## RP12-AR

12 Watt

1" x 1"

Single and Dual Output

IEC/EN60950-1 certified  
EN50155 certified  
EN55032 compliant

### Description

The RP12-AR series DC/DC converters are designed for railway rolling stock applications with an extra wide continuous input voltage range of 36-160VDC (185VDC for 1s), making them suitable for 48V, 72V, 96V and 110VDC railway systems, but they are also suitable for non-railway high voltage battery applications. They have a built-in class A filter network and offer single or dual outputs from 3.3V up to +/-24V. The high efficiency permits an ambient temperature range from -40°C to +85°C without derating, forced cooling or the need for heatsinks. The RP12-AR series feature UVLO, OVP, SCP and OLP. This makes them ideal for many harsh railway and industrial applications such as powering IoT sensors, battery management systems or electric fork-lift trucks. The RP12-AR is available in an industry standard 1" x 1" package and comes with a 3 year warranty.

### Selection Guide

RP12-11024DAR	36-160	±24	±250	90	±100

**Notes:**

Note1: Efficiency is tested at nominal input and full load at +25°C ambient  
Note2: Max. Cap Load is tested at nominal input and full resistive load

### Model Numbering

**Notes:**

Note3: add suffix "P" for positive logic (1=ON, 0=OFF)  
add suffix "N" instead for negative logic (0=ON, 1=OFF)  
or suffix /XC for omitted CTRL pin (refer to dimension drawing)

**Ordering Examples:**

RP12-11005SAR/P	36-160Vin	5Vout	single output	positive logic
RP12-11012DAR/N	36-160Vin	±12Vout	dual output	negative logic
RP12-11024SAR/XC	36-160Vin	24Vout	single output	no CTRL pin

## OUTPUT VOLTAGE TRIMMING

### Output Voltage Trimming

It allows the user to increase or decrease the output voltage of the module. This is accomplished by connecting an external resistor between the Trim pin and either the +Vout or -Vout pins. With an external resistor between the Trim and -Vout pin, the output voltage increases. With an external resistor between the Trim and +Vout pin, the output voltage decreases. The values for trim resistors shown in trim tables below are according to standard E96 values; therefore, the specified voltage may slightly vary.

$V_{out\_nom}$  = nominal output voltage [VDC]  
 $V_{out\_set}$  = trimmed output voltage [VDC]  
 $V_{ref}$  = reference voltage [VDC]  
 $R_{up}$  = trim up resistor [ $\Omega$ ]  
 $R_{down}$  = trim down resistor [ $\Omega$ ]  
 $R_1$  &  $R_2$  = internal resistors [ $\Omega$ ]  
 $k_u$  = trim up factor [ ]

$V_{out\_nom}$	$R_1$	$R_2$	$k_u$	$V_{ref}$
3.3VDC	5k1 $\Omega$	2k $\Omega$	0.8	2.5VDC
5VDC	5k1 $\Omega$	2k $\Omega$	2.5	
12VDC	10k $\Omega$	5k1 $\Omega$	9.5	
15VDC	10k $\Omega$	5k1 $\Omega$	12.5	
24VDC	56k $\Omega$	13k $\Omega$	21.5	

### Calculation:

$$R_{up} = \left[ \frac{R_1 \times V_{ref}}{V_{out\_set} - V_{ref} - k_u} \right] - R_2$$

$$R_{down} = \left[ \frac{(V_{out\_set} - V_{ref}) \times R_1}{V_{out\_nom} - V_{out\_set}} \right] - R_2$$

### Practical Example RP12-11012SAR/P +10% / -10%:

$$R_{up} = \left[ \frac{10k \times 2.5}{13.2 - 2.5 - 9.5} \right] - 5k1 = 15k7\Omega$$

$R_{up}$  according to E96  $\approx$  **15k8 $\Omega$**

$$R_{down} = \left[ \frac{(10.8 - 2.5) \times 10k}{12 - 10.8} \right] - 5k1 = 64k1\Omega$$

$R_{down}$  according to E96  $\approx$  **63k4 $\Omega$**

### Thermal Calculation:

$$P_{diss} = P_{out\ set} \times \left[ \frac{1 - \eta}{\eta} \right]$$

$$T_{over} = R_{th} \times P_{diss}$$

$$T_{amb} = T_{case\ max.} - T_{over}$$

T<sub>case max.</sub> = max. case temperature [°C]

T<sub>over</sub> = temperature losses [°C]

T<sub>amb</sub> = ambient temperature [°C]

P<sub>out nom.</sub> = nom. output power [W]

P<sub>out set</sub> = output power set [W]

η = efficiency (see graph) [%]

P<sub>diss</sub> = internal losses [W]

R<sub>th</sub> = thermal impedance [K/W]

### Practical Example:

Take the RP12-11024SAR with 110V Input Voltage, 100% load, natural convection 0.1m/s, in vertical direction.<sup>(6)</sup>  
What is the maximum ambient operating temperature?

Thermal Impedance		
airflow [m/s]	R <sub>th</sub> w/o PCB [K/W]	R <sub>th</sub> w PCB [K/W]
0.1	17.8	12.5
2	6.3	4.4

T<sub>case max</sub> = 105°C  
P<sub>out set</sub> = 100%  
R<sub>th</sub> = 12.5K/W (vertical)

$$P_{diss} = 12W \times \left[ \frac{1 - 0.9}{0.9} \right] = 1.33W$$

$$T_{over} = 12.5 \times 1.33 = +16.7°C$$

$$T_{amb} = 105 - 16.7 = +88.3°C$$
