Part No.:SZC295QRLGCT-5A

Notes:

- 1. Luminous intensity is measured with a light sensor and filter combination that proximities the CIE eye-response curve.
- 2. θ 1/2 is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- 3. The dominant wavelength λ d is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
- 4. Caution in ESD:

Static Electricity and surge damages the LED. It is recommended use a wrist band or anti-electrostatic glove when handling the LED. All devices, equipment and machinery must be properly grounded.

5. Major standard testing equipment by "Instrument System" Model: CAS140B Compact Array Spectrometer and "KEITHLEY" Source Meter Model: 2400.

• CAUTIONS

1. Application Limitation:

The LED's described here are intended to be used for ordinary electronic equipment (such as office equipment, communication equipment and household application). Consult PARA's sales in advance for information on application in which exceptional quality and reliability are required, particularly when the failure or malfunction of the LED's may directly jeopardize life or health (such as airplanes, automobiles, traffic control equipment, life support system and safety devices).

2.Storage:

Do not open moisture proof bag before the products are ready to use.

Before opening the package: The LEDs should be kept at 30° C or less and 90% RH or less.

After opening the package: The LED's floor life is 1 year under 30° C or less and 60% RH or less. If unused LEDs remain, it should be stored in moisture proof packages.

If the moisture absorbent material (silica gel) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions.

Baking treatment: $60\pm5^{\circ}$ C for 24 hours..

3.Soldering

Do not apply any stress to the lead frame during soldering while the LED is at high temperature. Recommended soldering condition.

Reflow Soldering:

Pre-heat 120~150°C, 120sec. MAX., Peak temperature : 240°C Max. Soldering time: 10 sec Max. Soldering Iron: (Not recommended)

Temperature 300°C Max., Soldering time : 3 sec. Max.(one time only), power dissipation of iron : 20W Max. use SN60 solder of solder with silver content and don't to touch LED lens when soldering. Wave soldering:

Pre-heat 100°C Max, Pre-heat time 60 sec. Max, Solder wave 260°C Max, Soldering time 5 sec. Max. preformed consecutively cooling process is required between 1st and 2nd soldering processes.

Part No.:SZC295QRLGCT-5A

REV: A / 1

4. Lead-Free Soldering

For Reflow Soldering:

- 1 $\$ Pre-Heat Temp:150-180 $^{\circ}$ C,120sec.Max.
- 2 Soldering Temp: Temperature Of Soldering Pot Over 230°C,40sec.Max.
- 3 ` Peak Temperature:260 $^\circ\!\mathrm{C}\,$ ' 5sec.
- 4 Reflow Repetition:3 Times Max.
- 5 × Suggest Solder Paste Formula 93.3 Sn/3.1 Ag/3.1 Bi /0.5 Cu

For Soldering Iron (Not Recommended):

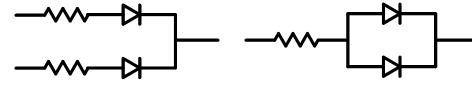

- $1 \cdot$ Iron Tip Temp:350°C Max.
- 2 Soldering Iron:30w Max.
- 3 Soldering Time:3 Sec. Max. One Time.

For Dip Soldering:

- $2 \cdot Bath Temp:265^{\circ}C Max.$
- 3 Dip Time:5 Sec. Max.
- 5. Drive Method

Circuit model A

Circuit model B

(A)Recommended circuit.

(B)The difference of brightness between LED's could be found due to the Vf-If characteristics of LED.
