EATON

Powering Business Worldwide

We make what matters work.*

At Eaton, we believe that power is a fundamental part of just about everything people do. That's why we're dedicated to helping our customers find new ways to manage electrical, hydraulic and mechanical power more efficiently, safely and sustainably. To improve people's lives, the communities where we live and work, and the planet our future generations depend upon. Because this is what really matters. And we're here to make sure it works.

Planning safety and process optimization – CAD data at the push of a button!

- 13,200 article data and macros
- Convenient selection tool
- Version P8

Eaton is providing its customers with CAD data to offer optimum support during planning. Both electrical and mechanical design data can be called up quickly and conveniently from the Internet at any time. This reduces processing times, minimizes errors and thus reduces costs already in the engineering phase of control panels, systems and machinery.

- Models for approx. 11,000 products
- 80 different neutral and native formats

eCAD: Eaton makes product data and macros available for the EPLAN planning system and the Electric P8 version. After downloading the small selection program, EPLANSelection, the required article can be selected from the database which contains more than 10,800 products, exported and then imported into the customer's own EPLAN article database.

mCAD: Eaton provides 2D and 3D data for around 11,000 products. Over 80 different neutral and native formats guarantee compatibility with the project engineering systems of the customer. The models can either be integrated directly into the planning software from the Partcommunity Portal on the Internet or via the CADENAS Partsolution software.

www.eaton.eu/cad

Flip catalog: Get Information, Choose, Order – The Fast and Easy Way!

The product overview is used to quickly select the Eaton core range for mechanical engineering. This product overview is available online as a digital flip catalog with extensive additional functions. This makes obtaining information and ordering much easier and quicker.

How does our digital flip catalog work? The contents of the digital flip catalog are linked with the Eaton online catalog and the product pages on the internet: Click on the type designation or article number to access all the product information directly. In other words, the flip catalog is the perfect way to obtain comprehensive, up-to-date information, perfectly complementing our hard copy catalog.

Product highlights

Feeder system: Power feed system for motor-starter combinations

The feeder system forms the basis for safe and innovative energy distribution of up to 125 A. The modular solution can be simply and intuitively integrated in your machines and systems with pluggable assembly.

Out-Of-The-Box: The feeder system can be assembled with ease: Fast, simple and reliable - out of the box and directly into the control panel! All the components are assembled without the need for tools, and the snap-lock-technology enables an easy feed to the system.

Discover more on Page 3/30.

Link module PKZ — DIL

Motor-starter combinations with up to 15 kW power rating, consisting of a motor-protective circuit breaker and a contactor, can now be built with improved time-saving properties and a more compact design using the new link module PKZM0-XDM32ME.

The link module enables the electromechanical combination of motor-protective circuit breakers PKZM0, PKE12 and PKE32 with the contactors DILM17 to DILM38 and/or the soft starters DS7 in the rated current range of 16 to 32 A. The link module can be used to fit DOL starters or reversing starters.

Discover more on Page 3/35

DILMS safety contactors up to 150 A/75 kW

A safety contactor must comply with the requirement "unintended misuse".

In other words

- Reliable status monitoring of a contactor
- Reliable switching off for a controlled stop
- Interlocked auxiliary contact elements
- Mirror contacts
- Signal with low power

Discover more on Page 1/52.

DILDC contactors

The DILDC contactors of the Moeller® series for the current range 300 A to 600 A (DC) can be used in various applications. The proven hybrid technology ensures a high lifespan of the devices.

Compared with similar DC contactors, the Eaton contactors have a much higher electrical operation. The DILDC contactors will therefore become a maintenance-free and reliable component in every machine and system.

Discover more on Page 5/3.

Build it in.

DIL contactors: Powerful, efficient and flexible

The DIL contactor series covers the entire output range from mini contactor relays up to 7 A through to vacuum contactors up to 3180 A. The combination with electronic overload relays or bimetal relays supports motor starters for the most varied of applications.

The safety contactor series up to 150 A/75 kW with auxiliary contact blocks fitted to the front complies with the requirements for unintended misuse.

All devices fulfill the demands for world-wide use and are compliant to UL/CSA, CCC and shipping classifications. The motor protection systems are also ATEX certified.

The contactors are even more efficient primarily due to the eco types for 15.5 A, 38 A, 72 A and 170 A as well as the many innovations for the motor starters, such as SmartWire-DT.

DILM contactors up to 170 A

The DILM contactor series up to 170 A is characterized by its compact dimensions. Accordingly, all AC- and DC-operated devices have the same dimensions and can therefore use the same auxiliary equipment, which makes engineering easier for you.

All contactors with DC actuation from DILM17 or higher feature an electronically controlled coil unit with the following features:

- Significantly less heat dissipation due to reduced sealing power
- Small control transformers due to low pull-in power
- Direct actuation from the PLC without coupling relays up to 38 A.

DILMS safety contactors up to 150 A / 75 kW

A safety contactor must enable manipulation-proof operation. The DILMS safety contactors from Eaton comply with the following requirements:

- Reliable statusmonitoring of a contactor
- Reliable switching off for a controlled stop
- Interlocked auxiliary contact elements
- Mirror contacts
- Signal with lowpower

The front coil end enables the operator simple troubleshooting and a reliable commissioning. The yellow color of the DILMS safety contactor distinguishes it from the normal contactors.

Contactors of greater output up to 3180 A

All DILM and DILH contactors in the range from 185 A to 3180 A have electronically controlled coils. This results in the following advantages for the application:

- Flexibility in the actuation (classically directly from the PLC or via low-power actuating device)
- Considerably lower control panel temperatures due to reduced sealing power
- Broad control voltage tolerance for a greater reliability in the case of voltage fluctuations
- Integrated suppressor circuit
- In the comfort version, four wide-range actuating voltages cover the entire control voltage range from 48 V to 500 V.

The DILM contactors from 580 A and DILH from 1400 A are vacuum contactors with the following additional features:

- High electrical lifespan
- No open arc. They can therefore be fitted together more closely (switching gases do not blow out).

Connectors

For mechanical connection of contactor, relays and timing relays in combinations.
Contactor distance: 0 mm

-	-	DILE... DILET...	VO DILE 026634	50 pcs. 	UL/CSA certification not required
---	---	---------------------	--------------------------	-------------	-----------------------------------

Mechanical interlock

For contactors with the same or different magnet system.
Contactor distance: 0 mm
Mechanical lifespan: 2.5×10^6 operations.
Additional auxiliary contact modules possible.

-		DILE...	MV DILE 010113	5 pcs. 	Product standards UL File No. UL CCN CSA File No. CSA Class No. NA Certification	IEC/EN 60947-4-1; UL 508; CSA-C22.2 No. 14-05; CE marking E29184 NKCR2 012528 3211-07 UL-recognized, CSA-certified

consisting of two 4 pole paralleling links						
-		DILEEM DILEM12 DILEM	PI DILEM ²⁾ 019095	5 pcs. 		

Notes

¹⁾ Not protected against accidental contact as specified in VDE 0106 Part 100.

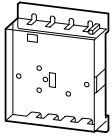

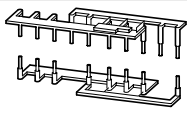

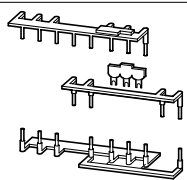

²⁾ 4. Pole can be broken off

4-pole: $I_{th} = 60$ A open

3-pole: $I_{th} = 50$ A open

AC-1 current carrying capacity of the open contactor increases by a factor of 2.5.

Protected against accidental contact in accordance to VDE 0106 part 100

	For use with	Type Article no.	Std. pack	Information relevant for export to North America

1 pc.

Contactors suitable for semi-conductor industry according to SEMI F47.
 Contactors hum-free, suitable for building services automation.
 Operating mechanism adjustable from 50 Hz to 400 Hz.

For all contactors the following applies:
 Integrated suppressor circuit
 For DILMF8-01 – DILMF32-01 the following applies:
 With mirror contact.
 Contacts according to EN 50012.

Notes

For all contactors the following applies:
660 V, 690 V or 1000 V: not directly reversing
Integrated suppressor circuit in actuating electronics.

During high-voltage tests, the suppressor circuit on the load side for DILM580 to DILH2600 contactors must be disconnected (see instruction leaflet).
A suppressor circuit on the load side is included in the basic features of devices DILM580 to DILH2600.

Control voltages
RAC240 Δ 190 V - 240 V AC
RAW250 Δ 230 V - 250 V AC, 350 V DC
RA250 Δ 110 V - 250 V AC, 350 V DC
RAC500 Δ 250 V - 500 V AC, 700 V DC

2200	DILH2200/22(RAW250) 111793	
2600	DILH2600/22(RAW250) 125945	

Notes

For all contactors the following applies:
660 V, 690 V or 1000 V: not directly reversing
Integrated suppressor circuit in actuating electronics.

During high-voltage tests, the suppressor circuit on the load side for DILM580 to DILH2600 contactors must be disconnected (see instruction leaflet).
A suppressor circuit on the load side is included in the basic features of devices DILM580 to DILH2600.

Control voltages
RA110 \triangleq 48 V - 110 V AC, 110 V DC
RAW250 \triangleq 230 V - 250 V AC, 350 V DC
RA250 \triangleq 110 V - 250 V AC, 350 V DC
RAC500 \triangleq 250 V - 500 V AC, 700 V DC

Accessories

Auxiliary contact modules
Suppressor circuits on load side
Surface mounting enclosure

→ 1/74

Notes

Classical

A1/A2 are attached to power supply as normal

Direct from the PLC

A 24 V output from the PLC can be directly connected to the connections A3/A4.

From a low-power actuating device

Low-power actuating devices such as PCB relays, actuating devices or position switches can be directly connected to A10/A11.

- ① Stopping in the event of an emergency (emergency switching off)
- ② max. Capacity 6 nF

Notes

¹⁾ DILM1000-XHI... can only be fitted to the left of DILMP.

Contacts according to EN 50012.

For DC operated conductors DILMP20 the following applies:

Integrated varistor suppressor circuit.

For DC operated contactors DILMP32 – DILMP200 the following applies:

Integrated suppressor circuit in actuating electronics.

For AC operated contactors DILMP125 – DILMP200 the following applies:

Integrated suppressor circuit in actuating electronics.

For DILMP32-01 and DILMP45-01 the following applies:

With mirror contact.

Notes

Side mounting auxiliary contacts

- ① DILM40 – DILM72
- ② DILM250 – DILH2600
- ③ DILM80 – DILM225A

Interlocked opposing contacts according to IEC/EN 60947-5-1 appendix L, inside the auxiliary contact modules (no NO early-makes and no NC late-breaks).

Auxiliary contacts can be used as mirror contacts according to IEC/EN 60947-4-1 Appendix F (not N/C late open). No mechanical interlock is possible between two contactors with auxiliary contacts.

2 auxiliary contacts DILM820-XHI11-SI are already built into the contactors DILM250 to DILH2600/22.
2 DILM1000-XHI11-SI auxiliary contacts are already installed in DILM185A and DILH225A contactors.

Notes

In the case of group compensation multi-stage capacitor banks are connected to the mains, as required. Transient currents of up to $180 \times I_e$ could flow between the capacitors.

The capacitors are pre-charged via the early-make auxiliary contacts and the fitted wire resistors, thereby reducing the inrush current. The main contacts then close after a time lag and carry the continuous current.

The contactors for capacitors are weld-resistant with inrush current peaks up to $180 \times I_e$ due to their special contacts.

DILK... cannot be combined with other auxiliary contacts.

For the switching of reactive-power compensation equipment, please see engineering notes on "power factor correction"

Notes

Use of the contactor DILM without series resistance for group compensation

When using the contactors for group compensation in a system without chokes, each capacitor must have a minimum inductance of approx. 6 µH to limit the peak inrush current. This means an air coil with 5 windings, with a coil diameter of approx. Ø 140 mm. The conductor cross-section must be designed in accordance with the rated operational current for each phase.

Main circuit:

Depending on the type of coordination required (i.e. type "1" or type "2") it must be established whether the fuse protection and the input wiring for the mains contactor and delta contactor are to be ① common or ② separate.

Control circuit:

If the combinations are to be used within the scope of IEC/EN 60 204-1, VDE 0113 Part 1, then Point 9.1.1 regarding the "supply of control circuits", must be observed.

Notes

AC-3: Normal AC induction motors: Starting, switching off while running
AC-4: Normal AC induction motors: Starting, using counter-current for braking, reversing, inching

Also suitable for motors with efficiency class IE3.
IE3-ready devices are identified by the logo on their packaging.

DILMF80 – DILMF150

DILM185A **DILM500-XMV⁵⁾**
DILM225A 208289
DILM250
DILM300A
DILM400
DILM500

For contactors with the same or different magnet systems mounted horizontally or vertically, mechanical lifespan 5 x 10⁶ operations. No auxiliary contact permitted between mechanical interlock and contactor.
Contactors DILM250 to DILM500 can be interlocked with each other in all combinations.
Contactors DILM185A and DILM225A can be interlocked with each other in all combinations.
For combinations of DILM185A or DILM225A with DILM250 to DILM500 maintain a 36 mm offset to the fixing plate (see instruction leaflet ILO3406009Z).

DILM580 **DILM820-XMV⁵⁾**
DILM650 208288
DILM750
DILM820
DILM1000

For contactors with the same or different magnet systems mounted horizontally or vertically, mechanical lifespan 5 x 10⁶ operations. No auxiliary contact permitted between mechanical interlock and contactor.
DILM820-XMV consists of interlock element and fixing plate.

Set of spare parts for mechanical interlock

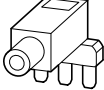

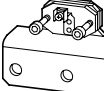

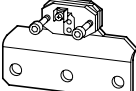

Ball for mechanical interlock, incl. contactor connector.

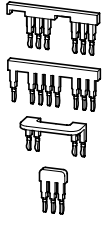

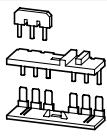

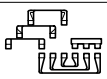

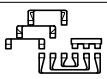

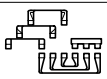

DILM80 – DILM170 **DILM150-XMVE** 1 pc. UL/CSA certification not required
107020

1

General

For safety-oriented shutdown of safety categories 3 and 4 in accordance with EN 954-1 or EN ISO 13849 performance levels d and e, now two contactors in a row must be used. Especially with larger contactors this is an expensive solution.

Usage

This is where the CMD can be used. The function of the CMD is to monitor the main contacts of a contactor against welding. For this, the control voltage of the contactor is compared with the state of the main contacts which is reliably monitored using a mirror contact (IEC EN 60947-4-1 appendix F). If the contactor coil is de-energized and the contactor does not drop out, the CMD trips the upstream circuit breaker/motor-protective circuit breaker/switch-disconnector via an undervoltage release.

Safety

The CMD is of a safety-oriented design, so that in safety-oriented applications in combination with a circuit breaker/motor-protective circuit breaker/switch-disconnector, the reliable switch off in the case of a "welded contactor" can be guaranteed. In these applications, it replaces the series connection of a second contactor. As a component, it conforms to safety category 3 according to EN 954-1 and EN ISO 13849.

Assembly

The CMD can be combined with the following Eaton components:

Contactor:

- DILM(C)7, DILM(C)9, DILM(C)12, DILM(C)15, DILM(C)17, DILM(C)25, DILM(C)32, DILM(C)40, DILM(C)50, DILM(C)65, DILM(C)72, DILM(C)80, DILM(C)95, DILM(C)115, DILM(C)150, DILM(C)170
- DILEEM and DILEM
- DILM185A, DILM225A, DILM250(-S), DILM300A(-S), DILM400(-S), DILM500(-S)
- DILM580, DILM650, DILM750, DILM820, DILM1000
- DILH1400, DILH2000

For the wiring of the CMD, the auxiliary NC must have a mirror contact function in accordance with IEC/EN 60947-4-1, and the auxiliary NO must also be interlocked opposing in accordance with IEC/EN 60947-5-1. In addition, the auxiliary NC must likewise have a mirror contact function in accordance with IEC/EN 60947-4-1 for the feedback circuit.

Motor-protective circuit breaker/ circuit breaker:

- NZM1, N1 + NZM1-XU(HIV) (L)18DC
- NZM2, N2 + NZM2/3-XU(HIV20)18DC
- NZM3, N3 + NZM2/3-XU(HIV20)18DC
- NZM4, N4 + NZM4-XU(HIV20)18DC

Auxiliary contact requirements per contactor:

	CMD	Self maintaining	Feedback circuit	Electrical interlock
Direct starter	1 M + 1 B	1 N/O	1 N/C	–
Reversing starter	1 M + 1 B	1 N/O	1 N/C	1 N/C

Notes

To obtain the article number for ordering, read under selected part number and actuating voltage from the table.

Devices with dual-voltage coils must be ordered under a single article no.

¹⁾ * = required actuating voltage from the specified range (...-...V).

²⁾ minimum order quantity 5 pcs.

³⁾ minimum order quantity 10 pcs.

RDC24 24 - 27 V DC

RDC60 48 - 60 V DC

Electronic module, incl. coil for standard model

	DILM250-S-XSP/E(...)	DILM500-S-XSP/E(...)
	Article no.	Article no.
110-120V50/60HZ	274201	274204

Notes

To obtain the article number for ordering, read under selected part number and actuating voltage from the table.
 Devices with dual-voltage coils must be ordered under a single article no.
 48 – 110 V 40 – 60 Hz/48 – 110 V DC
 RAC120 100 - 120 V 50/60 Hz

DILA (AC-15)

Component lifespan (operations)
 I_e = Rated operational current

DILA (DC)¹⁾

Component lifespan (operations)
 I_e = Rated operational current

¹⁾ Three contacts in series

DILER (AC-15)

Component lifespan (operations)
 I_e = Rated operational current

Normal switching duty

Extreme switching duty

Normal AC induction motor

Operating characteristics

Switch on: from stop

Switch off: during run

Electrical characteristics:

Switch on: up to 6 × rated motor current

Switch off: up to 1 × rated motor current

Utilization category

100 % AC-3

Typical applications

- Compressors
- Pumps
- Fan
- Hinged flaps
- Elevators (Lifts)
- Escalators
- Conveyor belts
- Bucket-elevator
- Mixers
- Agitators
- Centrifuges
- Air-conditioning systems
- General drives for manufacturing and processing machines

Normal AC induction motor

Operating characteristics

Inching, plugging, reversing

Electrical characteristics:

Switch on: up to 6 × rated motor current

Switch off: up to 6 × rated motor current

Utilization category

100 % AC-4

Typical applications

- Printing machines
- Wire-drawing machines
- Centrifuges
- Special drives on manufacturing and processing machines

1

Extreme switching duty

Normal AC induction motor

Operating characteristics

Inching, plugging, reversing

Electrical characteristics:

Switch on: up to $6 \times$ rated motor current

Switch off: up to $6 \times$ rated motor current

Utilization category

100 % AC-4

Typical applications

- Printing machines
- Wire-drawing machines
- Centrifuges
- Special drives on manufacturing and processing machines

Switching conditions for 3 pole, non-motor loads

Operating characteristics

Non inductive and slightly inductive loads

Electrical characteristics:

Switch on: $1 \times$ rated operational current

Switch off: $1 \times$ rated operational current

Utilization category

100 % AC-1

Typical applications

Electric heat

Switching conditions for 4 pole, non-motor loads

- Operating characteristics
 - Non inductive and slightly inductive loads
- Electrical characteristics:
 - Switch on: 1 x rated operational current
 - Switch off: 1 x rated operational current
- Utilization category
 - 100 % AC-1
- Typical applications
 - Electric heat

1

Short-time loading 3 pole

Determination of the max. operating frequency dependent on the rating and utilization category (recommended values) for 400 V

P_N = max. Rated motor output (kW) of the respective contactor → Page 1/8

S/h = max. Operations per hour

Greater motor protection – flexible and secure

Motor protection is one of the central tasks of the electrical equipment of machines. Inexpensive bimetal solutions through to an electronic configurable motor protection offer the correct solution for any application.

The electronic overload relays in the ZEB series provide an optimum solution for greater motor protection. They cover the current range up to 175 A and can be flexibly fitted direct to the DILM contactor or positioned anywhere in the control panel in separate mountings.

The protection for phase failure and overload, in combination with the selectable phase failure sensitivity as well as the visual overload early warning by LED devices, guarantee utmost reliability. In addition, the self-supplying electronics make it unnecessary to connect an external supply voltage.

As devices for world markets, all the motor protection devices from Eaton fulfill the respective requirements such as the classification in accordance with UL/CSA and CCC, and they are certified as motor protection systems as defined by ATEX.

Engineering

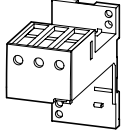

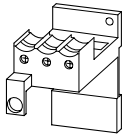

Switchgear and cable sizing corresponding to the respective starting inertia (CLASS) for ZEB

The switchgear is designed for CLASS 10 in normal and overload operation. To ensure that the switchgear (circuit-breaker and contactor) as well as the cables are not overloaded with extended tripping times, they must be over-dimensioned accordingly.

The rated operational current I_b for switchgear and cables can be calculated with the following current factor while taking the tripping class into account:

Tripping class	CLASS 5	CLASS 10	CLASS 15	CLASS 20	CLASS 25	CLASS 30	CLASS 35	CLASS 40
Current factor for rated operational current I_b	1.00	1.00	1.22	1.41	1.58	1.73	1.89	2.00

Tripping characteristics

These tripping characteristics of bimetal relays are mean values of the spread at 20 °C ambient air temperature in a cold state. Tripping time depends on response current. In the case of devices at operating temperature, the tripping time of the overload relay decreases to around 25% of the value that is read off. Specific characteristics for each individual setting range can be found in the manual → page 2/19

Motor-protective circuit breaker: Flexible solutions – simple, smart, plug-in and versatile

PKZ motor protection switch

PKZ motor-protective circuit breakers have been produced at Eaton since 1932. Since then, our ideas and developments have played a key role in the trend for protecting motors. The results are progressive concepts and marketable product innovations that time and again assume the role of international trendsetting, pioneering products, e.g. such as the motor-protective circuit breaker PKE.

Feeder system MSFS

The MSFS feeder system can be used as the basis for a safe and innovative power distribution system for currents of up to 125 A. Thanks to a plug-in mounting design, the modular solution can be easily and intuitively integrated into machines and systems. The feeder system can be used both remotely and also centrally in the power distribution, in the central power distribution or directly in the system.

Link module PKZM0-XDM32ME

The new link module represents an economical alternative to the existing link set PKZM0-XDM32, and is impressive with its more compact construction, its universal range of application and increased security.

 Phase failure sensitivity to IEC/EN 60947-4-1, VDE 0660 part 102
 Switching capacity SCCR
 65 kA (480 Y/277 V)
 22 kA (600 Y/347 V)

2)

Product standards UL 489; CSA-C22.2 no. 5-09; IEC60947-4-1; CE marking
 UL File No. E31593
 UL CCN DIVQ
 CSA File No. 165628
 CSA Class No. 1432-01
 NA Certification UL Listed, CSA certified
 Specially designed for NA Yes
 Suitable for Feeder and branch circuit as BCPD

Motor-protective circuit breakers PKZMO for starter combinations, transformer-protective circuit breaker

Notes

When using the PKM0 as short-circuit protection for motors with heavy starting duty, the rated operational current I_n when designing the switchgear must be over-dimensioned with the following factors:

- CLASS 5: 1.0
- CLASS 10: 1.0
- CLASS 15: 1.22
- CLASS 20: 1.41
- CLASS 25: 1.58
- CLASS 30: 1.73
- CLASS 35: 1.89
- CLASS 40: 2.0

Accessories

- 1 Standard auxiliary contact → 3/14
- 2 Trip-indicating auxiliary contact → 3/16
- 3 Shunt release, undervoltage release → 3/40
- Snap-on to IEC/EN 60715 top-hat rail with 7.5 or 15 mm height
- Allocation of short-circuit protective beaker and contactor in chapter 4 → 4/2

Page

An appropriate overload relay must be fitted to protect motors against overload.

Accessories

- 1 Standard auxiliary contact → 3/14
- 2 Trip-indicating auxiliary contact → 3/16
- 3 Shunt release, undervoltage release → 3/40

Notes

Information relevant for export to North America

Can be fitted to the right of:
 Motor-protective circuit breaker, transformer-protective circuit breaker,
 Motor-protective circuit breaker for start combinations
 Apart from MSC-R...
 Can be combined with:
 Trip-indicating auxiliary contact AGM, HI-E...

Product standards	UL 508; CSA-C22.2 No. 14; IEC60947-4-1; CE marking
UL File No.	E36332
UL CCN	NLRV
CSA File No.	165628
CSA Class No.	3211-05
NA Certification	UL Listed, CSA certified

Can be fitted to the motor-protective circuit breaker, transformer-protective circuit breaker, motor-protective circuit breaker for starter combinations from series no. 01. 45 mm (PKZM0 and PKZM01) or 55 mm (PKZM4) widths of the motor-protective circuit breaker remain unchanged. NHI-E...-PKZO-C not usable for MSC...-type motor-starter combinations.

Accessories

- 1 Motor-protective circuit breaker
- 2 Trip-indicating auxiliary contact
- Further accessories

Notes

Information relevant for export to North America

Can be retrofitted on the right side of motor-protective circuit breakers

Can be combined with standard auxiliary contact:
 NHI11-PKZ0
 NHI12-PKZ0
 NHI21-PKZ0
 NHI-E-...

Differential indication:
 a) General trip indication (overload)
 b) Short-circuit release

Short-circuits indicated locally by means of a red indicator that can be manually reset

Product standards	UL 508; CSA-C22.2 No. 14; IEC60947-4-1; CE marking
UL File No.	E36332
UL CCN	NLRV
CSA File No.	165628
CSA Class No.	3211-05
NA Certification	UL Listed, CSA certified

Can be fitted to front on motor-protective circuit breaker, 45 mm width of the motor-protective circuit breaker remains unchanged.

For early energization of undervoltage release, e.g. in emergency-stop circuits to EN 60204.
 VHI20-PKZ0 cannot be used in combination with PKZ0-X(R)H(-M), MSC-... and PKZM0-X...M12.

Accessories

Current limiter CL-PKZO, function element SWD, overload relay module PKE-XZMR...

3

Circuit symbol For use with

Current limiter

Motor-protective circuit breaker, non-auto-protected in order to increase switching capacity

Max. Rated operating voltage $U_p = 690$ V, rated uninterrupted current $I_u = 63$ A.

For individual and group protection.

For group protection and in combination with PKZM4, order additional BK25/3 extension terminal if required.

Mounting next to or behind the motor-protective circuit breaker.

PKZM0: 16 - 32 A, 150 kA/440 V

PKZM4: 16 - 63 A, 100 kA/400 V

PKZM4: 16 - 63 A, 10 kA/690 V

PKZM0
PKZM4
PKE
PKM0

Function elements

SmartWire-DT PKE module for motor-starter combinations

For connecting PKE motor-starter combination MSC-DEA... with PKE-XTUA-... trip blocks with a rated motor output of 15 kW/400 V to SmartWire-DT.

Motor protection, motor protection for heavy starting duty

Connecting cable between module and trip block PKE-XTUA-... included as standard.

Push in terminals

—

DILM(C)7... - DILM(C)32
MSC-DEA

SmartWire DT PKE module for motor-protective circuit breaker

For connecting the motor-protective circuit breaker with PKE-XTU(W)A-... trip blocks (motor protection) to SmartWire-DT.

—

PKE12
PKE32
PKE65

SmartWire-DT PKE module for system protection circuit breakers

For connecting the PKE circuit breaker with PKE-XTU(W)ACP-... trip blocks to SmartWire-DT.

System protection

—

PKE32
PKE65

Communication cables

For connecting the PKE to DS7-SWD

6-pole

Prefabricated with two plugs

—

DS7...SWD

Overload relay module

Contact configuration: 1 normally open (NO), 1 normally closed (NC)

PKE12, PKE32, PKE65
with XTUA trip block from
release 04 and higher

MSC motor-starter combinations: Fit and connect quickly and flexibly

The fuseless motor starters consist of a PKE motor-protective circuit breaker and a DILM contactor. The motor starters have been produced and recommended by Eaton for decades, particularly due to their large benefits for personal and operational security as well as the high reliability of the equipment.

They also facilitate the export of machines and electrical system equipment. The motor-starter combinations from Eaton enable the construction of compact, fuseless motor starters for the North American market, based on the latest guidelines. This makes it possible to design and construct the “world market control panel” with a standardized layout.

MSC-DMEA-4-M17(24VDC)
192766

The connection of the main circuit between the motor-protective circuit breaker and the contactor is established with electric/mechanical contact modules.

The MSC-DEA... DOL starters are prepared for communication via SmartWire-DT. For this, the PKE-SWD-32 communication module must be added.

Information relevant for export to North America

Motor starter actuating voltage 24 V DC	Std. pack	Motor-protective circuit breakers	Contactors	Reversing starter wiring set	Notes
Type Article no.				Mechanical link module and electric module and reversing link	

		Type	Type	Type	
MSC-R-0.25-M7(24VDC) 283190	1 pc. 	PKZM0-0.25	DILM7-01(...)	PKZM0-XRM12	
MSC-R-0.4-M7(24VDC) 283191		PKZM0-0.4	DILM7-01(...)	PKZM0-XRM12	Also suitable for motors with efficiency class IE3. IE3-ready devices are identified by the logo on their packaging.
MSC-R-0.63-M7(24VDC) 283192		PKZM0-0.63	DILM7-01(...)	PKZM0-XRM12	
MSC-R-1-M7(24VDC) 283194		PKZM0-1	DILM7-01(...)	PKZM0-XRM12	The reversing starters (complete devices) consist of a PKZM0 motor-protective circuit breaker and two DILM contactors.
MSC-R-1.6-M7(24VDC) 283195		PKZM0-1.6	DILM7-01(...)	PKZM0-XRM12	With the adapter-less top-hat rail mounting of starters up to 12 A, only the motor-protective circuit breaker on the top-hat rail requires an adapter. The contactors are provided with mechanical support via a mechanical connection element.
MSC-R-2.5-M7(24VDC) 283197		PKZM0-2.5	DILM7-01(...)	PKZM0-XRM12	
MSC-R-4-M7(24VDC) 283198		PKZM0-4	DILM7-01(...)	PKZM0-XRM12	Control wire guide with max. 6 conductors up to 2.5mm external diameter or 4 conductors up to 3.5mm external diameter.
MSC-R-6.3-M7(24VDC) 283200		PKZM0-6.3	DILM7-01(...)	PKZM0-XRM12	
MSC-R-10-M7(24VDC) 283201		PKZM0-10	DILM7-01(...)	PKZM0-XRM12	From 16 A, the motor-protective circuit breakers and contactors are mounted on the top-hat rail adapter plate.
MSC-R-10-M9(24VDC) 283202		PKZM0-10	DILM9-01(...)	PKZM0-XRM12	The connection of the main circuit between the motor-protective circuit breaker and the contactor is established using electric contact modules.
MSC-R-12-M12(24VDC) 283203		PKZM0-12	DILM12-01(...)	PKZM0-XRM12	Complete units with mechanical interlock, starters up to 12 A also feature electrical interlock.
					When using the auxiliary contact DILA-XHIT... (→ page 1/46) the plug-in electrical connector can be removed without the removal of the top mounting auxiliary contact. Cannot be combined with NHI-E-...-PKZ0-C standard auxiliary contact with spring-loaded terminal.

Also suitable for motors with efficiency class IE3. IE3-ready devices are identified by the logo on their packaging.

The reversing starters (complete devices) consist of a PKZM0 motor-protective circuit breaker and two DILM contactors. These combinations are mounted on the busbar adapters. The connection of the main circuit between the motor-protective circuit breaker and the contactor is established with electric contact modules. Complete device with mechanical interlock, starters up to 12 A also feature electrical interlock.

Fireman's switch and DC contactors: Safety and efficiency for DC applications

SOL30-SAFETY fireman's switch

When a solar installation burns, the solar modules and the DC cables are under DC voltage of up to 1000 V, with up to 8 A per line - even after isolation of the inverter. At a reasonable cost, the SOL30-SAFETY fireman's switch enables the disconnection of the voltage of the cables between the solar modules and the inverter – and therefore facilitates fire fighting without an electrical hazard.

DILDC contactors

Thanks to the proven hybrid technology of the DILDC contactors, a six-times greater lifespan is achieved in comparison with similar devices. The very short arcing times bring about less wear on the operating contacts. The DILDC contactors also enable a fast, simple and space-saving installation in the control panel.

Product features - DIL DC contactors

DC contactors are suitable for many applications:

- Solar system
- Rail transport
- Marine & Offshore
- Energy storage
- Automotive infrastructure
- DC networks

Features

- Rated operating voltage: 1000 V DC
- Utilization category: DC-1
- Ambient temperature: -40 °C to +70 °C
- Electrical lifespan 0.15 x 10⁶ operations

P-SOL, PKZ-SOL, SOL photo voltaic applications

Description

Photo voltaic systems

- ① DC String circuit-breaker PKZ-SOL
- ② DC switch-disconnector P-SOL
- ③ Ready to install SOL DC switch-disconnectors
- ④ Inverter
- ⑤ AC main switch
- ⑥ Mains

These photo voltaic systems can be independent from the power grid or can be connected to it. Photo voltaic systems that are connected to the grid feed the generated power directly into the power network. This eliminates the need for temporary storage. These systems consist of solar cells, one or more inverters, and a protective device for automatic cutoff in the event of a grid fault. Because of this, photo voltaic systems that are connected to the grid require extremely reliable and safe individual components.

Fireman's switch

- DC switch-disconnectors that isolate the cables between the solar modules and power inverters.
- They enable fire fighting without an electrical hazard.
- In addition to the **SOL30-Safety** for small installations, Eaton offers prefabricated fireman's switches housing 2, 3, 4 or 6 switch-disconnectors in a common enclosure.
- The individual lines can be separately fed into the inverter.

- This allows the use of several MPP trackers and helps optimize the inverter's performance.

Central network and system protection (NAS) in accordance with VDE-AR-N 4105 with contactors for the performance range from 30 to 100 kVA

- Undervoltage/Overvoltage monitoring
- Underfrequency/Overfrequency monitoring
- Monitoring the voltage quality (10-minute mean value)
- Vector shift monitoring connectible
- Single-fault proof
- Self-test
- Default in accordance with VDE-AR-N 4105, changes to the values are possible
- Alarm counter, alarm total time
- Sealing possibility and code protection
- Total switch-off time < 150 ms
- Low internal consumption
- Type-tested
- For all network configurations

DC string circuit breaker

- Protecting PV modules from fault currents, preventing e.g. In larger-scale systems, the recovery of intake modules on a module with short-circuit.
- After tripping and after the trip cause has been fixed, they are ready for operation.
- Open and designed for installation in customized generator terminal boxes.
- Tripping currents are adjustable within a wide range of limits.
- When installed in an enclosure, suitable for voltages of up to 900 V DC.

DC switch-disconnector

- Required, according to standard VDE 0100-712 (June 2006), between the PV module and inverter.
- Enclosed and open (after installation in enclosure) switch-disconnectors for voltages of up to 1000 V DC.
- Can be used as separate switching points, as required in VDI guideline VDI 6012, e.g. for the completely safe voltage-free switching of a faulty inverter.
- 2-pole switching – making it suitable for non-earthed systems too.
- TÜV-certified.
- **Open P-SOL switch-disconnectors** are intended for customized enclosures or inverters.
- Separate rotary handles and shaft extensions enable a flexible installation.
- An auxiliary contact block for indicating the switch state can be attached.

- A shunt release or undervoltage release is available for remote tripping.
- **SOL switch-disconnectors** in the enclosure are ready to install. Variants for 2 and 4 lines and for the common connector forms MC4 or metric screwing enable a problem-free integration in various systems.
- The enclosure in the degree of protection IP65 also enables an external assembly.
- The lockability offers security in the event of an emergency.
- A pressure equalization element prevents collection of condensation and thus malfunctions due to voltage flashovers.

General

- Optional shunt releases A-PKZ0 and undervoltage releases U-PKZ0 enable remote shutdown, e.g. for the fire department.
- Optional auxiliary contact NHI-E-PKZ0 signals the switch state.

DILDC DC contactors, DC switch-disconnectors SOL (ready to install)

Set value of the short-circuit current

As specified in the IEC 62548-1 draft for the protection of photo voltaic modules, the tripping current of the circuit-breaker must fall between 1.4 to 2 times the value of the photo voltaic module's short-circuit current.

Since only the current values of the installed overload release can be plotted on the setting scale for the circuit-breaker¹⁾, the correlation between the protective device's tripping current and the photo voltaic module's

short-circuit current must be specified for each point of the scale in a suitable form.

Setting aid for string circuit-breaker PKZ-SOL

¹⁾ Standard IEC/EN 60947-2 (Section 4.7.3) prohibits directly specifying the photo voltaic short-circuit current on the circuit-breaker's setting scale, meaning that only the current set value of the operating current can be plotted there.

Worldwide export of machines and plants

European machine and system building and worldwide exports are closely related. Even if you don't export your machines at present, you should be prepared for it in the future. Eaton provides switchgear and protective devices with all the essential approvals and certificates for machine and system building. In most countries around the world, conformity with international standards is the sole requirement for successful exports. This is because components in these locations are governed by compliance with well-known and established IEC standards. In this respect, the European CE mark is not only the "passport" for exports within Europe but also far beyond its borders.

World market equipment for machine building

The majority of the switchgears and protective devices of the Moeller® series from Eaton are global market devices. The basic versions of these devices have all the approvals and certifications. As universal devices, they can be used throughout the world.

These product lines include those for

- Pilot devices, position switches,
- Contactors and various timing and special relays,
- Motor-protective circuit-breakers and overload relays,
- Electronic components and systems.

With circuit-breakers and switch-disconnectors, Eaton offers IEC devices for use in most countries in the world and special devices with virtually the same dimensions and the same accessories for the North American market.

www.eaton.de/export

Our service, your benefit

- Reduction of resources and investments
- Reduction of assembly costs & times
- Focus on core competencies
- Reduction of packaging waste
- Storage processes, inventories & supply chains are optimized
- Using correct product combinations to reduce errors

VAS-EMEA@eaton.com

Increased efficiency means eliminating unnecessary work. This can be particularly valuable to logistics operations, where valuable time is often lost due to unnecessary operator intervention. By using our value-added services, you can streamline the logistics processes in your company so that they will be as smooth and efficient as possible.

Intralogistics: We will supply you with products exactly as you need them – even unpacked in reusable transport containers if necessary. And if you use items assembled from multiple Eaton products, we will be more than glad to deliver them to you pre-assembled.

Production: We will package your goods exactly as you need – even if that means you require them in unusual configurations. And if you need to export those goods, we will make sure to deliver them in appropriate special packaging suitable for international shipping. We can, of course, add custom labels with your own item numbers to the products we deliver as well.

Other benefits:

- Harmonized logistics concepts
- Product range optimization for your warehouse
- Special packaging concepts
- Set delivery days as agreed
- Support with all questions concerning logistics
- Customer-oriented logistics reports
- Customs clearance
- Help with compliance screening (compliance with anti-terrorism regulations)
- Order management services in multiple languages every day from 7:00 AM to 8:00 PM
- Shipment tracking
- Returns management

To find the right contact person:

At Eaton, we believe that building and maintaining strong relationships with our customers is something that deserves our undivided attention. This is how we guarantee our support for every project from the very start.

To find out whom to contact for your needs, please visit our website:

To find the right contact person anywhere in the world, visit:

At Eaton, we are solution-driven, supplying energy to a world that is ever more demanding. With over 100 years of expertise in the area of power management, we are ready for the future. Core industries all around the globe rely on Eaton and on our pioneering products, total solutions and engineering services.

Companies know they can always trust our reliable, efficient, and safe power management solutions. Together with our personalized service and support, as well as our forward-looking attitude, these solutions meet the needs of tomorrow, today. Follow the charge. Visit **eaton.eu**.
