**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

**Object of Declaration: MCP1662 LED Driver Evaluation Board**

EU Declaration of Conformity

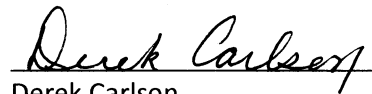

This declaration of conformity is issued by the manufacturer.

The development/evaluation tool is designed to be used for research and development in a laboratory environment. This development/evaluation tool is not a Finished Appliance, nor is it intended for incorporation into Finished Appliances that are made commercially available as single functional units to end users under EU EMC Directive 2004/108/EC and as supported by the European Commission's Guide for the EMC Directive 2004/108/EC (8<sup>th</sup> February 2010).

This development/evaluation tool complies with EU RoHS2 Directive 2011/65/EU.

For information regarding the exclusive, limited warranties applicable to Microchip products, please see Microchip's standard terms and conditions of sale, which are printed on our sales documentation and available at [www.microchip.com](http://www.microchip.com).

### NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our web site ([www.microchip.com](http://www.microchip.com)) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is “DSXXXXXXA”, where “XXXXXX” is the document number and “A” is the revision level of the document.

For the most up-to-date information on development tools, see the MPLAB® IDE online help. Select the Help menu, and then Topics to open a list of available online help files.

## INTRODUCTION

This chapter contains general information that will be useful to know before using the MCP1662 LED Driver Evaluation Board. Items discussed in this chapter include:

- Document Layout
- Conventions Used in this Guide
- Recommended Reading
- The Microchip Web Site
- Customer Support
- Document Revision History

## DOCUMENT LAYOUT

This document describes how to use the MCP1662 LED Driver Evaluation Board as a development tool. The manual layout is as follows:

- **Chapter 1. “Product Overview”** – Important information about the MCP1662 LED Driver Evaluation Board.
- **Chapter 2. “Installation and Operation”** – Includes instructions on how to get started with this user's guide and a description of the user's guide.
- **Appendix A. “Schematic and Layouts”** – Shows the schematic and layout diagrams for the MCP1662 LED Driver Evaluation Board.
- **Appendix B. “Bill of Materials (BOM)”** – Lists the parts used to build the MCP1662 LED Driver Evaluation Board.

# MCP1662 LED Driver Evaluation Board User's Guide

## CONVENTIONS USED IN THIS GUIDE

This manual uses the following documentation conventions:

### DOCUMENTATION CONVENTIONS

Description	Represents	Examples
<b>Arial font:</b>		
Italic characters	Referenced books	<i>MPLAB<sup>®</sup> IDE User's Guide</i>
	Emphasized text	...is the <i>only</i> compiler...
Initial caps	A window	the Output window
	A dialog	the Settings dialog
	A menu selection	select Enable Programmer
Quotes	A field name in a window or dialog	"Save project before build"
Underlined, italic text with right angle bracket	A menu path	<u><i>File&gt;Save</i></u>
Bold characters	A dialog button	Click <b>OK</b>
	A tab	Click the <b>Power</b> tab
N'Rnnnn	A number in verilog format, where N is the total number of digits, R is the radix and n is a digit.	4'b0010, 2'hF1
Text in angle brackets < >	A key on the keyboard	Press <Enter>, <F1>
<b>Courier New font:</b>		
Plain Courier New	Sample source code	#define START
	Filenames	autoexec.bat
	File paths	c:\mcc18\h
	Keywords	_asm, _endasm, static
	Command-line options	-Opa+, -Opa-
	Bit values	0, 1
	Constants	0xFF, 'A'
Italic Courier New	A variable argument	<i>file.o</i> , where <i>file</i> can be any valid filename
Square brackets [ ]	Optional arguments	mcc18 [options] <i>file</i> [options]
Curly brackets and pipe character: {   }	Choice of mutually exclusive arguments; an OR selection	errorlevel {0 1}
Ellipses...	Replaces repeated text	var_name [, var_name...]
	Represents code supplied by user	void main (void) { ... }

## RECOMMENDED READING

This user's guide describes how to use MCP1662 LED Driver Evaluation Board. Other useful documents are listed below. The following Microchip documents are available and recommended as supplemental reference resources.

- **MCP1662 Data Sheet - “High-Voltage Step-Up LED Driver with UVLO and Open Load Protection” (DS20005316)**
- **MCP1661 Data Sheet - “High-Voltage Integrated Switch PWM Boost Regulator with UVLO” (DS20005315)**

## THE MICROCHIP WEB SITE

Microchip provides online support via our web site at [www.microchip.com](http://www.microchip.com). This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

## CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at:  
<http://www.microchip.com/support>.

## DOCUMENT REVISION HISTORY

### Revision A (June 2014)

- Initial Release of this Document.

---

NOTES:

---

## Chapter 1. Product Overview

---

### 1.1 INTRODUCTION

This chapter provides an overview of the MCP1662 and covers the following topics:

- MCP1662 Short Overview
- What is the MCP1662 LED Driver Evaluation Board?
- What the MCP1662 LED Driver Evaluation Board Kit Contains

### 1.2 MCP1662 SHORT OVERVIEW

The MCP1662 is a compact, battery operated, fixed frequency, step-up DC/DC converter optimized as an LED constant current generator. This product provides an easy-to-use power supply solution for LEDs, with a minimum number of external components for applications powered by two-cell or three cell alkaline, NiCd or NiMH batteries, one-cell Li-Ion or Li-Polymer batteries.

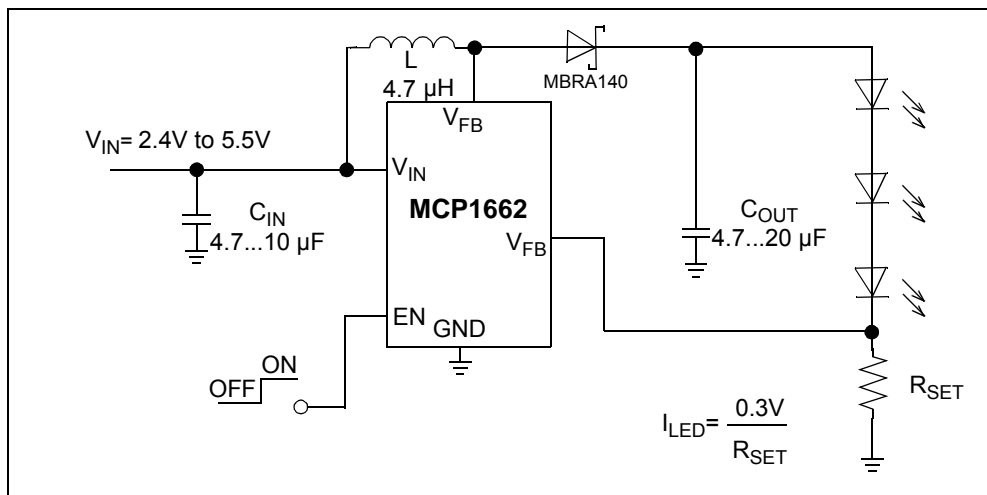

The MCP1662 is a boost device with PWM-only functionality that operates at a fixed 500 kHz switching frequency. The device has an operating input voltage range from 2.4V to 5.5V (with a typical undervoltage of 2.3V to start and 1.85V to stop). Compared to its counterpart, the MCP1661, the reference voltage is only 300 mV in order to minimize the losses on the sense resistor and increase the overall efficiency of the application.

The LED can be turned on and off with a variable duty cycle applied to the EN pin for applications that require current dimming (variable lighting). Compared to its counterpart, the MCP1661, which is designed to be a voltage source, the start-up time for the MCP1662 has been decreased in order to obtain higher dimming frequencies.

The MCP1662 can supply up to 100 mA of current for a string of four white LEDs (LED forward voltage of 3.2V) from a 3V or higher input voltage source. More detailed information regarding the current capabilities of the MCP1662 are available in the data sheet.

In order to obtain a compact solution, the device is available in a small 5-Lead SOT-23 and an 8-Lead 2X3 TDFN package.

# MCP1662 LED Driver Evaluation Board User's Guide

**FIGURE 1-1:** Typical MCP1662 LED Driver Boost Converter Application.

## 1.3 WHAT IS THE MCP1662 LED DRIVER EVALUATION BOARD?

The MCP1662 LED Driver Evaluation Board is used to evaluate and demonstrate Microchip Technology's MCP1662 product. This board demonstrates the MCP1662 in a boost-converter application supplied by two AA batteries, or from an external voltage source, which drives a string of LEDs with three selectable currents. The MCP1662 LED Driver Evaluation Board was developed to help engineers reduce the product design cycle time.

Three output currents can be selected: 30 mA, 60 mA and 90 mA. The output current can be changed with a dual switch that changes the external LED current sense equivalent resistance ( $R_{SET}$ ).

An enable switch is used to enable and disable the converter. When enabled, the MCP1662 will regulate the output current; when disabled, the current consumed from the battery by the device is typically less than 20 nA.

## 1.4 WHAT THE MCP1662 LED DRIVER EVALUATION BOARD KIT CONTAINS

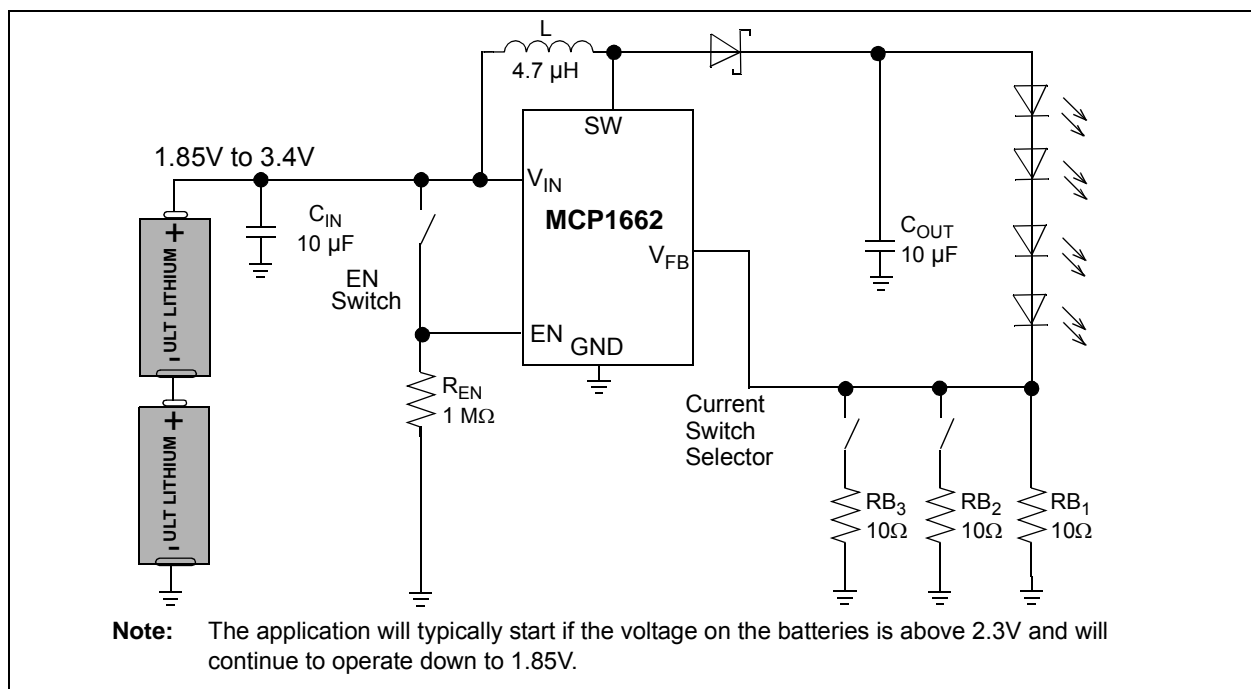

This MCP1662 LED Driver Evaluation Board kit includes:

- MCP1662 LED Driver Evaluation Board (ADM00555)
- Important Information Sheet

## Chapter 2. Installation and Operation

### 2.1 INTRODUCTION

The MCP1662 has been developed for applications that require driving a string of LEDs from a low-voltage source. Using a peak current mode control the MCP1662 offers good line and load step responses over a wide output range (up to 32V total output voltage or 10 white LEDs). The integration of compensation and protection circuitry is an important feature that minimizes the required number of additional components.

**FIGURE 2-1:** MCP1662 Boost 30, 60, 90 mA Constant Current Application.

### 2.2 FEATURES

The MCP1662 LED Driver Evaluation Board has the following features:

- It can be powered by two-cell Alkaline, NiCd, NiMH or Lithium AA cell batteries
- Input Voltage range ( $V_{IN}$ ): 2.4V to 5.5V, with  $V_{IN} < V_{OUT}$
- Undervoltage Lockout: 2.3V to Start; 1.85V to Stop
- Adjustable Output Current: 30 mA, 60 mA or 90 mA, selected using a dual switch on-board
- PWM Switching Frequency: 500 kHz
- Enable converter using switch on board
- 1.3A Peak Input Current Limit
- Overtemperature Protection (if the die temperature exceeds +150°C, with 15°C hysteresis)
- Open Load Protection in case of: LED fail or FB disconnected/fault

# MCP1662 LED Driver Evaluation Board User's Guide

## 2.3 GETTING STARTED

The MCP1662 LED Driver Evaluation Board is fully assembled and tested to evaluate and demonstrate the MCP1662 product. This board requires the use of external lab supplies or two AA batteries.

### 2.3.1 Power Input and Output Connection

#### 2.3.1.1 POWERING THE MCP1662 LED DRIVER EVALUATION BOARD

Soldered test points are available for input voltage connections. The maximum input voltage should not exceed 5.5V. The output current will not remain in regulation for input voltages that are greater than or equal to the forward voltage of the LEDs.

The MCP1662 LED Driver Evaluation Board was designed to help the engineer validate the MCP1662 device. The package selected for the MCP1662 LED Driver Evaluation Board is 5-Lead SOT-23.

SW1 is the enable switch, which gives the state of the converter, On or Off. A soldered test point is also available for the EN pin, that can be used for PWM dimming. The second switch is used to modify the value of the sense resistor, in order to modify the LED current and achieve analog dimming.

#### 2.3.1.2 BOARD POWER UP PROCEDURE:

1. Connect input supply as shown in [Figure 2-2](#) or insert two AA batteries in the battery holder on the bottom side of the board. Respect the polarity of the batteries.
2. Using the EN switch, the state of the converter is changed from On to Off.
3. Change the value of the output current using the Current Switch Selector. There are three available currents: 30 mA, 60 mA and 90 mA. When changing the positions of the Current Switch Selector, the value of the sense resistor is modified and the brightness of the LEDs change.

Additional test points are available to visualize different signals (SW, output current, FB) or to modify the output current by dimming, using the EN pin.

**FIGURE 2-2:** MCP1662 LED Driver Evaluation Board Setup.

## 2.3.1.3 ADJUSTABLE LED CURRENT BY RECALCULATING THE SENSE RESISTOR (ANALOG DIMMING)

The Sense Resistor ( $R_{SET}$ ) is used to modify the value of the output current. The value for the resistor can be calculated using [Equation 2-1](#):

### EQUATION 2-1:

$$R_{SET} = \left[ \frac{V_{FB}}{I_{LED}} \right]$$

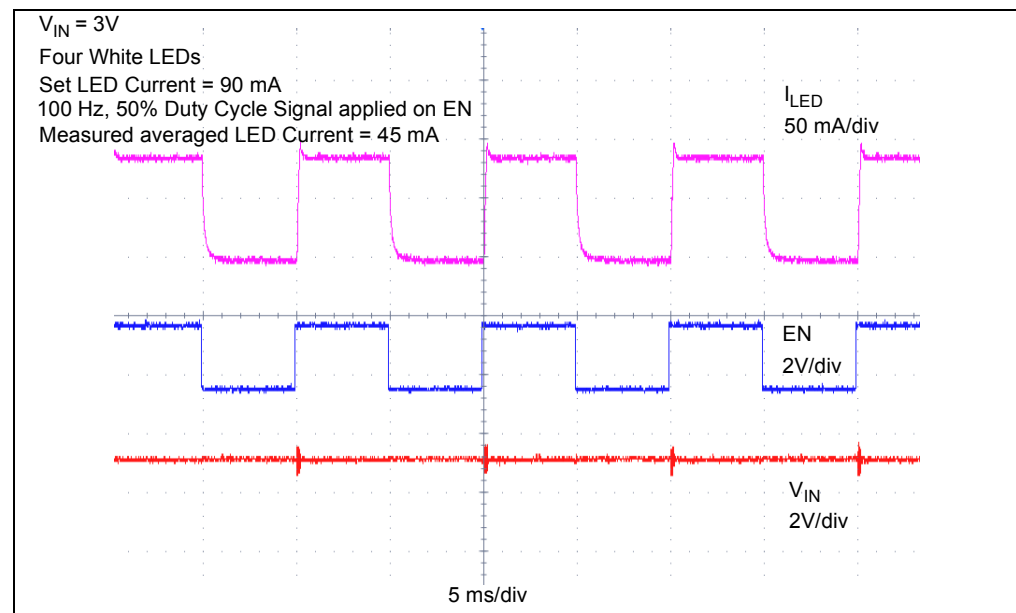

Where:  $V_{FB} = 0.300V$

**Note:** If the Sense Resistor is recalculated, the Current Switch Selector will not have the same functionality, as the Sense Resistor will add a resistor in parallel with the calculated component and the value of the current will be different than the one specified in the User Guide. The Sense Resistor will be used in place of the  $RB_x$  resistors.

## 2.3.1.4 ADJUSTABLE LED CURRENT BY USING THE EN PIN (PWM DIMMING)

The MCP1662 allows PWM dimming by turning the LED on and off with a variable duty cycle PWM signal applied to the EN pin. The maximum frequency for dimming is limited by the start-up and the load. By varying the duty cycle of the PWM signal applied on the EN input, the LED current changes linearly. An example of PWM dimming can be observed in [Figure 2-3](#).

By removing the 0 Ohms R1 Resistor, the soldered connectors (J3 and J4) can be used to either insert a multimeter to measure the LED current or to create a loop through which, with the help of an oscilloscope current probe, the current through the LED can be visualized.

**FIGURE 2-3:** PWM Dimming with MCP1662.
