# Mobrey Magnetic Horizontal Float Switches 

For Liquid Level Alarm and Pump Control

- Ideal for industrial applications such as pump control and high or low alarm duty on tanks and pressure vessels
- Simple, rugged, and reliable. Low cost of ownership
- Direct (side or top) or chamber mounting
- Operates in most liquids
- Variety of switch mechanisms for electrical or pneumatic switching
- Selected models are safety certified to IEC 61508 with proven FMEDA, suitable for Safety Integrity Level 1 (SIL 1)
- ATEX and marine approvals

## Magnetic Horizontal Float Switches

High and low alarm application

## Measurement principle

Mobrey magnetic horizontal float switches ("float switches") are ideal for high and low liquid level alarm, and pump control duties.

The float switch is designed to open or close a circuit ("switch") as a changing liquid level within a vessel passes the level of the float (the Switch Point).

When the process liquid level is below the Switch Point, contacts B-B are made (together) and contacts A-A are open.

When the process liquid level is above the Switch Point, contacts A-A are made (together) and contacts B-B are open.

## Benefits of Mobrey magnetic float switch technology

- Over 100 years of experience - a proven design
- "Fit and Forget"
- simple, reliable, and cost effective level measurement technology
- Tough, rugged design for long life in aggressive environments
- Operates in almost any liquid at high pressures and temperatures
- Measurement is unaffected by changes in process temperature, dielectric, or the presence of vapors
- Wide range of mounting options and configurations to suit all types of liquid level application and meet site standards

## Special features of the Mobrey design

- Magnetically coupled
- No glands or linkages that could cause leaks
- No springs means reduced maintenance
- Snap action switching
- No contact hover or bounce for clean make or break
- Hermetically sealed switch mechanism is available to eliminate freezing and corrosion of contacts and all moving parts

## Selecting a float switch

## Float switches for general purpose applications (aluminum bronze wetside) - see Table 1 on page 4 for model codes

- Ideal for industrial applications such as pump control, and high or low alarm duty
- Selected models are certified to IEC61508 ${ }^{(1)}$
- Marine approvals: Lloyds Register of Shipping (LRS), Germanischer Lloyd, DNV, ABS, BV, RINA, and RMRS

## Float switches for general purpose applications (stainless steel wetside) - see Table 2 on page 5 for model codes

- Selected models are certified to IEC61508 ${ }^{(1)}$
- Marine approvals: Lloyds Register of Shipping (LRS), Germanischer Lloyd, DNV, ABS, and RMRS

## Float switches for hazardous area applications <br> - see Table 3 on page 7 for model codes

- ATEX/IECEx Zone 1 Gas Group IIC, CSA Class 1: Group CD, Technical Regulation Customs Union (EAC) Flameproof, and Lloyds Register of Shipping (LRS) approvals
- Selected models are certified to IEC61508 ${ }^{(1)}$

## Float switches for marine applications

- see Table 4 on page 9 for model codes
- Submersible (S03, S163 and S195) or hoseproof (S179 and S181)
- Hazardous Area Submersible/Hoseproof (S183, S187, and S189), designed for submersion in vented tanks and mounting from the outside of a tank
- Aluminum bronze or stainless steel enclosure and wetside
- May be submerged to 100 ft . $(30 \mathrm{~m})$ head of water (IP68)
- Hazardous area ATEX approval for Zone 1, Gas Group IIC
- Marine approvals: Lloyds Register of Shipping (LRS), Germanischer Lloyd, DNV, ABS, BV, RINA, and RMRS

## Suitable for a Safety Integrity Level 1 (SIL 1) environment

Mobrey magnetic float switches can be used in a Safety Instrumented System (SIS). Float switch orders ${ }^{(1)}$ that include the code CERT-SIL-L2049 (page 11) are supplied with a third party certificate of SIL suitability. They have been externally evaluated and certified in accordance with IEC61508 to attain Safety Integrity Level 1 (SIL 1) for a single device.

## Ordering Float Switches

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment.
See page 13 for more information on Material Selection.

## Float chambers

Float chambers are used to facilitate the external mounting of the float switch onto a tank or pressure vessel, particularly where space inside the vessel is restricted or where the control must be isolated for routine maintenance whilst the plant is in operation.

A wide range of cast or fabricated chambers is available. Exotic materials are also available. Cast chamber Process connections may be specified as top-and-bottom or side-and-side, and can be flanged, screwed or butt welded in a choice of sizes to suit most plant installations.
Please contact Rosemount Measurement for further information.

## Specifications

## Material selection

Emerson provides a variety of products with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser's sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product, materials, options and components for the particular application. Emerson Process Management is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration or materials of construction selected.

## Switch mechanism specifications

## Electrical switch mechanisms

## Type D

- For alternative make and break circuits
- Function: 2 independent single pole single throw contact sets and "Snap-Action"
- May be wired S.P.C.O. on site

## Type D6

- For switching two independent circuits.
- Function: Double pole change over (2 independent circuits) and "Snap-Action"

## Types P and P6

- As types D and D6, but with gold-plated contacts for switching low power (e.g. intrinsically safe) electrical circuits

## Type H6

- For use in corrosive area and/or low temperature applications
- As type D6, but with gold-plated contacts and all moving parts are housed in an inert gas-filled hermetically sealed enclosure

Electrical Types H6 and B6

Pneumatic Types AP and AM

## Type B6

- For use in Zone 2 Hazardous Areas
- As type H6, but coded ATEX II 3 G, EExnC IIC T6 $-76^{\circ} \mathrm{F}\left(-60^{\circ} \mathrm{C}\right)<\mathrm{Ta}<140^{\circ} \mathrm{F}\left(60^{\circ} \mathrm{C}\right)$
- For Technical Regulation Customs Union (EAC) approvals, contact an Emerson Process Management representative for the latest information

## Pneumatic switch mechanisms

## Type AP

- For switching air circuits
- Function: Change over
- Air pressure:

Max. air pressure through valve: 100 psi (7 bar).
Max. air flow through valve: 66 litres/minute at 100 psi (7 bar). Air must be clean and dry

- Nominal leakage rate of $0.2 \%$
- Connections: Brass compression couplings to suit 0.24-in. ( 6 mm ) copper or nylon pipe, coupling thread $1 / 4$-in. BSP.

## Type AM

Types $D$ and $P$

AA Makes on rising level

BB Makes on falling level

Types D6, P6, H6, and B6

A1-A2 B1-B3 Makes on rising level

A1-A3 B1-B2 Makes on falling level

## Glandless magnetic snap-action switching

A-A makes contact on rising level

B-B makes contact on falling level

## Warning

- The plating of gold contacts may be permanently damaged when used to switch circuits above the following limits:

300 V : 12 mA Resistive
$24 \mathrm{~V}: 2 \mathrm{mH} / 200 \mathrm{~mA}$ Inductive
24 V : 250 mA Resistive
$24 \mathrm{~V}: 750 \mathrm{mH} / 10 \mathrm{~mA}$ Inductive

Horizontal F68 pump control and alarm float
Note: Dimensions are in inches (mm).

## Note

- Switches fitted with the F68/+ type float may be adjusted on site to meet pump control differentials. The float is available as F68/1 or F68/4. The F68/4 has pre-drilled holes along the rod to allow the user to achieve the / 2 and /3 differentials in Table 17.
- Full details of the operating levels and differentials are in the product manual (Document Number M310).

F21/* FLOAT

## Note

- Float assembly must be fitted from inside if for use in a vessel, or complete switch and float assembly may be mounted on a suitable bracket or manhole cover.

Float rod lengths available:
F21/1 $\quad 5 \mathrm{ft} .(1524 \mathrm{~mm})$
F21/2 $\quad 10 \mathrm{ft} .(3048 \mathrm{~mm})$
F21/3 $\quad 15 \mathrm{ft} .(4570 \mathrm{~mm})$ maximum
Float roads may be cut to length on site and switches set to operate at required level in either pump control or alarm mode by following the supplied setting instructions.

## Cranked arm floats F104

Note: See Table 19 or Table $\mathbf{2 0}$ for dimensions in mm.

For intermediate
dimensions, select the next longer size in the table.

A plus $B$ must not exceed 750 mm . A and $B$ should each be equal to or greater than 75 mm , unless it is a straight arm where $A$ is $\mathbf{0 ~ m m}$ (right).

To order, specify the F104 float with these details:

1. A and $B$ (this page) or $V$ and $W$ (next page) dimensions. (For a straight arm float, state only the ' B ' dimension).
2. Liquid in contact.
3. Specific Gravity (SG) of liquid.
4. Magnetic switch head type number (e.g. S01DB/F)
5. State land or marine application.

## VERTICALLY MOUNTED F104 FLOAT

For intermediate dimensions, select the next longer size in the table.

V plus W must not exceed 750 mm . V and W should each be equal to or greater than 75 mm .

[^0]:    (1) Selected models only - see document M310/FSM on the Mobrey brand pages at www.emersonprocess.com for the latest selected models and option codes.

[^1]:    (1) The maximum process temperature is dependent on the Flange (Head), Switch mechanism, and Float options chosen.
    (2) See page 16 for cable specification.
    (3) S179 and S181 may be submersed to 100 ft . ( 30 m ) head of water with temperatures between 34 and $212^{\circ} \mathrm{F}\left(1\right.$ and $\left.100^{\circ} \mathrm{C}\right)$. Fitting and testing of customer supplied cable and cable gland is the customer's responsibility. The cable and cable gland may limit the temperature further.
    (4) The maximum process temperature for submersed S 187 is $176^{\circ} \mathrm{F} / 80^{\circ} \mathrm{C}$ (for non-approved) or $122^{\circ} \mathrm{F} / 50^{\circ} \mathrm{C}$ (for ATEX approved).
    (5) S 189 may be submersed to 100 ft . ( 30 m ) head of water with temperatures between 34 and $140^{\circ} \mathrm{F}\left(1\right.$ and $\left.60^{\circ} \mathrm{C}\right)$. Fitting and testing of customer supplied cable and cable gland is the customer's responsibility. The cable and cable gland may limit the temperature further.

[^2]:    (1) Other approvals may be available. Please contact an Emerson Process Management representative for additional information.
    (2) CSA certified products are available to special order.

[^3]:    (1) For S179 only, cable gland is supplied loose in the box. Fitting of the gland is the customer's responsibility. Types S03, S195, S163, S183, and S187 are supplied with a pre-fitted cable gland.
    (2) See Table 5 on page 10 for marine application switches supplied with a fitted cable.
    (3) Types S183, S187, and S189 only.
    (4) Other approvals may be available. Please contact an Emerson Process Management representative for additional information.

[^4]:    (1) Refer to pages 23,24 , and 25 for technical float details and length options. See "Nozzle and stud lengths" on page 23 for stud lengths.

[^5]:    (1) Refer to pages 23, 24, and 25 for technical float details and length options. See "Nozzle and stud lengths" on page 23 for stud lengths.

[^6]:    (1) These dimensions in inches ( mm ) are approximate for cold water and will vary for liquids with a different specific gravity (SG.)
