

R1218 Series

Step-up DC/DC converter for White LED Backlight

No. EA-166-230419

OUTLINE

The R1218x Series are PWM control type step-up DC/DC converter ICs with low supply current.

The R1218x is fully dedicated to drive White LED with constant current. Each of these ICs consists of an NMOS FET, an oscillator, a PWM comparator, a voltage reference unit, an error amplifier, a current limit circuit, an under voltage lockout circuit (UVLO), an over-voltage protection circuit (OVP).

The R1218x can drive white LEDs with high efficiency with low supply current. A diode is built-in the R1218xxx1A, therefore it is possible to drive up to 4LEDs without an external diode. The R1218xxx2A, an external diode is necessary, however, up to 7 serial LEDs can be driven with the R1218xxx2A.

Constant current can be set with an external resistance value. Dimming control is possible by PWM signal for CE pin. Feedback voltage is 0.2V, therefore power loss by current setting resistor is small and efficiency is good. Maximum duty cycle is internally fixed, Typ. 91% to 92%. LEDs can be driven from low voltage. Protection circuits are the current limit of Lx peak current, the over voltage limit of output, and the under voltage lockout function.

Packages are standard SOT-23-6 and very tiny DFN(PL)1820-6.

FEATURES

- Input voltage..... 1.8V to 5.5V
- Built-in 400mA, 1.5Ω, 20V Nch MOSFET and diode (R1218xxx1A)
- Built-in 400mA, 1.5Ω, 33V Nch MOSFET (R1218xxx2A)
- Oscillator Frequency (PWM control)..... 1.2MHz
- Maximum Duty Cycle Typ. 91% to 92%
- Feedback Voltage Typ. 0.2V
- UVLO Threshold Voltage Typ. 1.6V (Hysteresis Typ. 0.1V)
- Lx Current limit Protection..... Typ. 700mA
- Over Voltage Protection (OVP) Threshold.... Typ. 9.5V (R1218x021A)
Typ. 14.0V (R1218x031A)
Typ. 18.5V (R1218x041A)
Typ. 23.0V (R1218x052A)
Typ. 27.5V (R1218x062A)
Typ. 31.5V (R1218x072A)
- LED dimming control..... by external PWM signal (Frequency 200Hz to 5kHz) to CE pin
by feedback voltage and filtered PWM signal (high frequency)
- Packages DFN(PL)1820-6, SOT-23-6

APPLICATIONS

- White LED Backlight for portable equipment

SELECTION GUIDE

The OVP threshold, the built-in diode, and the package for the ICs can be selected at the user's request.

Selection Guide

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
R1218Kxxxx-TR	DFN(PL)1820-6	5,000 pcs	Yes	Yes
R1218Nxxxx-TR-FE	SOT-23-6	3,000 pcs	Yes	Yes

xxxx: The combination of the OVP threshold and with/without of built-in diode can be designated.

Code	OVP Threshold	Built-in Diode
021A	9.5 V	Yes
031A	14.0 V	Yes
041A	18.5 V	Yes
052A	23.0 V	No
062A	27.5 V	No
072A	31.5 V	No

PIN DESCRIPTIONS

DFN(PL)1820-6 Pin Configuration

SOT-23-6 Pin Configuration

DFN(PL)1820-6 Pin Description

Pin No	Symbol	Pin Description
1	CE	Chip Enable Pin ("H" Active)
2	V _{FB}	Feedback Pin
3	LX	Switching Pin (Open Drain Output)
4	GND	Ground Pin
5	V _{IN}	Power Supply Input Pin
6	V _{OUT}	Output Pin

SOT-23-6 Pin Description

Pin No	Symbol	Pin Description
1	CE	Chip Enable Pin ("H" Active)
2	V _{OUT}	Output Pin
3	V _{IN}	Power Supply Input Pin
4	LX	Switching Pin (Open Drain Output)
5	GND	Ground Pin
6	V _{FB}	Feedback Pin

⁽¹⁾ Tab is GND level (They are connected to the reverse side of this IC). The tab is better to be connected to the GND, but leaving it open is also acceptable.

ABSOLUTE MAXIMUM RATINGS

Absolute Maximum Ratings

(GND = 0 V)

Symbol	Item		Rating	Unit	
V_{IN}	V _{IN} Pin Voltage		6.5	V	
V_{CE}	CE Pin Voltage		-0.3 to $V_{IN} + 0.3$	V	
V_{FB}	V _{FB} Pin Voltage		-0.3 to $V_{IN} + 0.3$	V	
V_{OUT}	V _{OUT} Pin Voltage	R1218xxx1A	-0.3 to 22	V	
		R1218xxx2A	-0.3 to 34		
V_{LX}	L _X Pin Voltage	R1218xxx1A	-0.3 to 22	V	
		R1218xxx2A	-0.3 to 34		
I_{LX}	L _X Pin Current		1000	mA	
P_D	Power Dissipation ⁽¹⁾	DFN(PL)1820-6	JEDEC STD. 51-7 Test Land Pattern	2200	mW
		SOT-23-6	JEDEC STD. 51-7 Test Land Pattern	660	
T_j	Junction Temperature Range		-40 to 125	°C	
T_{stg}	Storage Temperature Range		-55 to 125	°C	

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING CONDITIONS

Recommended Operating Conditions

Symbol	Item	Rating	Unit
V_{IN}	Operating Input Voltage	1.8 to 5.5	V
T_a	Operating Temperature Range	-40 to 85	°C

RECOMMENDED OPERATING CONDITIONS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

⁽¹⁾ Refer to *POWEWR DISSIPATION* for detailed information.

ELECTRICAL CHARACTERISTICS

R1218xxxxA Electrical Characteristics

(Ta = 25°C)

Symbol	Item	Conditions	Min.	Typ.	Max.	Unit	
I _{DD}	Supply Current	V _{IN} = 5.5 V, V _{FB} = 0 V, L _X at no load		0.5	1.0	mA	
I _{standby}	Standby Current	V _{IN} = 5.5 V, V _{CE} = 0 V		0	3.0	μA

			R1218x072A		V _{OVP1} - 1.75		

APPLICATION INFORMATION

• Typical Application Circuit

R1218x041A

R1218x072A

• Selection of Inductors

The peak current of the inductor at normal mode can be estimated as the next formula when the efficiency is 80%.

$$I_{Lmax} = 1.25 \times I_{OUT} \times V_{OUT} / V_{IN} + 0.5 \times V_{IN} \times (V_{OUT} - V_{IN}) / (L \times V_{OUT} \times f_{osc})$$

When the start-up or dimming control by CE pin, transient current flows, the peak current must be equal or less than the current limit of the IC. The peak current should not be beyond the rating current of the inductor. The recommended inductance value is 10 µH -22 µH.

Table 1 Peak current value in each condition

Condition				
V _{IN} (V)	V _{OUT} (V)	I _{OUT} (mA)	L (µH)	I _{Lmax} (mA)
3	14	20	10	215
3	14	20	22	160
3	21	20	10	280
3	21	20	22	225

Table 2 Recommended inductors

L (µH)	Part No.	Rated Current (mA)	Size (mm)
10	LQH32CN100K53	450	3.2 x 2.5 x 1.55
10	LQH2MC100K02	225	2.0 x 1.6 x 0.9
10	VLF3010A-100	490	2.8 x 2.6 x 0.9
10	VLS252010-100	520	2.5 x 2.0 x 1.0
22	LQH32CN220K53	250	3.2 x 2.5 x 1.55
22	LQH2MC220K02	185	2.0 x 1.6 x 0.9
22	VLF3010A-220	330	2.8 x 2.6 x 0.9

- **Selection of Capacitors**

Set 1 μF or more value bypass capacitor C1 between V_{IN} pin and GND pin as close as possible.

Set 0.22 μF or more capacitor C2 between V_{OUT} and GND pin.

Note the V_{OUT} that depends on LED used, and select the rating of V_{OUT} or more.

- **Selection of SBD (Schottky Barrier Diode)**

Select the diode with low V_{F} such as Schottky type with low reverse current I_{R} , and with low capacitance.

Table 3 Recommended components

	Rated voltage (V)	Part No.
C1	6.3	CM105B105K06
C2	25	GRM21BR11E224
	50	GRM21BR71H224
D1	30	CRS10I30A
	30	RSX051VA-30

- **LED Current setting**

LED current can be set with feedback resistor (R1)

$$I_{\text{LED}} = 0.2 / R1$$

- **LED Dimming Control, Softstart**

(1) LED dimming control by PWM signal to CE pin

LED dimming control is possible by forcing PWM signal to CE pin.

When the power-on or start up with CE pin, softstart function works, however, after that, if the CE pin is set as "L" and set CE pin "H" again during the shutdown delay time, softstart function is disabled and starts up fast to normal mode, therefore 200 Hz to 5 kHz PWM signal is standard. By the CE pin input, LED turns on and off. Average LED current varies depending on the duty cycle of CE input. Too high frequency PWM signal is not effective because of its delay.

Dimming control by CE pin input

(2) Dimming control by DC voltage

LED dimming control is also possible by using the DC voltage to V_{FB} pin. LED current is adjustable by DC voltage and resistors, R1 and R2 in the following figure.

$$I_{LED} = 0.2/R1 - (DC - 0.2)/R2$$

Dimming control by DC voltage

(3) Dimming control by feedback voltage and filtered PWM signal

LED dimming control is also possible by using the feedback voltage and filtered PWM signal.

LED current is adjustable according to the "H" level (V_H) and "L" level (V_L) of PWM signal and resistors, R1, R2, R3, and R4 in the following figure.

Dimming control by filtered PWM signal

Duty = 0% to 100% PWM signal duty cycle can be used up to the maximum LED current and minimum LED current as in the next formulas.

$$I_{LEDMIN} = \{0.2 - R2 \times (V_H - 0.2) / (R3 + R4)\} / R1$$

$$I_{LEDMAX} = \{0.2 - R2 \times (V_L - 0.2) / (R3 + R4)\} / R1$$

For example, supposed that the PWM signal level is set as 2.5 V/0 V, to adjust the LED current range from 0 mA to 20 mA by the duty cycle, our recommendation external components values are, $R1 = 10 \Omega$, $R2 = 5.1 \text{ k}\Omega$, $R3 = 51 \text{ k}\Omega$, $R4 = 5.1 \text{ k}\Omega$ or around.

C3 should be set large enough to regard the PWM signal as adjustable DC voltage by the filter. In this method, higher frequency control than the frequency against the CE pin can be used for dimming control. For example, if the frequency is 40 kHz, 0.1 μF or more capacitor is our recommendation value as C3.

TECHNICAL NOTES

●Current path on PCB

The current paths in an application circuit are shown in Fig. 1 and 2.

A current flows through the paths shown in Fig. 1 at the time of MOSFET-ON, and shown in Fig. 2 at the time of MOSFET-OFF. In the paths pointed with red arrows in Fig. 2, current flows just in MOSFET-ON period or just in MOSFET-OFF period. Parasitic impedance/inductance and the capacitance of these paths influence stability of the system and cause noise outbreak. So please minimize this side effect. In addition, please shorten the wiring of other current paths shown in Fig. 1 and 2 except for the paths of LED load.

●Layout Guide for PCB

- Please shorten the wiring of the input capacitor (C1) between VIN pin and GND pin of IC. The GND pin should be connected to the strong GND plane.
- The area of LX land pattern should be smaller.
- In the case of internal diode version, please put output capacitor (C2) close to the VOUT pin.
- In the case of external diode, the wiring between L_x pin and inductor and diode should be short and please put output capacitor(C2) close to the cathode of diode.
- Please make the GND side of output capacitor (C2) close to the GND pin of IC.

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to our sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without the prior written consent of us.
3. This product and any technical information relating thereto are subject to complementary export controls (so-called KNOW controls) under the Foreign Exchange and Foreign Trade Law, and related politics ministerial ordinance of the law. (Note that the complementary export controls are inapplicable to any application-specific products, except rockets and pilotless aircraft, that are insusceptible to design or program changes.) Accordingly, when exporting or carrying abroad this product, follow the Foreign Exchange and Foreign Trade Control Law and its related regulations with respect to the complementary export controls.
4. The technical information described in this document shows typical characteristics and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under our or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death should first contact us.
 - Aerospace Equipment
 - Equipment Used in the Deep Sea
 - Power Generator Control Equipment (nuclear, steam, hydraulic, etc.)
 - Life Maintenance Medical Equipment
 - Fire Alarms / Intruder Detectors
 - Vehicle Control Equipment (automotive, airplane, railroad, ship, etc.)
 - Various Safety Devices
 - Traffic control system
 - Combustion equipment

In case your company desires to use this product for any applications other than general electronic equipment mentioned above, make sure to contact our company in advance. Note that the important requirements mentioned in this section are not applicable to cases where operation requirements such as application conditions are confirmed by our company in writing after consultation with your company.

6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. The products have been designed and tested to function within controlled environmental conditions. Do not use products under conditions that deviate from methods or applications specified in this datasheet. Failure to employ the products in the proper applications can lead to deterioration, destruction or failure of the products. We shall not be responsible for any bodily injury, fires or accident, property damage or any consequential damages resulting from misuse or misapplication of the products.
8. **Quality Warranty**
 - 8-1. **Quality Warranty Period**

In the case of a product purchased through an authorized distributor or directly from us, the warranty period for this product shall be one (1) year after delivery to your company. For defective products that occurred during this period, we will take the quality warranty measures described in section 8-2. However, if there is an agreement on the warranty period in the basic transaction agreement, quality assurance agreement, delivery specifications, etc., it shall be followed.
 - 8-2. **Quality Warranty Remedies**

When it has been proved defective due to manufacturing factors as a result of defect analysis by us, we will either deliver a substitute for the defective product or refund the purchase price of the defective product.
Note that such delivery or refund is sole and exclusive remedies to your company for the defective product.
 - 8-3. **Remedies after Quality Warranty Period**

With respect to any defect of this product found after the quality warranty period, the defect will be analyzed by us. On the basis of the defect analysis results, the scope and amounts of damage shall be determined by mutual agreement of both parties. Then we will deal with upper limit in Section 8-2. This provision is not intended to limit any legal rights of your company.
9. Anti-radiation design is not implemented in the products described in this document.
10. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
11. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
12. Warning for handling Gallium and Arsenic (GaAs) products (Applying to GaAs MMIC, Photo Reflector). These products use Gallium (Ga) and Arsenic (As) which are specified as poisonous chemicals by law. For the prevention of a hazard, do not burn, destroy, or process chemically to make them as gas or power. When the product is disposed of, please follow the related regulation and do not mix this with general industrial waste or household waste.
13. Please contact our sales representatives should you have any questions or comments concerning the products or the technical information.
