# PHE844, Class X1, 440/480 VAC, 105°C

### **Overview**

The PHE844 series is constructed of metallized polypropylene film encapsulated with self-extinguishing resin in a box of material that meets the requirements of UL 94 V-0.

### **Applications**

For use as an electromagnetic interference (EMI) suppression filter in across-the-line applications that require X1 safety classification. Suitable for use in situations in which capacitor failure does not pose a danger of electric shock.

### **Benefits**

- Approvals: ENEC, UL, cUL
- Class X1 (IEC 60384-14)
- THB Grade IA: 40°C, 93% RH, 500 hours at 480 V URAC acc. to IEC 60384-14
- Rated voltage: 440 VAC 50/60 Hz (ENEC), 480 VAC 50/60 Hz (UL, cUL)
- Capacitance range: 0.1 2.2 μF
  Lead spacing: 22.5 37.5 mm
- Capacitance tolerance: ±20%, ±10%
- Climatic category 40/105/56/B, IEC 60068-1
- Tape & Reel in accordance with IEC 60286-2
- · RoHS Compliant and lead-free terminations
- Operating temperature range of -40°C to +105°C
- 100% screening factory test at 3,000 VDC
- · Self-healing properties

### **Soldering Process**

The implementation of the RoHS directive has resulted in the selection of SnAuCu (SAC) alloys or SnCu alloys as primary solder. This implementation has increased the liquidus temperature from 183°C for SnPb eutectic alloys to 217 – 221°C for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is 160 – 170°C). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 – 15 mm), and great care must be taken during soldering. The recommended solder profiles from KEMET should be used. Consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. See Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the recommended limits may result in degradation of or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface-mount components. Insert through-hole parts after curing the surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum of two soldering cycles is recommended. Allow time for the capacitor surface temperature to return to normal before the second soldering cycle.

#### **Manual Soldering Recommendations**

Following is the recommendation for manual soldering with a soldering iron.

#### Recommended Soldering Temperature

Soldering iron tip temperature should be set at 350°C (+10°C maximum), with the soldering duration not to exceed 3 seconds.

#### **Wave Soldering Recommendations**

### **Soldering Process cont.**

#### **Wave Soldering Recommendations cont.**

1. The table indicates the maximum set-up temperature of the soldering process. Figure 1

Dielectric film		n Preheat erature	Maximum Peak Soldering Temperature			
material	Capacitor Pitch ≥ 10 mm	Capacitor Pitch > 15 mm	Capacitor Pitch ≤ 15 mm	Capacitor Pitch > 15 mm		
Polyester	130°C	130°C	270°C	270°C		
Polypropylene	110°C 130°C		260°C	270°C		
Paper	130°C	140°C	270°C	270°C		
Polyphenylene Sulphide	150°C	160°C	270°C	270°C		

2. The maximum temperature measured inside the capacitor: set the temperature so that the maximum temperature is below the limit inside the element.

Dielectric Film Material	Maximum Temperature Measured Inside the Element
Polyester	160°C
Polypropylene	110°C
Paper	160°C
Polyphenylene Sulphide	160°C

Temperature monitored inside the capacitor.

#### **Selective Soldering Recommendations**

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath, as in normal flow soldering, without touching the solder. When the board is over the bath, it is stopped. Pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and then pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double-wave flow soldering outlined in this document. **However, instead of two baths, there is only one with a time from 3 to 10 seconds.** In selective soldering, the risk of overheating is greater than in double-wave flow soldering. Great care must be taken so that the parts do not overheat.

## Lead Taping & Packaging (IEC 60286-2)

### **Lead Spacing 22.5 - 27.5 mm**

# **Taping Specification**

Description	Symbol	Dimensions (mm)		
		Lead Space		Tolerance
		22.5	27.5	Tolerance
Lead Spacing	F	22.5	27.5	+0.6/-0.1
Carrier Tape Width	W	18	18	+1/-0.5
Hold Down Tape Width	W <sub>o</sub>	5	5	Minimum
Hole Position	W <sub>1</sub>	9	9	+0.75/-0.5
Hold Down Tape Position	W <sub>2</sub>	3	3	Maximum
Feed Hole Diameter	D <sub>0</sub>	4	4	±0.2
Feed-hole Lead Space *	P <sub>0</sub>	12.7	12.7	±0.2 **
Centering of the Lead Wire	P <sub>1</sub>	7.8	5.3	±0.7
Component Alignment	Δh	2	2	±2
Deviation Tape - Plane	Δр	1.3	1.3	Maximum
Tape Thickness	t	0.9	0.9	Maximum
Height of Component from Tape Center	H <sub>0</sub> ***	18.5	18.5	±0.5

<sup>\*</sup>Available also 15mm

<sup>\*\*</sup>Maximum 1 mm on 20 lead spaces

<sup>\*\*\*</sup>  $H_0$  = 16.5 mm is available upon request

#### **Disclaimer**

YAGEO Corporation and its affiliates do not recommend the use of commercial or automotive grade products for high reliability applications or manned space flight.

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.

Additional information about production site flexibility can be found <here>
