

INTRODUCTION

To complement its range of countersinks, Dormer has introduced three new items which incorporate flats on the shank to provide a more positive drive when used in hand held applications. Flatted shanks prevent the possibility of tools slipping in the chuck and therefore improve the performance of the tool and produce a better quality countersunk hole and surface finish.

MATERIAL

Manufactured from premium quality High Speed Steel (HSS) or High Speed Cobalt (HSS-E):

- Increased **hardness and toughness**
- Improved **cutting edge strength**
- Better **tool life**

SURFACE TREATMENT

Bright Finish (G106 and G107):

Universally suitable for many materials

- Also works well in soft ductile materials which have a tendency to stick to the cutting edges

TiAlN Coated (G506):

Suitable for hard and abrasive materials

- Ability to withstand high operating temperatures for increased tool life
- Low friction prevents material built-up-edge, improving surface finish

SHANK STYLES

TRI-FLAT SHANK

- Ground flats for positive location in 3-jaw chucks
- Available in bright finish for softer materials and TiAlN coated for harder, abrasive materials
- Both styles also available as a 6 pc set containing following diameters: 6.3, 8.3, 10.4, 12.4, 16.5, 20.5 mm

HEX-SHANK

- Hexagon shank fits directly into cordless drill driver attachments for quick change
- Also compatible with hand held drivers for quick de-burring and chamfering by hand

G107 • Countersink with hexagonal shank - 90°
