

NEW PRODUCT	 DIGILENT A National Instruments Company	Release Year 2019	Released Quarter Q3
Digilent Part Number 410-392		Category Pmods	

OVERVIEW

Product Name: Pmod ToF: Time of Flight Sensor	
Product Subtitle: Enables optical distance sensing at low power	
Product Description: The Pmod ToF (Time of Flight) is a sensor that enables optical distance sensing at low power. The on-chip digital signal processor on Renesas ISL29501 calculates the time it takes for light emitted by the ToF to travel to the target and back, which is proportional to the distance to the target. The Pmod ToF can measure distances of up to five meters. It operates using the principle of Square Wave Modulated Indirect Time of Flight (SWM-ITOF) in the frequency domain and obtains distance measurements from the phase shift. The sensing is done by an external emitter (LED) and detector (Photodiode)
