

Description

This Isolated Ground series provide negative / positive ground reference compatibility, allowing connection of negative ground equipment to positive or floating ground battery system or vice versa. They offer protection level for themselves and to the connected loads. They also offer protection against transient voltages spikes typically encountered on electric fork lifts. Being switch mode, they have high efficiency (>80%), produces little heat and are of small size for the power they deliver.

Features

- Negative or positive ground reference
- High efficiency 88%
- Low profile , high power density
- Protection against transient voltages
- EMC INTERFERENCE IMMUNITY
- 22 - 30VDC input voltage
- Overload and short circuit protection
- Over current protection
- LED power on indicator
