

General Description

The MAX14746 evaluation kit (EV kit) is a fully assembled and tested circuit for evaluating the MAX14746/MAX14747 charger detectors with a linear battery charger and a smart power selector.

Refer to the MAX14746 IC data sheet for detailed information regarding the operation and features of the devices.

The EV kit comes standard with the MAX14746 installed, but can also be used to evaluate the MAX14747 by replacing the MAX14746 (U1) with the MAX14747. Request a free sample of the MAX14747 when ordering the EV kit.

Features

- RoHS Compliant
- Proven PCB Layout
- Full Assembled and Tested
- I²C Serial Interface

Digital Inputs and Outputs

The bias for the logic inputs and the open-drain indicators can be provided from the VMC pin of J4 connector or from the pins 6 and 12 of J5. Install jumper JU11 to use VMC for the VIO supply.

The UOK1, UOK2, INT, CTYP open-drain outputs use VIO supply for their respective pullup voltages. Jumpers JU1–JU4 connect the indicator LEDs D1–D4 to these open-drain flags. LED pin is another open-drain output, the status of which is reflected by indicator D5 when JU16 is installed.

UOK2/EXT pin is preconfigured by factory as either UOK2 or EXT. EXT is a push-pull output used to control the external pMOS load switch Q2. When charger is not present, EXT is high and Q2 connects SYS to BAT. Connect JU15 accordingly based on which function UOK2/EXT is preconfigured to.

IDEF and FSUS are digital inputs set by JU5 and JU6. IDEF determines if the current limit is fixed at 100mA or controlled by I²C settings (IBusLim, ILimSet, IBusDetSw bits); FSUS, if pulled high, forces the input current limit to 0A

USB Interface

The MAX14746 provides an integrated USB2.0 full-speed interface (12Mbps). This interface is accessed through the Micro-USB type-B connector, J1 and type-A connector J3. VBUS of J1 is also the power source for the U1.

I/O Interface Connector

The EV kit allows accessing the digital I/O of the MAX14746 individually through three different interface connectors, J2, J4, and J5. Please refer to [Table 2](#) thru [Table 4](#) for the connectors pin description.
