

Is Now Part of

ON Semiconductor®

To learn more about ON Semiconductor, please visit our website at www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild guestions@onsemi.com.

ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any EDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officer

November 2013

FDD13AN06A0

N-Channel PowerTrench $^{\circledR}$ MOSFET 60 V, 50 A, 13 m Ω

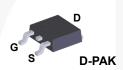

Features

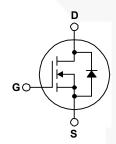

- $R_{DS(on)}$ = 11.5 m Ω (Typ.) @ V_{GS} = 10 V, I_D = 50 A
- $Q_{G(tot)}$ = 22 nC (Typ.) @ V_{GS} = 10 V
- · Low Miller Charge
- Low Q_{rr} Body Diode
- UIS Capability (Single Pulse and Repetitive Pulse)

Applications

- Consumer Appliances
- LED TV
- · Synchronous Rectification
- Battery Protection Circuit
- · Motor Drives and Uninterruptible Power Supplies

Formerly developmental type 82555

MOSFET Maximum Ratings T_C = 25°C unless otherwise noted

| Symbol | Parameter | FDD13AN06A0 | Unit |
|-----------------------------------|---|-------------|------|
| V_{DSS} | Drain to Source Voltage | 60 | V |
| V _{GS} | Gate to Source Voltage | ±20 | V |
| | Drain Current | | |
| I_D | Continuous (T _C < 80°C, V _{GS} = 10V) | 50 | Α |
| | Continuous ($T_A = 25^{\circ}$ C, $V_{GS} = 10$ V, $R_{\theta JA} = 52^{\circ}$ C/W) | 9.9 | Α |
| | Pulsed | Figure 4 | А |
| E _{AS} | Single Pulse Avalanche Energy (Note 1) | 56 | mJ |
| P _D | Power dissipation | 115 | W |
| | Derate above 25°C | 0.77 | W/°C |
| T _J , T _{STG} | Operating and Storage Temperature | -55 to 175 | °C |

Thermal Characteristics

| $R_{\theta JC}$ | Thermal Resistance Junction to Case, Max. D-PAK | 1.3 | °C/W |
|-----------------|--|-----|------|
| R_{θ} | Thermal Resistance Junction to Ambient, Max. D-PAK | 100 | °C/W |
| $R_{\theta JA}$ | Thermal Resistance Junction to Ambient, Max. D-PAK, 1in ² copper pad area | 52 | °C/W |

| Package N | Marking | and | Ordering | Information |
|-----------|---------|-----|-----------------|-------------|
|-----------|---------|-----|-----------------|-------------|

| Device Marking | Device | Package | Reel Size | Tape Width | Quantity |
|----------------|-------------|---------|-----------|------------|------------|
| FDD13AN06A0 | FDD13AN06A0 | D-PAK | 330 mm | 16 mm | 2500 units |

Electrical Characteristics $T_C = 25^{\circ}C$ unless otherwise noted

| Symbol | Parameter | Test Cor | ditions | Min | Тур | Max | Unit |

Thermal Resistance vs. Mounting Pad Area

The maximum rated junction temperature, T_{JM} , and the thermal resistance of the heat dissipating path determines the maximum allowable device power dissipation, P_{DM} , in an application. Therefore the application's ambient temperature, T_A (°C), and thermal resistance $R_{\theta JA}$ (°C/W) must be reviewed to ensure that T_{JM} is never exceeded. Equation 1 mathematically represents the relationship and serves as the basis for establishing the rating of the part.

$$P_{DM} = \frac{(T_{JM} - T_A)}{R_{\theta JA}} \tag{EQ. 1}$$

In using surface mount devices such as the TO-252 package, the environment in which it is applied will have a significant influence on the part's current and maximum power dissipation ratings. Precise determination of P_{DM} is complex and influenced by many factors:

- The number of copper layers and the thickness of the board.
- 3. The use of external heat sinks.
- 4. The use of thermal vias.
- 5. Air flow and board orientation.
- 6. For non steady state applications, the pulse width, the duty cycle and the transient thermal response of the part, the board and the environment they are in.

Fairchild provides thermal information to assist the designer's preliminary application evaluation. Figure 21 defines the $R_{\theta JA}$ for the device as a function of the top copper (component side) area. This is for a horizontally positioned FR-4 board with 1oz copper after 1000 seconds of steady state power with no air flow. This graph provides the necessary information for calculation of the steady state junction temperature or power dissipation. Pulse applications can be evaluated using the Fairchild device Spice thermal model or manually utilizing the normalized maximum transient thermal impedance curve.

Thermal resistances corresponding to other copper areas can be obtained from Figure 21 or by calculation using Equation 2 or 3. Equation 2 is used for copper area defined in inches square and equation 3 is for area in centimeters square. The area, in square inches or square centimeters is the top copper area including the gate and source pads.

$$R_{\theta JA} = 33.32 + \frac{23.84}{(0.268 + Area)}$$
 (EQ. 2)

Area in Inches Squared

$$R_{\theta JA} = 33.32 + \frac{154}{(1.73 + Area)}$$
 (EQ. 3)

Area in Centimeters Squared
