# **MP900 Series Kool-Pak<sup>®</sup> Power Film Resistors**

Page 1 of 2

## Low Cost Heat Sink Mountable Design with Non-Inductive Performance featuring an Exposed Ceramic Heat Dissipating Mounting Surface

Use your thermal design experience with power semiconductors in the TO-126 and TO-220 style power packages. This experience will help you get the most out of this unique family of power resistors. The thermal design issues are the same where the power handling capability is based on the case temperature which is maintained in your design.

## Model MP 915

### TO-126 Style Power Package

- 15 Watts at +25°C Case Temperature derated to zero at +150°C
- Exposed Ceramic Heat Dissipating Mounting Surface
- Resistance Range of 0.020 ohm to 1K
- Non-inductive Design

## Models MP 916, MP 925 and MP 930 TO-220 Style Power Package

- Up to 30 Watts at +25°C Case Temperature derated to zero at +150°C
- Exposed Ceramic Heat Dissipating Mounting Surface
- Resistance Range of 0.010 ohm to 100K
- Non-inductive Design

New Power Resistor with Exposed Ceramic Heat Dissipating Mounting Surface

## Patented Construction of the MP900 Series:

The MP900 Series Kool-Pak<sup>®</sup> Power Film Resistors are constructed with Caddock's Micronox<sup>®</sup> Resistance Film fired onto a flat ceramic substrate. The terminal attachment and resistance element geometry are configured to provide outstanding non-inductive performance. The ceramic substrate is positioned in the molded package such that the resistor element and terminal attachment areas on the substrate are encapsulated in the molded body with the other side of the ceramic being exposed flush with the back mounting surface of the device. This construction is covered by one or more issued patents, also patents pending.

Custom resistance values can be manufactured for high quantity applications. Please contact Caddock Applications Engineering. Custom resistance values for low quantity applications should use Caddock MP 800 Series Power Film Resistors.

#### Specifications:

**Resistance Tolerance:**  $\pm 1\%$  for  $0.050\Omega$  up to  $100k\Omega$ ,  $\pm 5\%$  for  $0.010\Omega$  up to  $0.049\Omega$  (5% and 20% are available for most resistance values).

**Insulation Resistance:** 10,000 Megohms, min. The resistor is electrically isolated from the mounting surface.

**Terminal Strength:** Mil-Std-202, Method 211, Cond. A (Pull Test) 5 lbs.,  $\Delta R \pm (0.2 \text{ percent} + 0.0005 \text{ ohm}) \text{ max.}$ 

**Thermal Shock:** Mil-Std-202, Method 107, Cond. F,  $\Delta R \pm (0.5 \text{ percent} + 0.0005 \text{ ohm}) \text{ max.}$ 

**Momentary Overload:** 1.5 times rated power with applied voltage not to exceed 1.5 times maximum continuous operating voltage for 5 seconds,  $\Delta R \pm (0.5 \text{ percent} + 0.0005 \text{ ohm})$  max.

**Moisture Resistance:** Mil-Std-202, Method 106,  $\Delta R \pm (0.5 \text{ percent} + 0.0005 \text{ ohm}) \text{ max}.$ 

**Load Life:** 2,000 hours at rated power,  $\Delta R$ E(1.0 percent + 0.0005 ohm). Power rating dependent upon case temperature. See derating curve.

Shock: 100G, Mil-Std-202, Method 213,

Cond. I,  $\Delta R \pm (0.4 \text{ percent} + 0.0005 \text{ ohm})$  max. Vibration, High Frequency: Mil-Std-202, Method 204, Cond. D,  $\Delta R \pm (0.4 \text{ percent} + 0.0005 \text{ ohm})$  max.

**DWV:** The dielectric strength rating of 1500  $V_{RMS}AC$  is based upon connections made between terminals shorted and either the metal surface the part is mounted to or a metal clip in contact with the top surface of the part.

Measurement Note: For these specifications, resistance measurement shall be made at a point 0.2 inch (5.08 mm) from the resistor body.
