2.5 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle Flame Test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \% \mathrm{RH}, 56$ days |

## Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
|  | EN/IEC 60384-14 | SE/0140-12E |
|  | UL 1414 (up to $1 \mu \mathrm{~F}, 85^{\circ} \mathrm{C}, 250 \mathrm{VAC}$ ) | E73869 |
|  | $\begin{gathered} \text { CSA - C22.2 No. } 1 \\ \text { (up to } 1 \mu \mathrm{~F}, 85^{\circ} \mathrm{C}, 250 \mathrm{VAC} \text { ) } \end{gathered}$ | E73869 |
|  | UL 1283 (310 VAC) | E100117 |
|  | CSA - C22.2 No. 8 (310 VAC) | E100117 |

## Environmental Compliance

All KEMET EMI capacitors are RoHS Compliant.

RoHS Compliant

(1) $M= \pm 20 \%, K= \pm 10 \%, J= \pm 5 \%$ on request.
(2) Insert ordering code for lead type and packaging. See Ordering Options Table for available options.

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

## Marking

- KEMET's logo
- Series
- Capacitance
- Capacitance tolerance
- Rated voltage
- Capacitor class
- Approval marks
- Manufacturing date code
- IEC climatic category
- Passive flammability class
- Manufacturing plant

## Overview

The PHE820E Series is constructed of series winding of metallized polyester encapsulated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use in electromagnetic interference suppression in all X2 and across-the-line applications.

## Benefits

- Approvals: ENEC, UL, cUL
- Rated voltage: 300 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.01-2.2 \mu \mathrm{~F}$
- Lead spacing: $15.0-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request
- Climatic category: 40/100/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+100^{\circ} \mathrm{C}$

- $100 \%$ screening factory test at 2,150 VDC

## Performance Characteristics

| Rated Voltage | 300 VAC $50 / 60 \mathrm{~Hz}$ |  |
| :---: | :---: | :---: |
| Capacitance Range | 0.01-2.2 $\mu \mathrm{F}$ |  |
| Capacitance Tolerance | $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+100^{\circ} \mathrm{C}$ |  |
| Climatic Category | 40/100/56 |  |
| Approvals | ENEC, UL, cUL |  |
| Dissipation Factor | Maximum Values at $+23^{\circ} \mathrm{C}$ |  |
|  | 1 kHz | 1.0\% |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at $2,150 \mathrm{VDC}$. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |  |
| Insulation Resistance | Minimum Values Between Terminals |  |
|  | $\mathrm{C} \leq 0.33 \mu \mathrm{~F}$ | $\geq 30,000 \mathrm{M} \Omega$ |
|  | C > $0.33 \mu \mathrm{~F}$ | $\geq 10,000 \mathrm{M} \Omega \cdot \mu \mathrm{F}$ |
| In DC Applications | Recommended voltage $\leq 760$ VDC |  |

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Endurance | EN/IEC $60384-14$ | $1.25 \times V_{R}$ VAC 50 Hz, once every hour increase to $1,000 \mathrm{VAC}$ for 0.1 <br> second, 1,000 hours at upper rated temperature |
| Vibration | IEC $60068-2-6$ Test Fc | 3 directions at 2 hours each $10-55 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | $1,000 \mathrm{bumps}$ at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC $60068-2-14$ Test Na | Upper and lower rated temperature 5 cycles $^{\text {Active Flammability }}$ |
| Passive Flammability | IEC $60384-14$ | $\mathrm{~V}_{\mathrm{R}}+20$ surge pulses at 2.5 kV (pulse every 5 seconds) |
| Damp Heat Steady State | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle-flame test |

## Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
|  | EN/IEC 60384-14 | SE/0140-12E |
|  | UL 1414 (up to $1 \mu \mathrm{~F}, 85^{\circ} \mathrm{C}, 250 \mathrm{VAC}$ ) | E73869 |
|  | $\begin{gathered} \text { CSA }-\mathrm{C} 22.2 \mathrm{No} .1 \\ \text { (up to } 1 \mu \mathrm{~F}, 85^{\circ} \mathrm{C}, 250 \mathrm{VAC} \text { ) } \end{gathered}$ | E73869 |
|  | UL 1283 (310 VAC) | E100117 |
|  | CSA - C22.2 No. 8 (310 VAC) | E100117 |

## Environmental Compliance

All KEMET EMI capacitors are RoHS Compliant.

RoHS Compliant

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

## Marking

# PME271M Series Metallized Impregnated Paper, Class X2, 275 VAC 

## Overview

The PME271M Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use in electromagnetic interference suppression in all X2 and across-the-line applications.

## Benefits

- Approvals: ENEC, UL, cUL
- Rated voltage: 275 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.001-0.6 \mu \mathrm{~F}$
- Lead spacing: 10.2 - 25.4 mm
- Capacitance tolerance: $\mathrm{M}= \pm 20 \%$ (for $\mathrm{C} \leq 0.1 \mu \mathrm{~F}$ ), $\mathrm{K}= \pm 10 \%$ (for C > $0.1 \mu \mathrm{~F}$ )
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,150 VDC
- The highest possible safety regarding active and passive flammability
- Excellent self-healing properties ensure long life even when subjected to frequent over voltages
- Good resistance to ionization due to impregnated dielectric
- High dV/dt capability
- The impregnated paper ensures excellent stability and outstanding
 reliability properties, especially in applications with continuous operation

## Performance Characteristics

| Rated Voltage | 275 VAC $50 / 60 \mathrm{~Hz}$ |  |
| :---: | :---: | :---: |
| Capacitance Range | $0.001-0.6 \mu \mathrm{~F}$ |  |
| Capacitance Tolerance | $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$ |  |
| Climatic Category | 40/110/56 |  |
| Approvals | ENEC, UL, cUL |  |
| Dissipation Factor | Maximum Values at $+23^{\circ} \mathrm{C}$ |  |
|  | 1 kHz | 1.3\% |
| Test Voltage Between Terminals | The 100\% screening factory test is carried out at 2,150 VDC. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |  |
| Insulation Resistance | Minimum Values Between Terminals |  |
|  | $\mathrm{C} \leq 0.33 \mu \mathrm{~F}$ | $\geq 12,000 \mathrm{M} \Omega$ |
|  | $\mathrm{C}>0.33 \mu \mathrm{~F}$ | $\geq 4,000 \mathrm{M} \Omega \cdot \mu \mathrm{F}$ |
| In DC Applications | Recommended voltage $\leq 630$ VDC |  |

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Endurance | EN/IEC $60384-14$ | $1.25 \times \mathrm{V}_{\mathrm{R}}$ VAC 50 Hz, once every hour increase to $1,000 \mathrm{VAC}$ for 0.1 <br> second, 1,000 hours at upper rated temperature |
| Vibration | IEC $60068-2-6$ Test Fc | 3 directions at 2 hours each $10-55 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 1,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC $60068-2-14$ Test Na | Upper and lower rated temperature 5 cycles |
| Active Flammability | IEC $60384-14$ | $\mathrm{~V}_{\mathrm{R}}+20$ surge pulses at 2.5 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle-flame test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \%$ RH, 56 days |

## Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
|  | EN/IEC 60384-14 | SE/0140-16C |
|  | UL 1414 (up to $1 \mu \mathrm{~F}, 85^{\circ} \mathrm{C}, 250 \mathrm{VAC}$ ) | E73869 |
|  | $\begin{gathered} \text { CSA }-\mathrm{C} 22.2 \text { No. } 1 \\ \text { (up to } 1 \mu \mathrm{~F}, 85^{\circ} \mathrm{C}, 250 \mathrm{VAC} \text { ) } \end{gathered}$ | E73869 |
|  | UL 1283 (310 VAC) | E100117 |

## Environmental Compliance

All KEMET EMI capacitors are RoHS Compliant.

RoHS Compliant

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

## Marking

- KEMET's logo
- Series
- Capacitance
- Capacitance tolerance
- Rated voltage
- Capacitor class
- Approval marks
- Manufacturing date code
- IEC climatic category
- Passive flammability class
- Manufacturing plant

# PME264 Series Metallized Impregnated Paper, Class X2, 660 VAC 

## Overview

The PME264 Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use in electromagnetic interference suppression in all X2 and across-the-line applications. These capacitors are also for use in high AC and DC voltage applications such as commutator capacitor in converters and ignition circuits.

## Benefits

- Approvals: ENEC, UL, cUL
- Rated voltage: 660 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.001-0.1 \mu \mathrm{~F}$
- Lead spacing: 15.2-25.4 mm
- Capacitance tolerance: $\pm 20 \%$
- Climatic category: 40/85/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations

## Legacy Part Number System

| PME264 | N | B | R100 | M | R30 |

|  | Other Lead and Packaging Options |  |  |  |
|  | Tape \& Reel (Large Reel) | $\mathrm{H}_{0}=18.5+/-0.5$ | P | R19T1 |
|  |  |  |  |  |
| 25.4 | Standard Lead and Packaging Options |  |  |  |
|  | Bulk (Tray) - Short Leads | $6+0 /-1$ | C | R06 |
|  | Bulk (Bag) - Max Length Leads | $30+5 /-0$ | A | R30 |

## Benefits cont'd

- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 3,000 VDC
- The highest possible safety regarding active and passive flammability
- Excellent self-healing properties ensure long life even when subjected to frequent over-voltages
- Good resistance to ionization due to impregnated dielectric
- High dV/dt capability
- The impregnated paper ensures excellent stability and outstanding reliability properties, especially in applications with continuous operation

## Dimensions - Millimeters

| Size Code | $p$ |  | B |  | H |  | L |  | d |  |

| EL | 25.4 | +/-0.4 | 15.3 | Maximum | 22 | Maximum | 30.5 | Maximum | 1 | +/-0.05 |

Note: See Ordering Options Table for lead length (LL) options.

## Performance Characteristics

| Rated Voltage | 660 VAC $50 / 60 \mathrm{~Hz}$ |
| :---: | :---: |
| Capacitance Range | 0.001-0.1 $\mu \mathrm{F}$ |
| Capacitance Tolerance | $\pm 20 \%$ |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |
| Climatic Category | 40/85/56 |
| Approvals | ENEC, UL, CUL |
| Dissipation Factor | Maximum Values at $+23^{\circ} \mathrm{C}$ |
|  | 1 kHz |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at 3,000 VDC. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |
| Insulation Resistance | Minimum Value Between Terminals |
|  | $\geq 12,000 \mathrm{M} \Omega$ |
| In DC Applications | Recommended voltage $\leq 1,500$ VDC |

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Vibration | IEC $60068-2-6$ Test Fc | 3 directions at 2 hours each $10-55 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 4,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC $60068-2-14$ Test Na | Upper and lower rated temperature 5 cycles |
| Active Flammability | IEC $60384-14$ | $\mathrm{~V}_{\mathrm{R}}+20$ surge pulses at 2.5 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle-flame test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \%$ RH, 56 days |

## Approvals

| Mark | File Number |
| :---: | :---: |
| CTB |  |
| CE/0140-25C |  |

## Environmental Compliance

All KEMET EMI capacitors are RoHS Compliant.

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

## Marking

- KEMET's logo
- Series
- Capacitance
- Capacitance tolerance
- Rated voltage
- Capacitor class
- Approval marks
- Manufacturing date code
- IEC climatic category
- Passive flammability class
- Manufacturing plant

## Overview

The F881 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of $\mathrm{UL} 94 \mathrm{~V}-0$.

## Applications

For worldwide use as electromagnetic interference (EMI) suppression in all "line to earth" applications requiring Y2 safety classification.

## Benefits

- Approvals: ENEC, UL, cUL, CQC
- Rated voltage: 300 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.01-1.0 \mu \mathrm{~F}$
- Lead spacing: $22.5-37.5 \mathrm{~mm}$
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 4,000 VDC and 2,500 VAC

## Performance Characteristics

| Rated Voltage | 300 VAC $50 / 60 \mathrm{~Hz}$ |  |  |
| :---: | :---: | :---: | :---: |
| Capacitance Range | $0.01-1.0 \mu \mathrm{~F}$ |  |  |
| Capacitance Tolerance | $\pm 20 \%, \pm 10 \%, \pm 5 \%$ on request |  |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$ |  |  |
| Climatic Category | 40/110/56 |  |  |
| Approvals | ENEC, UL, cUL, CQC |  |  |
| Dissipation Factor | Maximum Values at $+23^{\circ} \mathrm{C}$ |  |  |
|  |  | $\mathrm{C} \leq 0.1 \mu \mathrm{~F}$ | $C>0.1 \mu \mathrm{~F}$ |
|  | 1 kHz | 0.3\% | 0.2\% |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at 4,000 VDC and $2,500 \mathrm{VAC}$. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |  |  |
| Insulation Resistance | Minimum Values Between Terminals |  |  |
|  | $\mathrm{C} \leq 0.33 \mu \mathrm{~F}$ | $\geq 30,000 \mathrm{M} \Omega$ |  |
|  | C $>0.33 \mu \mathrm{~F}$ | $\geq 10,000 \mathrm{M} \Omega \cdot \mu \mathrm{F}$ |  |
| In DC Applications | Recommended voltage $\leq 1,000$ VDC |  |  |

## Impedance Graph

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Endurance | IEC $60384-14$ | $1.7 \times V_{R}$ VAC 50 Hz, once every hour increase to $1,000 \mathrm{VAC}$ for 0.1 second, |
| Vibration | IEC $60068-2-6$ Test Fc | 3 directions at 2 hours each $10-55 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 1,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Change of Temperature | IEC $60068-2-14$ Test Na | Upper and lower rated temperature 5 cycles |
| Active Flammability | IEC $60384-14$ | $V_{R}+20$ surge pulses at 5 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle-flame test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \%$ RH, 56 days |

## Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
|  | EN/IEC 60384-14 | CA08.00185 |
|  | UL 60384-14 and CAN/CSA- | E97797 |
|  | E60384-14 |  |
|  |  | CQC12001081968 |
|  |  | CQC12001081972 |

## Environmental Compliance

All new KEMET EMI capacitors are RoHS Compliant and Halogen Free.

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert through- hole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Wave Soldering Recommendations

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}$ $\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

## Overview

The R41 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

For worldwide use in electromagnetic interference (EMI) suppression in all Y2 and across-the-line applications. Intended for use in situations where capacitor failure would not result in exposure to electric shock. Not for use in "series with mains" type applications.

## Benefits

- Approvals: ENEC, UL, cUL, CQC
- Class Y2 / X1 (IEC 60384-14)
- Rated voltage: 300 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.001-1 \mu \mathrm{~F}$
- Lead spacing: 7.5 - 37.5 mm ( 7.5 mm in progress)
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%$
- Climatic category: 40/110/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at $5,000 \mathrm{VDC} / 2,500 \mathrm{VAC}$
- Self-healing properties

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of $\mathrm{SnAuCu}(\mathrm{SAC})$ alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of $183^{\circ} \mathrm{C}$ for SnPb eutectic alloy to $217-221^{\circ} \mathrm{C}$ for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is $160-170^{\circ} \mathrm{C}$ ). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm ), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert throughhole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

## Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Recommended Soldering Temperature

The soldering iron tip temperature should be set at $350^{\circ} \mathrm{C}\left(+10^{\circ} \mathrm{C}\right.$ maximum) with the soldering duration not to exceed more than 3 seconds.

## Wave Soldering Recommendations

Figure 1

| Dielectric <br> Film Material | Maximum Preheat <br> Temperature |  | Maximum <br> Peak Soldering <br> Temperature |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Soldering Process cont'd

## Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, however, instead of two baths, there is only one bath with a time from 3 to 10 seconds. In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

# PME271Y Series Metallized Impregnated Paper, Class Y2, 250 VAC 

## Overview

The PME271Y Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of $\mathrm{UL} 94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use as electromagnetic interference suppressor in all Y 2 applications, line-to-earth.

## Benefits

- Approvals: ENEC, UL, CSA, CQC
- Rated voltage: 250 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.001-0.1 \mu \mathrm{~F}$
- Lead spacing: 10.2 - 25.4 mm
- Capacitance tolerance: $\pm 20 \%$
- Climatic category: 40/100/56/B, IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+100^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 3,000 VDC
- Highest possible safety regarding active and passive flammability
- Excellent self-healing properties ensure long life even when subjected to frequent over-voltages
- Good resistance to ionization due to impregnated dielectric
- High dV/dt capability
- Impregnated paper ensures excellent stability and reliability properties, particularly in applications with continuous operation

## Performance Characteristics

| Rated Voltage | 250 VAC $50 / 60 \mathrm{~Hz}$ |  |
| :---: | :---: | :---: |
| Capacitance Range | $0.001-0.1 \mu \mathrm{~F}$ |  |
| Capacitance Tolerance | $\pm 20 \%$ |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+100^{\circ} \mathrm{C}$ |  |
| Climatic Category | 40/100/56/B |  |
| Approvals | ENEC, UL, CSA, CQC |  |
| Dissipation Factor | Maximum Values at $+23^{\circ} \mathrm{C}$ |  |
|  | 1 kHz | 1.3\% |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at $3,000 \mathrm{VDC}$. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |  |
| Insulation Resistance | Minimum Value Between Terminals |  |
|  | $\geq 12,000 \mathrm{M} \Omega$ |  |
| In DC Applications | Recommended voltage $\leq 1,000 \mathrm{VDC}$ |  |

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Vibration | IEC 60068-2-6 Test Fc | 3 directions at 2 hours each $10-500 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 4,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Solderability | IEC $60068-2-20$ Test Ta | Solder globule method |
| Active Flammability | IEC 60384-14 |  |
| Passive Flammability | IEC $60384-14$ | Needle-flame test |
| Humidity | IEC $60068-2-3$ Test Ca | $+40^{\circ} \mathrm{C}$ and $90-95 \% \mathrm{RH}$ |

## Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
|  | EN/IEC 60384-14 | SE/0140-27C |
|  | UL 1283 (250 VAC) | E100117 |
|  | CSA - C22.2 No. 8 (250 VAC) | E100117 |
|  | CQC | 10001043355 |

## Environmental Compliance

All KEMET EMI capacitors are RoHS Compliant.

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

# PME271Y A-E Series Metallized Impregnated Paper, Class Y2, 300 VAC 

## Overview

The PME271Y A-E Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of $\mathrm{UL} 94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use as electromagnetic interference suppressor in all Y2 applications, line-to-earth.

## Benefits

- Approvals: ENEC, UL, CSA, CQC
- Rated voltage: 300 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.001-0.15 \mu \mathrm{~F}$
- Lead spacing: 10.2 - 25.4 mm
- Capacitance tolerance: $\pm 20 \%$ for $\mathrm{C}>0.1 \mu \mathrm{~F}, \pm 10 \%$ for $\mathrm{C} \leq 0.1 \mu \mathrm{~F}$
- Climatic category: 40/115/56/B, IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+115^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 3,000 VDC
- The highest possible safety regarding active and passive flammability
- Excellent self-healing properties ensure long life even when subjected to frequent over-voltages
- Good resistance to ionization due to impregnated dielectric
- High dV/dt capability
- Impregnated paper ensures excellent
 stability and reliability properties, particularly in applications with continuous operation

## Performance Characteristics

| Rated Voltage | 300 VAC $50 / 60 \mathrm{~Hz}$ |  |
| :---: | :---: | :---: |
| Capacitance Range | $0.001-0.15 \mu \mathrm{~F}$ |  |
| Capacitance Tolerance | $\pm 20 \%$ for C $\leq 0.1 \mu \mathrm{~F}, \pm 10 \%$ for $\mathrm{C}>0.1 \mu \mathrm{~F}$ |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+115^{\circ} \mathrm{C}$ |  |
| Climatic Category | 40/115/56/B |  |
| Approvals | ENEC, UL, CSA, CQC |  |
| Dissipation Factor | Maximum Values at $+23^{\circ} \mathrm{C}$ |  |
|  | 1 kHz | 1.3\% |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at $3,000 \mathrm{VDC}$. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. It is not permitted to repeat this test as there is a risk to damage the capacitor. KEMET is not liable in such case for any failures. |  |
| Insulation Resistance | Minimum Value Between Terminals |  |
|  | $\geq 12,000 \mathrm{M} \Omega$ |  |
| In DC Applications | Recommended voltage $\leq 1,000 \mathrm{VDC}$ |  |

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Vibration | IEC $60068-2-6$ Test Fc | 3 directions at 2 hours each $10-500 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 4,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Solderability | IEC $60068-2-20$ Test Ta | Solder globule method |
| Active Flammability | IEC 60384-14 |  |
| Passive Flammability | IEC 60384-14 | Needle-flame test |
| Humidity | IEC 60068-2-3 Test Ca | $+40^{\circ} \mathrm{C}$ and $90-95 \% \mathrm{RH}$ |

Approvals

| Mark | Specification | File Number |
| :---: | :---: | :---: |
|  | EN/IEC 60384-14 | SE/0140-27C |
| $\mathrm{C} 5 \mathrm{US}$ | UL 1283 (250 VAC) | E100117 |
|  | CSA - C22.2 No. 8 (250 VAC) | E100117 |
|  | CQC | 10001043354 |

## Environmental Compliance

All KEMET EMI capacitors are RoHS Compliant.

RoHS Compliant

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

## Marking

- KEMET's logo
- Series
- Capacitance
- Rated voltage
- Capacitor class
- Approval marks
- IEC climatic category
- Passive flammability class
- Manufacturing date code
- SH for self-healing

# SMP253 Series Metallized Impregnated Paper, Class Y2, 250 VAC, Surface Mount Device 

CHARGED.

## Overview

The SMP253 Series is constructed of multilayer metallized paper, encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use as electromagnetic interference suppressor in all Y2 applications, line-to-earth.

## Benefits

- Approvals: S, UL, CSA
- Rated voltage: 250 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.001-0.0047 \mu \mathrm{~F}$
- Size code: 5045, 12.7 mm
- Capacitance tolerance: $\pm 20 \%$
- Climatic category: 40/100/56/B, IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-3
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+100^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 3,000 VDC
- Highest possible safety regarding active and passive flammability
- Excellent self-healing properties ensure long life even when subjected to frequent over voltages
- Good resistance to ionization due to impregnated dielectric
- High dV/dt capability
- Impregnated paper ensures excellent stability and reliability properties, particularly in applications with continuous operation

## Soldering Process

Reflow soldering temperature shall be measured on the top body surface of the component. The profiles herewith are recommended soldering profiles for convection reflow ovens and IR reflow ovens. If vapor phase reflow oven is used, please consult KEMET. Exceeding the manufacturer's process recommendations may harm the component. KEMET is not liable for any defect caused by exceeding recommendations. According to international standards, the maximum temperature capability shall be measured on the top surface of a component. The international standards do not define how the thermocouple should be fastened on the component. Our recommendation for attaching the thermocouple on the top surface of the component is to glue it with high temperature resistant glue.

# PME295 Series Metallized Impregnated Paper, Class Y1, 440 VAC/480 VAC 

## Overview

The PME295 Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include safety capacitors for bridging of double or reinforced insulation applications requiring voltage test up to 4,000 VAC at 60 seconds. PME295 Series capacitors can be left in place during this test.

## Benefits

- Approvals: ENEC, UL, cUL
- Rated voltage: 440 VAC/480 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $470-4700 \mathrm{pF}$
- Lead spacing: 15.0 mm
- Capacitance tolerance: $\pm 20 \%$
- Climatic category: 40/115/56/B, IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+115^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at $4,000 \mathrm{VAC}, 50 \mathrm{~Hz}, 2$ seconds
- Highest possible safety regarding active and passive flammability
- Excellent self-healing properties ensure long life even when subjected to frequent over voltages
- Good resistance to ionization due to
 impregnated dielectric
- High dV/dt capability
- Impregnated paper provides excellent stability and reliability properties, particularly in applications with continuous operation

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

# P295 Series Metallized Impregnated Paper, Class Y1, 500 VAC 

## Overview

The P295 Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include safety capacitors for bridging of double or reinforced insulation applications requiring voltage test up to 4,000 VAC at 60 seconds. P295 Series capacitors can be left in place during this test.

## Benefits

- Approvals: ENEC, UL, cUL
- Rated voltage: 500 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $470-4,700 \mathrm{pF}$
- Lead spacing: 15.0 mm
- Capacitance tolerance: $\pm 20 \%$
- Climatic category: 40/115/56/B, IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+115^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at $4,000 \mathrm{VAC}, 50 \mathrm{~Hz}, 2$ seconds
- Highest possible safety regarding active and passive flammability
- Excellent self-healing properties ensure long life even when subjected to frequent over voltages
- Good resistance to ionization due to impregnated dielectric
- High dV/dt capability
- Impregnated paper provides excellent stability and reliability properties, particularly in applications with continuous operation

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

# PZB300 Series Metallized Impregnated Paper, 275 VAC Delta Configuration X2 + 2x Y2 

CHARGED.

## Overview

The PZB300 Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include interference suppressors with X2 + $2 x$ Y2 capacitors in a delta configuration.

## Benefits

- Approvals: ENEC, UL, CSA
- Rated voltage: 275 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance X Value: $0.1 \mu \mathrm{~F}$ and $0.15 \mu \mathrm{~F}$
- Capacitance $Y$ Value: $0.0022 \mu \mathrm{~F}, 0.0033 \mu \mathrm{~F}$ and $0.0047 \mu \mathrm{~F}$
- Lead spacing: 20 mm
- Capacitance tolerance: $\pm 20 \%$
- Climatic category: 40/100/56/B, IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+100^{\circ} \mathrm{C}$

## Benefits cont'd

- $100 \%$ screening Factory Test at 2,150 VDC for X2 capacitors and 3,000 VDC for Y2 capacitors
- Excellent self-healing properties ensure long life even when subjected to frequent over voltages
- Good resistance to ionization due to impregnated paper dielectric
- High dV/dt capability
- Impregnated paper ensures excellent stability and reliability properties, particularly in applications with continuous operation

## Dimensions - Millimeters

# PMZ2074 Series Metallized Impregnated Paper, 275 VAC 2x X2 with One Common Terminal 

## Overview

The PMZ2074 Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use as an electromagnetic interference suppressor in all X2, across-the-line applications or other demanding applications where two capacitors are utilized in series.

## Benefits

- Approvals: ENEC
- Rated voltage: 275 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance: $0.15 \mu \mathrm{~F}+0.033 \mu \mathrm{~F}, 0.15 \mu \mathrm{~F}+0.047 \mu \mathrm{~F}, 0.15 \mu \mathrm{~F}+$ $0.068 \mu \mathrm{~F}, 0.22 \mu \mathrm{~F}+0.082 \mu \mathrm{~F}, 0.22 \mu \mathrm{~F}+0.1 \mu \mathrm{~F}$
- Lead spacing: 20.3 mm
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%$
- Climatic category: 40/110/56/B, IEC 60068-1
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+110^{\circ} \mathrm{C}$
- $100 \%$ screening factory test at 2,150 VDC
- Highest possible safety regarding active and passive flammability
- Excellent self-healing properties ensure long life even when subjected to frequent over voltages
- Good resistance to ionization due to impregnated paper dielectric

- High dV/dt capability
- Impregnated paper ensures excellent stability and reliability properties, particularly in applications with continuous operation

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

# PHZ9004 Series Metallized Polypropylene Film, 300 VAC $3 x$ X2 with Separate Terminals for Three-Phase Filtering 

## Overview

The PHZ9004 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use as an electromagnetic interference suppressor in X2 and across-the-line applications for three phases.

## Benefits

- Rated voltage: 300 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $3 \times 1.0 \mu \mathrm{~F}$
- Lead spacing: 27.5 mm
- Capacitance tolerance: $\pm 20 \%$, other tolerances on request
- Climatic category: 55/105/56, IEC 60068-1
- Tape and reel in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-55^{\circ} \mathrm{C}$ to $+105^{\circ} \mathrm{C}$

- $100 \%$ screening factory test at 2,200 VDC

# F43 Series Metallized Polypropylene Film, 160 VAC/250 VDC, KE//EI 200 VAC/400 VDC, 220 VAC/630 VDC \& Class X2, 275 VAC 

## Overview

The F43 Series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use in contact protection, contact interference suppression and transient suppression.

## Benefits

- Approvals (for 275 VAC only): ENEC, UL
- Rated voltage: 160 VAC/250 VDC, 200 VAC/400 VDC, 220 VAC/630 VDC, and Class X2, 275 VAC
- Capacitance range: $0.01-1.0 \mu \mathrm{~F}$
- Lead spacing: 15.0 - 27.5 mm
- Capacitance tolerance: $\pm 20 \%, \pm 10 \%$
- Climatic category: 55/100/56, IEC 60068-1 and 40/100/56 (275 VAC), IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range: $-55^{\circ} \mathrm{C}$ to $+100^{\circ} \mathrm{C}$ and $-40^{\circ} \mathrm{C}$ to $+100^{\circ} \mathrm{C}$ (275 VAC)

${ }^{3}$ E12 values are multiples of 10 in the following range: $10,12,15,18,22,27,33,39,47,56,68,82$. The standard resistance tolerance is $10 \%$.

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

## Marking

- KEMET's logo
- Series
- Capacitance
- Rated resistance
- Rated voltage
- Capacitor class
- Approval marks
- IEC climatic category
- Passive flammability class
- Manufacturing date code

## Mounting

RC units are mounted in parallel with the contacts to be protected or in parallel with the inductive load (Fig. 1 and Fig. 2). RC units are generally mounted in parallel with the contacts to suppress radio interferences (Fig. 1).

Fig. 1

Fig. 2

# PMR205 Series Metallized Impregnated Paper, 125 VAC/250 VDC 

## Overview

The PMR205 Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of $\mathrm{UL} 94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use in contact protection, contact interference suppression and transient suppression.

## Benefits

- Rated voltage: $125 \mathrm{VAC} / 250 \mathrm{VDC}, 50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.1-1.0 \mu \mathrm{~F}$
- Capacitance tolerance: $\pm 20 \%$
- Resistance range: $22-680 \Omega$
- Resistance tolerance: $\pm 30 \%$
- Lead spacing: $15.2-25.4 \mathrm{~mm}$
- Climatic category: 40/085/56/B, IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$
- Excellent self-healing properties which ensure long life even when subjected to frequent over voltages
- Good resistance to ionization due to impregnated paper dielectric
- High dV/dt capability
- Impregnated paper ensures excellent stability and reliability properties, particularly in applications with continuous operation

# PMR209 Series Metallized Impregnated Paper, Class X2, 250 VAC 

## Overview

The PMR209 Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use in contact protection, contact interference suppression and transient suppression.

## Benefits

- Approvals: ENEC, UL, cUL
- Rated voltage: 250 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.047-0.47 \mu \mathrm{~F}$
- Capacitance tolerance: $\pm 20 \%$
- Resistance range: $22-470 \Omega$
- Resistance tolerance: $\pm 30 \%$
- Lead spacing: 15.2-25.4 mm
- Climatic category: 40/085/56/B, IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$
- Excellent self-healing properties which ensure long life even when subjected to frequent over voltages
- Good resistance to ionization due to impregnated paper dielectric
- High dV/dt capability
- Impregnated paper ensures excellent stability and reliability properties, particularly in applications with continuous operation

## Performance Characteristics

| Rated Voltage | 250 VAC $50 / 60 \mathrm{~Hz}$ |  |
| :---: | :---: | :---: |
| Capacitance Range | $0.047-0.47 \mu \mathrm{~F}$ |  |
| Capacitance Tolerance | $\pm 20 \%$ |  |
| Resistance Range | 22-470 $\Omega$ |  |
| Resistance Tolerance | $\pm 30 \%$ |  |
| Temperature Range | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |  |
| Climatic Category | 40/085/56/B |  |
| Approvals | ENEC, UL, cUL |  |
| Peak Pulse Voltage | 1,000 V |  |
| Series Resistance | The series resistance is defined at 1 kHz for $\mathrm{RC} \geq 50 \mu \mathrm{~s}$ and at 100 kHz for $\mathrm{RC}<50 \mu \mathrm{~s}$ |  |
| Insulation Resistance | Minimum Values Between Terminals |  |
|  | $\mathrm{C} \leq 0.33 \mu \mathrm{~F}$ | $\geq 3,000 \mathrm{M} \Omega$ |
|  | $\mathrm{C}>0.33 \mu \mathrm{~F}$ | $\geq 1,000 \mathrm{M} \Omega \cdot \mu \mathrm{F}$ |
| Pulse Current | Maximum 12 A repetitive. Maximum 20 A peak for occasional transients. |  |
| Test Voltage Between Terminals | The $100 \%$ screening factory test is carried out at 1,800 VDC. The voltage level is selected to meet the requirements in applicable equipment standards. All electrical characteristics are checked after the test. |  |
| In DC Applications | Recommended voltage $\leq 630 \mathrm{VDC}$ |  |
| Power Ratings | The average losses may reach 0.5 W provided the surface temperature does not exceed $+85^{\circ} \mathrm{C}$. For maximum permitted power dissipation vs. temperature, see Derating Curves. |  |
| Derating Curves |  | Ambient Temperature and |
|  | Curve | Dimension B (mm) |
|  | 1 | 7.3 |
|  | 2 | 7.6 |
|  | 3 | 11.3 |
|  | 4 | 15.3 |

## Environmental Test Data

| Test | IEC Publication | Procedure |
| :---: | :---: | :--- |
| Vibration | IEC $60068-2-6$ Test Fc | 3 directions at 2 hours each $10-500 \mathrm{~Hz}$ at 0.75 mm or $98 \mathrm{~m} / \mathrm{s}^{2}$ |
| Bump | IEC $60068-2-29$ Test Eb | 4,000 bumps at $390 \mathrm{~m} / \mathrm{s}^{2}$ |
| Solderability | IEC $60068-2-20$ Test Ta | Wetting time d or $\mathrm{d}>0.8<1.5$ seconds |
| Active Flammability | IEC $60384-14$ | $V_{R}+20$ surge pulses at 2.5 kV (pulse every 5 seconds) |
| Passive Flammability | IEC $60384-14$ | IEC $60384-1$, IEC $60695-11-5$ Needle-flame test |
| Damp Heat Steady State | IEC $60068-2-78$ Test Cab | $+40^{\circ} \mathrm{C}$ and $93 \%$ RH, 56 days |

## Approvals

| Certification Body | Mark | Specification | File Number |

## Soldering Process

The implementation of the RoHS Directive has required the use of SnAuCu (SAC) or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

## Overview

The P409 Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use in contact protection, contact interference suppression and transient suppression.

## Benefits

- Approvals: ENEC, UL, cUL
- Rated voltage: 275 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.047-0.47 \mu \mathrm{~F}$
- Capacitance tolerance: $\pm 20 \%$
- Resistance range: $22-470 \Omega$
- Resistance tolerance: $\pm 30 \%$
- Lead spacing: 15.2-25.4 mm
- Climatic category: 40/085/56/B, IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations

- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$
- Excellent self-healing properties which ensure long life even when subjected to frequent over voltages
- Good resistance to ionization due to impregnated paper dielectric
- High dV/dt capability
- Impregnated paper ensures excellent stability and reliability properties, particularly in applications with continuous operation

## Mounting

$R C$ units are mounted in parallel with the contacts to be protected or in parallel with the inductive load (Fig. 1 and Fig. 2). RC units are generally mounted in parallel with the contacts to suppress radio interferences (Fig. 1).

# PMR210 Series Metallized Impregnated Paper, Class X1, 250 VAC 

## Overview

The PMR210 Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use in contact protection, contact interference suppression and transient suppression.

## Benefits

- Approvals: ENEC, UL, cUL
- Rated voltage: 250 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.022-0.1 \mu \mathrm{~F}$
- Capacitance tolerance: $\pm 20 \%$
- Resistance range: $100 \Omega$
- Resistance tolerance: $\pm 30 \%$
- Lead spacing: 15.2-25.4 mm
- Climatic category: 40/085/56/B, IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$
- Excellent self-healing properties which ensure long life even when subjected to frequent over voltages
- Good resistance to ionization due to impregnated paper dielectric
- High dV/dt capability
- Impregnated paper ensures excellent stability and reliability properties, particularly in applications with continuous operation

(1) Insert lead and packaging code. See Ordering Options Table for available options.

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

## Overview

The P410 Series is constructed of multilayer metallized paper encapsulated and impregnated in self-extinguishing material meeting the requirements of UL $94 \mathrm{~V}-0$.

## Applications

Typical applications include worldwide use in contact protection, contact interference suppression and transient suppression.

## Benefits

- Approvals: ENEC, UL, cUL
- Rated voltage: 300 VAC $50 / 60 \mathrm{~Hz}$
- Capacitance range: $0.022-0.1 \mu \mathrm{~F}$
- Capacitance tolerance: $\pm 20 \%$
- Resistance range: $100 \Omega$
- Resistance tolerance: $\pm 30 \%$
- Lead spacing: 15.2-25.4 mm
- Climatic category: 40/085/56/B, IEC 60068-1
- Tape and reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations

- Operating temperature range of $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$
- Excellent self-healing properties which ensure long life even when subjected to frequent over-voltages
- Good resistance to ionization due to impregnated paper dielectric
- High dV/dt capability
- Impregnated paper ensures excellent stability and reliability properties, particularly in applications with continuous operation

All KEMET EMI capacitors are RoHS Compliant.

Table 1 - Ratings \& Part Number Reference

| Lead Space | Capacitance Value ( $\mu \mathrm{F}$ ) | Resistance $\Omega$ | Maximum Dimensions (mm) |  |  | Quantity per Package |  | F Article Code | Part Number |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | B | H | L | R06 | R30 |  |  |
| 25.4 | 0.1 | 150 | 12.1 | 19 | 30.5 | 100 | 800 | P435EJ104K440(1)H151 | PMZ2035RE6100K150(1) |

(1) Insert lead and packaging code. See Ordering Options Table for available options.

## Soldering Process

The implementation of the RoHS Directive has required the use of $\mathrm{SnAuCu}(\mathrm{SAC})$ or SnCu alloys as primary solder. These alloys require a higher liquidus temperature $\left(217^{\circ} \mathrm{C}-221^{\circ} \mathrm{C}\right)$ as compared to SnPb eutectic alloy $\left(183^{\circ} \mathrm{C}\right)$. Due to the higher pre-heat and wave temperatures, the heat stress to components has increased considerably. Polypropylene capacitors are especially sensitive to soldering temperature due to the relatively low melting point of polypropylene material $\left(160^{\circ} \mathrm{C}-170^{\circ} \mathrm{C}\right)$. As a result, wave soldering can be destructive, especially to mechanically small polypropylene capacitors with lead spacings of $5-10 \mathrm{~mm}$. For more information, please refer to KEMET's Recommended Soldering Profiles or contact a KEMET representative. IEC Publication 61760-1 Edition 2 may also be consulted for general guidelines.

## Lead Taping \& Packaging for Pxxx, PMExxx \& PMRxxx (IEC 60286-2)

Lead Spacing 10.2-15.2 mm

Lead Spacing 20.3-22.5 mm

Formed Leads from 10.2 to 7.5 mm

## Taping Specification

| Dimensions in mm |  |  |  |  |  |  |  | Standard IEC 60286-2 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Lead spacing | +6/-0.1 | F | Formed 7.5 | 10.2 | 15.2 | 20.3 | 22.5 | F |
| Carrier tape width | +/-0.5 | W | 18 | 18 | 18 | 18 | 18 | $18^{+1 / 0.5}$ |
| Hold-down tape width | +/-0.3 | W0 | 9 | 12 | 12 | 12 | 12 |  |
| Position of sprocket hole | +/-0.5 | W | 9 | 9 | 9 | 9 | 9 | $9^{+0.75-0.5}$ |
| Distance between tapes | Maximum | $\mathrm{W}_{2}$ | 3 | 3 | 3 | 3 | 3 | 3 |
| Sprocket hole diameter | +/-0.2 | $\mathrm{D}_{0}$ | 4 | 4 | 4 | 4 | 4 | 4 |
| Feed hole lead spacing | +/-0.3 | $P_{0}{ }^{(1)}$ | $12.7{ }^{(4)}$ | 12.7 | 12.7 | 12.7 | 12.7 | 12.7 |
| Distance lead - feed hole | +/-0.7 | $\mathrm{P}_{1}$ | 3.75 | 7.6 | 5.1 | 8.9 | 5.3 | $\mathrm{P}^{1}$ |
| Deviation tape - plane | Maximum | $\Delta \mathrm{p}$ | 1.3 | 1.3 | 1.3 | 1.3 | 1.3 | 1.3 |
| Lateral deviation | Maximum | $\Delta \mathrm{h}$ | 2 | 2 | 2 | 2 | 2 | 2 |
| Total thickness | +/-0.2 | t | 0.7 | 0.7 | 0.7 | 0.7 | 0.9 max | $0.9{ }^{\text {max }}$ |
| Sprocket hole/cap body | Nominal | $\mathrm{H}_{0}{ }^{(2)}$ | $18^{+2 / 0}$ | $18^{+21-0}$ | $18{ }^{+21.0}$ | $18^{+21-0}$ | $18.5^{++0.5}$ | $18^{+2 / 0}$ |
| Sprocket hole/top of cap body | Maximum | $\mathrm{H}_{1}{ }^{(3)}$ | 35 | 35 | 35 | 35 | 58 | $58{ }^{\text {MAX }}$ |

(1) Maximum cumulative feed hole error, 1 mm per 20 parts.
(3) Depending on case size.
(2) 16.5 mm available on request.
(4) 15 mm available on request.

## Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed.
All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.
Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute - and KEMET specifically disclaims - any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicted or that other measures may not be required.
