

## Adjustable shunt voltage reference

Datasheet - production data

### **Features**

- Adjustable output voltage: 2.5 to 24 V
- Precision selection at 25 °C: ± 2%, ± 1% and ± 0.5%
- Sink current capability: 1 to 100 mA

- Industrial temperature range: 40 to + 105
   °C
- Performance compatible with industrystandard TL431

### **Applications**

- Computers
- Instrumentation
- Battery chargers
- Switch mode power supplies
- Battery-operated equipment

## **Description**

The TS2431 is an adjustable shunt voltage reference with guaranteed temperature stability over the entire temperature range of operations from - 40 to + 105 °C. The output voltage may be set to any value between 2.5 and 24 V with an external resistor bridge. Available in an SOT23-3L surface mount package, the device can be implemented for those applications where spacesaving is of the utmost importance.

Table 1: Device summary

| Order code | Temperature range | Package  | Packing       | Precision | Marking |
|------------|-------------------|----------|---------------|-----------|---------|
| TS2431ILT  |                   |          |               | 2%        | L285    |
| TS2431AILT | -40 to + 105 °C   | SOT23-3L | Tape and reel | 1%        | L286    |
| TS2431BILT |                   |          |               | 0.5%      | L287    |

## 1 Absolute maximum ratings and operating conditions

Table 2: Absolute maximum ratings

| Symbol           | Parameter                                 | Value        | Unit |
|------------------|---|--------------|------|
| V <sub>ka</sub>  | Cathode to anode voltage                  | 25           | V    |
| lκ               | Reverse breakdown current                 | -100 to +150 | mA   |
| I <sub>REF</sub> | Reference input current range             | 0.05 to +10  | mA   |
| Pd               | Power dissipation <sup>(1)</sup> SOT23-3L | 360          | mW   |
| T <sub>std</sub> | Storage temperature                       | -65 to +150  | °C   |
| ECD              | Human body model (HBM) <sup>(2)</sup>     | 2            | kV   |
| ESD              | Machine model (MM) <sup>(3)</sup>         | 200          | V    |
| TLEAD            | Lead temperature (soldering, 10 s)        | 260          | °C   |

#### Notes:

 $^{(1)}$ Pd has been calculated with  $T_{amb}$  = 25 °C,  $T_{junction}$  = 150 °C,  $R_{thjc}$  = 110 °C/W and  $R_{thja}$  = 340 °C/W for the SOT23-3 package.

 $^{(2)}$ Human body model: a 100 pF capacitor is charged to the specified voltage, then discharged through a 1.5 kΩ resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins float.

 $^{(3)}$ Machine model: a 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5  $\Omega$ ). This is applied for all couples of connected pin combinations while the other pins float.

**Table 3: Operating conditions** 

| Symbol | Parameter                                | Value                  | Unit |
|--------|--|------------------------|------|
| VKA    | Cathode to anode voltage                 | V <sub>REF</sub> to 24 | V    |
| lκ     | Cathode operating current <sup>(1)</sup> | 1 to 100               | mA   |
| Toper  | Operating free air temperature range     | - 40 to + 105          | °C   |

#### Notes:

<sup>(1)</sup>Maximum power dissipation must be strictly observed to avoid damaging the component.

#### Notes:

<sup>&</sup>lt;sup>(1)</sup>Limits are 100 % production tested at 25 °C. Overtemperature limits are guaranteed through correlation and by design.

 $<sup>^{(2)}</sup>$  $|\Delta V_{REF}|$  is defined as the difference between the maximum and minimum values of  $V_{REF}$  obtained over the full temperature range.

<sup>(3)</sup> Refer to Figure 4: "Test circuit for Vka = Vref".
