Description

The TL431AIDBVR are programmable shunt voltage references with guaranteed temperature stability over the entire operating temperature range. The device temperature range is extended for the automotive version from -40 °C up to +125 °C. The output voltage can be set to any value between 2.5 and 36 V with two external resistors. The TL431AIDBVR operate with a wide current range from 1 to 100 mA with a typical dynamic impedance of 0.22 Ω.
