

Size 2 Vibration Protection Kit (VPK)

The vibration protection kit (VPK) consists of the vibration protection plate, four special screws, and two small rubber parts that cushion the [GA1000](#) Wi-Fi add-on, when installed (they come attached to the plate and are not visible on the above picture).

The plate is installed as shown on the [exploded view](#) of the TPS:

- Four M2.5 screws securing the [TPP](#) are removed and four special screws (shown above) are instead used to attach the TPP onto the bottom cover;
- The vibration protection plate goes over [Tibbits](#) (installed on the TPP) and rests on these special screws;
- Four M2.5 screws that originally held the TPP in place are used to secure the vibration protection plate onto the special screws.
