

TANCAP

CAPACITOR MANUFACTURER

TANCAP TECHNOLOGY CO., LTD.

TB SERIES

FEATURES

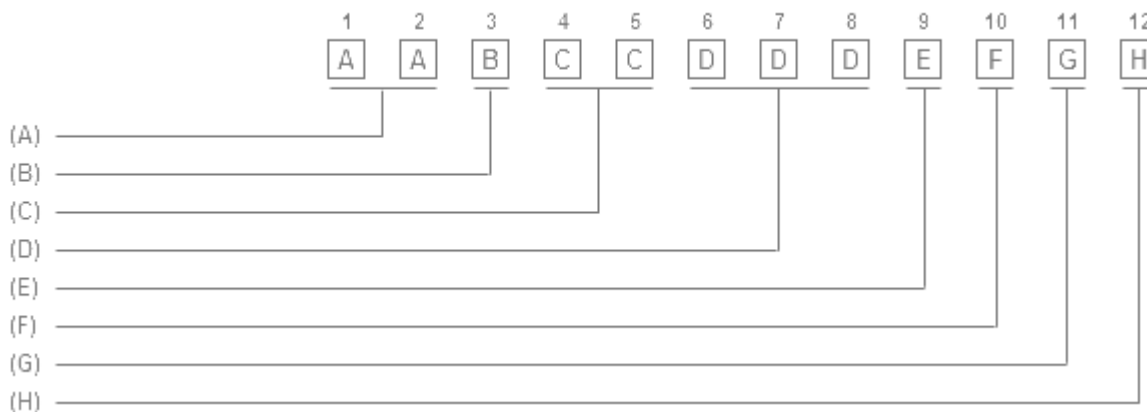

- Capacitance : 0.1uF to 330uF
- Current Test on Each Size
- Capacitance Tolerance: $\pm 5\%$ (K), $\pm 10\%$ (K), $\pm 20\%$ (M)
- Voltage : 4V DC to 50V DC

APPLICATION GUIDE

1.THE METHOD OF MOUNTING

1.1.Recommend the method of mounting:

- The capacitor directly insets PCB when it is used.
- The body and the lead are steadied in the application of the vibration and shock tests, the distance between the body and the mounting point shall be $6 \pm 1\text{mm}$.

2.NOTE IN USE

- For circuits with low resistance circuit, make the use voltage be 1/3 or under of the rated voltage; in general circuit, make the use voltage be 2/3 or under of the rated voltage.
- In case of circuits with large instantaneous rush current or rapid charging/discharging circuits, connect the protection resistor of $3\Omega/V$ or more in series to the capacitor to limit the current to 300mA or less. When the protection resistor can not be inserted, lower the use voltage to 1/3 or under of the rated voltage.
- Use the capacitors within the permissible ripple voltage specified independently. Use in the range that the sum of the DC voltage value and the peak value of ripple voltage does not exceed the rated voltage. Design not to apply over voltage made by fluctuation of superimposed DC voltage or reverse voltage to the capacitors.
- Use the capacitors within the specified use temperature range. In case use temperature exceeds +85 $^{\circ}\text{C}$, apply the reduced voltage shown in the below figure as the rated voltage.
- Environmental conditions do not use the equipment fit with the capacitor in the below environment.
 - Environment where capacitors are directly splashed with water, salt water and oil.

- Environment where capacitors are directly exposed to sunlight.
- Environment in high temperature and humidity causing dewing on capacitor surface.
- Environment where capacitors touch various active gases.
- Acid and alkaline atmosphere.
- Environment with high frequency induction.
- Environment with excessive vibration and shock.

3.STORAGE

3.1.Storage condition:

- Environmental temperature: $-10^{\circ}\text{C} \sim +40^{\circ}\text{C}$
- Relative humidity: no more than 70%

4.OTHER INFORMATION

4.1.Orders for capacitors covered by this specification shall contain, in clear or in coded form, the following minimum information:

- Rated capacitance.
- Tolerance on rated capacitance.
- Rated d.c. voltage.
