### DESCRIPTION

The *ISSI* IS61C64AL is a very high-speed, low power, 8192-word by 8-bit static RAM. It is fabricated using *ISSI's* high-performance CMOS technology. This highly reliable process coupled with innovative circuit design techniques, yields access times as fast as 10 ns with low power consumption.

When  $\overline{CE}$  is HIGH (deselected), the device assumes a standby mode at which the power dissipation can be reduced down to 150  $\mu$ W (typical) with CMOS input levels.

Easy memory expansion is provided by using one Chip Enable input,  $\overline{CE}$ . The active LOW Write Enable ( $\overline{WE}$ ) controls both writing and reading of the memory.

The IS61C64AL is packaged in the JEDEC standard 28-pin, 300-mil SOJ, and TSOP.
