

TLC5920 16x8 BIT LED DRIVER/CONTROLLER

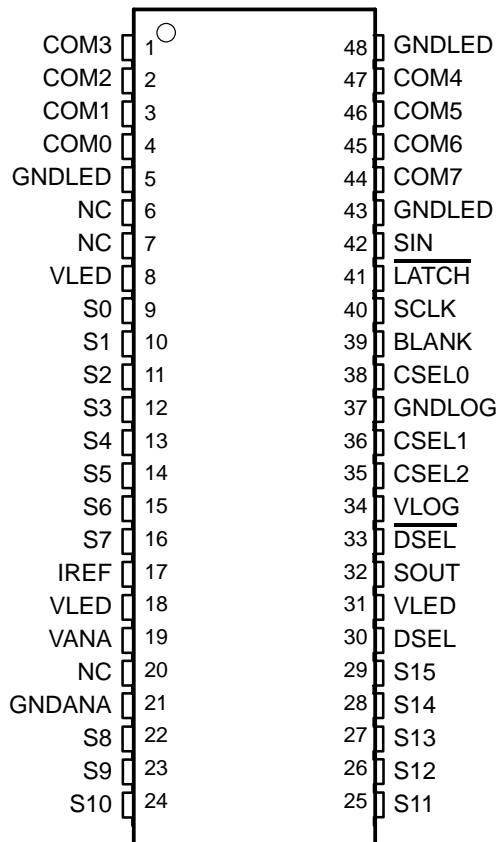

SLAS264A – MARCH 2000 REVISED SEPTEMBER 2002

- **Drive Capability:**
 - Segment . . . 30 mA × 16 Bits
 - Common . . . 640 mA
- **Constant Current Output . . . 3 mA to 30 mA (Current Value Setting for All Channels Using External Resistor)**
- **Constant Current Accuracy ±6% (Maximum Error Between Bits)**
- **Data Input: Clock Synchronized Serial Input**
- **LED Type Applied Cathode Common**
- **Logic Power Supply Voltage 4.5 V to 5.5 V**
- **LED Power Supply Voltage 4.5 V to 5.5 V**
- **Operating Frequency . . . 10 MHz**
- **Operating Free-Air Temperature Range –20°C to 85°C**
- **48-Pin SSOL Package**

description

The TLC5920 is an LED driver incorporating a 16-channel shift register, data latch, and constant current circuitry with current value control and 8-channel common driver into a single chip. The constant output current is capable of 30 mA for 16 bits simultaneously, and the current value can be set by one external register. This device also includes a 16-bit segment driver and 8-bit common driver; therefore, the monochrome LED array with 16 × 8 dots can be driven by only one TLC5920, and a two-color LED array with 16 x 16 dots can be driven by two TLC5920s.

DL PACKAGE

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

TLC5920 16x8 BIT LED DRIVER/CONTROLLER

SLAS264A – MARCH 2000 REVISED SEPTEMBER 2002

functional block diagram

Terminal Functions

TERMINAL NAME	NO.	I/O	DESCRIPTION																																				
BLANK	39	I	Blank(light off). By turning all the output for the common driver off, the LED is turned off. When BLANK is high, the LED is turned off.																																				
COM0 – COM7	4, 3, 2, 1, 47, 46, 45, 44	O	LED common driver output																																				
CSEL0 – 2	38, 36, 35	I	Common driver select. One terminal out of COM0 through COM7 is selected. <table style="margin-left: auto; margin-right: auto; border-collapse: collapse;"> <tr> <td style="padding: 0 10px;">2</td> <td style="padding: 0 10px;">1</td> <td style="padding: 0 10px;">0</td> <td style="padding: 0 10px;">Common Driver</td> </tr> <tr> <td>L</td> <td>L</td> <td>L</td> <td style="text-align: center;">0</td> </tr> <tr> <td>L</td> <td>L</td> <td>H</td> <td style="text-align: center;">1</td> </tr> <tr> <td>L</td> <td>H</td> <td>L</td> <td style="text-align: center;">2</td> </tr> <tr> <td>L</td> <td>H</td> <td>H</td> <td style="text-align: center;">3</td> </tr> <tr> <td>H</td> <td>L</td> <td>L</td> <td style="text-align: center;">4</td> </tr> <tr> <td>H</td> <td>L</td> <td>H</td> <td style="text-align: center;">5</td> </tr> <tr> <td>H</td> <td>H</td> <td>L</td> <td style="text-align: center;">6</td> </tr> <tr> <td>H</td> <td>H</td> <td>H</td> <td style="text-align: center;">7</td> </tr> </table>	2	1	0	Common Driver	L	L	L	0	L	L	H	1	L	H	L	2	L	H	H	3	H	L	L	4	H	L	H	5	H	H	L	6	H	H	H	7
2	1	0	Common Driver																																				
L	L	L	0																																				
L	L	H	1																																				
L	H	L	2																																				
L	H	H	3																																				
H	L	L	4																																				
H	L	H	5																																				
H	H	L	6																																				
H	H	H	7																																				
$\overline{\text{DSEL}}$	33	I	Display select. When $\overline{\text{DSEL}}$ is high, the LED is turned off. Note that, when BLANK is high, the LED is turned off with no regard to the $\overline{\text{DSEL}}$ input.																																				
DSEL	30	O	Display select output. The inverted data of $\overline{\text{DSEL}}$ is clocked out.																																				
GNDANA	21		Analog ground																																				
GNDLED	5, 43, 48		LED driver ground																																				
GNDLOG	37		Logic ground																																				
IREF	17	I	Constant current control setting. The LED current is set to the desired value by connecting an external resistor between IREF and GND.																																				
$\overline{\text{LATCH}}$	41	I	Latch. When $\overline{\text{LATCH}}$ is high, data on the shift register goes through latch. When $\overline{\text{LATCH}}$ is low, data is latched.																																				
SIN	42	I	Serial input for display																																				
SOUT	32	O	Serial output for display																																				
SCLK	40	I	Synchronous clock input for serial data transfer. The input data of SIN is synchronized to the rising edge of SCLK, and transferred to SOUT.																																				
S0 – S15	9, 10, 11, 12, 13, 14, 15, 16, 22, 23, 24, 25, 26, 27, 28, 29	O	LED segment driver output																																				
VANA	19		Analog power supply voltage																																				
VLOG	34		Logic power supply voltage																																				
VLED	8, 18, 31		LED driver power supply voltage

16x8 BIT LED DRIVER/CONTROLLER

SLAS264A – MARCH 2000 REVISED SEPTEMBER 2002

absolute maximum ratings† (see Note 1)

Logic supply voltage, $V_{(LOG)}$	– 0.3 V to 7 V
LED supply voltage, $V_{(LED)}$	– 0.3 V to 7 V
Analog supply voltage, $V_{(ANA)}$	– 0.3 V to 7 V
Output current, $I_{OH(S)}$	– 32 mA
Output current, $I_{OL(C)}$	650 mA
Input voltage range, V_I	– 0.3 V to $V_{(LOG)} + 0.3$ V
Output voltage range, V_O	– 0.3 V to $V_{(LOG)} + 0.3$ V
Continuous total power dissipation	1500 mW
Thermal resistance	83°C/W
Operating free-air temperature range (see Note 2), T_A	– 20 to 85°C
Storage temperature range, T_{stg}	–40°C to 125°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. All voltage values are with respect to GND terminal.
2. $T_J \leq 150^\circ\text{C}$ (refer to appendix thermal condition).

recommended operating conditions

dc characteristics (see Note 3)

PARAMETER	TEST CONDITIONS	MIN	NOM	MAX	UNIT
Logic supply voltage, $V_{(LOG)}$		4.5	5	5.5	V
LED supply voltage, $V_{(LED)}$		4.5	5	5.5	V
Analog power supply, $V_{(ANA)}$		4.5	5	5.5	V
Voltage between GND and $V_{(DEF)}$, $G_{(DEF)}$	$G_{(DEF)} = GND_{(LOG)} - GND_{(LED)}$	–0.3	0	0.3	V
High-level input voltage, V_{IH}		2.0		$V_{(LOG)}$	V
Low-level input voltage, V_{IL}		$GND_{(LOG)}$		0.8	V
High-level output current, I_{OH}	$V_{(LOG)} = 4.5\text{V}$, SOUT, DSEL			–1	mA
High-level output current, $I_{OH(S)}$	S0 to S15			–30	
Low-level output current, I_{OL}	$V_{(LOG)} = 4.5\text{V}$, SOUT, DSEL			1.6	mA
Low-level output current, $I_{OL(C)}$	DUTY = 1/16, COM0 to COM7			640	
Operating free-air temperature range, T_A (see Note 2)		–20		85	°C

- NOTES: 2. $T_J \leq 150^\circ\text{C}$ (refer to appendix thermal condition).
3. V_{ANA} must be same as V_{LED} .

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
