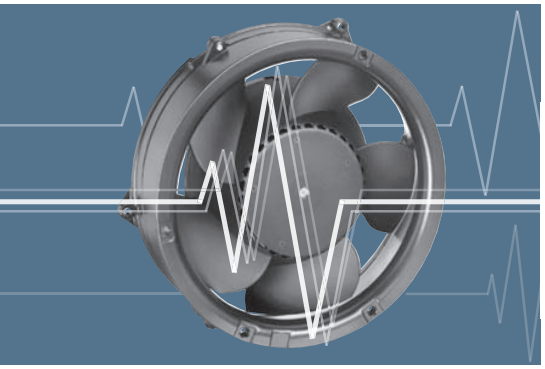
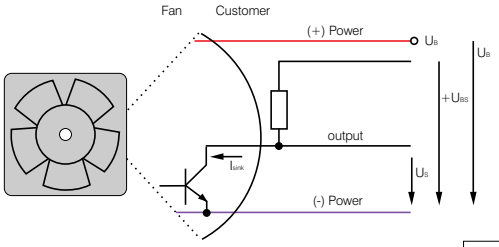
Speed signal /2



- Speed-proportional rectangular pulse for external speed monitoring of fan motor.
- 2, 3 or 6 pulses per revolution.
- Open collector signal output.
- Extremely wide operating voltage range.
- Easy adaptation to user interface.
- Connection via separate lead.
- The sensor signal also serves as a major comparison variable for setting and maintaining the setpoint speed for interactive or controlled cooling with one or several interconnected fans.

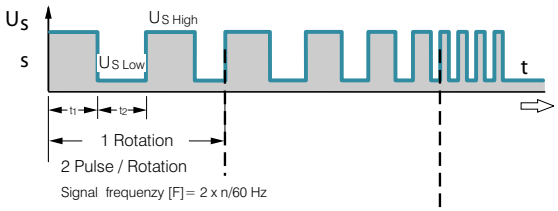
Electrical connection



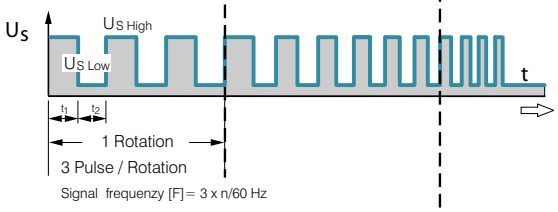
All voltages measured to ground.
External load resistor R_a / U_S / U_{BS} required.

$$R_a = \frac{U_{BS} - U_{SLOW}}{I_{SINK}}$$

Signal output voltage
Standard signal for all models (exceptions see below)



only for 4100 NH7 and NH8



All TD fans. Ex.: 6400 TD
