The AS6200 demo offers easy-to-use exploration of the ams digital temperature sensor. It is Bluetooth enabled to communicate with your device. By downloading the companion app from the [App Store](#) or [Google Play Store](#) it is possible to modify all settings of the sensor and observe the impact on power consumption and conversion rate. All three demos could be paired up at the same time to find the optimal settings for your needs. It even enables to record a temperature sequence to compare it with different settings of the temperature sensor demo. Finally the app does provide basic information of the product and help to understand the principals of the alert mode.

[Zoom](#)

The demo consists of an AS6200 temperature button and an CR2023 coin cell. By pulling the flap the demo is enabled and ready to be paired with the app.
