

1.8V, Resistor-Programmable TEMPERATURE SWITCH and ANALOG OUT TEMPERATURE SENSOR in SC70

Check for Samples: [TMP300B-Q1](#)

FEATURES

- **ACCURACY:** $\pm 1^{\circ}\text{C}$ (typical at $+25^{\circ}\text{C}$)
- **PROGRAMMABLE TRIP POINT**
- **PROGRAMMABLE HYSTERESIS:** $5^{\circ}\text{C}/10^{\circ}\text{C}$
- **OPEN-DRAIN OUTPUTS**
- **LOW-POWER:** $110\mu\text{A}$ (max)
- **WIDE VOLTAGE RANGE:** $+1.8\text{V}$ to $+18\text{V}$
- **OPERATION:** -40°C to $+150^{\circ}\text{C}$
- **ANALOG OUT:** $10\text{mV}/^{\circ}\text{C}$
- **SC70-6 PACKAGE**

APPLICATIONS

- **QUALIFIED FOR** for **AUTOMOTIVE APPLICATIONS**
- **POWER-SUPPLY SYSTEMS**
- **DC-DC MODULES**
- **THERMAL MONITORING**
- **ELECTRONIC PROTECTION SYSTEMS**

DESCRIPTION

The TMP300B-Q1 is a low-power, resistor-programmable, digital output temperature switch. It allows a threshold point to be set by adding an external resistor. Two levels of hysteresis are available. The TMP300B-Q1 has a V_{TEMP} analog output that can be used as a testing point or in temperature-compensation loops.

With a supply voltage as low as 1.8V and low current consumption, the TMP300B-Q1 is ideal for power-sensitive systems.

Available in two micropackages that have proven thermal characteristics, this part gives a complete and simple solution for users who need simple and reliable thermal management.

NOTE: (1) Thinfilm resistor with approximately 10% accuracy; however, this accuracy error is trimmed out at the factory.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

All trademarks are the property of their respective owners.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

ORDERING INFORMATION⁽¹⁾

ORDERABLE P/N	T _A	PACKAGE	TOP SIDE SYMBOL
TMP300BQDCKRQ1 or TMP300B-Q1	-40°C to 125°C	SC70 - DCK Reel of 3000	SBG

(1) For the most current package and ordering information see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

		VALUE	UNIT
Supply Voltage	V+	+18	V
Signal Input Terminals, Voltage ⁽²⁾		-0.5 to (V+) + 0.5	V
Signal Input Terminals, Current ⁽²⁾		±10	mA
Output Short-Circuit ⁽³⁾	I _{sc}	Continuous	
Open-Drain Output		(V+) + 0.5	V
Operating Temperature	T _A	-40 to +150	°C
Storage Temperature	T _A	-55 to +150	°C
Junction Temperature	T _J	+150	°C
ESD Rating	Human Body Model (HBM)	4000	V
	Charged Device Model (CDM)	1000	V
	Machine Model (MM)	200	V

- (1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not supported.
- (2) Input terminals are diode-clamped to the power-supply rails. Input signals that can swing more than 0.5V beyond the supply rails should be current limited to 10mA or less.
- (3) Short-circuit to ground.

ELECTRICAL CHARACTERISTICS

At $V_S = 3.3V$ and $T_A = -40^\circ C$ to $+125^\circ C$, unless otherwise noted.

PARAMETER	TEST CONDITIONS	TMP300B-Q1			UNIT	
		MIN	TYP	MAX		
TEMPERATURE MEASUREMENT						
Measurement Range	$V_S = 2.35V$ to $18V$	-40		+125	$^\circ C$	
	$V_S = 1.8V$ to $2.35V$	-40		$100 \times (V_S - 0.95)$	$^\circ C$	
TRIP POINT						
Total Accuracy	$T_A = -40^\circ C$ to $+125^\circ C$		± 2	± 6	$^\circ C$	
R_{SET} Equation	T_C is in $^\circ C$	$R_{SET} = 10 (50 + T_C)/3$			$k\Omega$	
HYSTERESIS SET INPUT						
LOW Threshold ⁽¹⁾				0.4	V	
HIGH Threshold ⁽¹⁾		$V_S - 0.4$			V	
Threshold Hysteresis	$HYST_{SET} = GND$		5		$^\circ C$	
	$HYST_{SET} = V_S$		10		$^\circ C$	
DIGITAL OUTPUT						
Logic Family			CMOS			
Open-Drain Leakage Current ⁽¹⁾	$OUT = V_S$			10	μA	
Logic Levels

APPLICATIONS INFORMATION

The TMP300B-Q1 is a thermal sensor designed for over-temperature protection circuits in electronic systems. The TMP300B-Q1 uses a set resistor to program the trip temperature of the digital output. An additional high-impedance (210kΩ) analog voltage output provides the temperature reading.

CALCULATING R_{SET}

The set resistor (R_{SET}) provides a threshold voltage for the comparator input. The TMP300B-Q1 trips when the V_{TEMP} pin exceeds the T_{SET} voltage. The value of the set resistor is determined by the analog output function and the 3μA internal bias current.

To set the TMP300B-Q1 to trip at a preset value, calculate the R_{SET} resistor value according to [Equation 1](#) or [Equation 2](#):

$$R_{SET} = \frac{(T_{SET} \times 0.01 + 0.5)}{3e^{-6}} \tag{1}$$

Where T_{SET} is in °C; or

$$R_{SET} \text{ in } k\Omega = \frac{10(50 + T_{SET})}{3} \tag{2}$$

Where T_{SET} is in °C.

USING V_{TEMP} TO TRIP THE DIGITAL OUTPUT

The analog voltage output can also serve as a voltage input that forces a trip of the digital output to simulate a thermal event. This simulation facilitates easy system design and test of thermal safety circuits, as shown in [Figure 8](#).

Figure 8. Applying Voltage to Trip Digital Output

HYSTERESIS

The hysteresis pin has two settings. Grounding HYST_{SET} results in 5°C of hysteresis. Connecting it to V_S results in 10°C of hysteresis. Hysteresis error variation over temperature is shown in Figure 12 and Figure 13.

Figure 12. 5°C Hysteresis Error vs Temperature

Bypass capacitors should be used on the supplies as well as on the R_{SET} and analog out (V_{TEMP}) pins when in noisy environments, as shown in Figure 14. These capacitors reduce premature triggering of the comparator.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TMP300BQDCKRQ1	ACTIVE	SC70	DCK	6	3000	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 125	SBG	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

PLASTIC SMALL OUTLINE

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
 - Publication IPC-7351 is recommended for alternate designs.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.
