

Intelligent Power Module (IPM) 650 V, 20 A

NFAM2065L4BT

ON Semiconductor®

www.onsemi.com

General Description

The NFAM2065L4BT is a fully-integrated inverter power module consisting of an independent High side gate driver, LVIC, six IGBT's and a temperature sensor (VTS or Thermistor(T)), suitable for driving permanent magnet synchronous (PMSM) motors, brushless DC (BLDC) motors and AC asynchronous motors. The IGBT's are configured in a three-phase bridge with separate emitter connections for the lower legs for maximum flexibility in the choice of control algorithm.

The power stage has under-voltage lockout protection (UVP). Internal boost diodes are provided for high side gate boost drive.

Features

- Three-phase 650 V, 20 A IGBT Module with Independent Drivers
- Active Logic Interface
- Built-in Under-voltage Protection (UVP)
- Integrated Bootstrap Diodes and Resistors
- Separate Low-side IGBT Emitter Connections for Individual Current Sensing of Each Phase
- Temperature Sensor (VTS or Thermistor (T))
- UL1557 Certified (File No.E339285)
- This is a Pb-Free Device

Typical Application

- Industrial Drives
- Industrial Pumps
- Industrial Fans
- Industrial Automation

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

- Performance guaranteed over the indicated operating temperature range by design and/or characterization tested at T_J = T_A = 25°C. Low duty cycle pulse techniques are used during testing to maintain the junction temperature as close to ambient as possible.
- The fault-out pulse width tFOD depends on the capacitance value of CFOD according to the following approximate equation:
tFOD = 0.1 × 10⁶ × CFOD (s).
- Values based on design and/or characterization.
