

# It's a "Snap"

Fair-Rite announces a new series of snap on assemblies for round cables. The capsule shaped assemblies are both functional and ergonomic. Available in five sizes they will fit cables from 4mm to 12.7mm in diameter and provide impedance of 150 - 315 ohms @ 100 MHz. The housings are polypropylene with a flammability rating of UL94-V0. A kit containing parts in both 44 and newly developed 31 material, which extends useful range to below 25MHz is available.
