

MAX32620FTHR Rapid Development Platform

Evaluates: MAX32620,
MAX77650, MAX17055

General Description

The MAX32620FTHR board is a rapid development platform designed to help engineers quickly implement battery-optimized solutions with the MAX32620 Arm® Cortex®-M4 microcontroller with FPU. The board also includes the MAX77650 ultra-low power PMIC and MAX17055 fuel gauge to provide efficient power conversion and battery management with minimal board space. The form factor is a small 0.9in x 2.0in dual-row header footprint that is compatible with breadboards and off-the-shelf peripheral expansion boards. In addition to the dual-row headers, there are also two 12-pin Pmod™-compatible socket connectors for more expansion options. Also on board are common user-interface peripherals including two RGB indicator LEDs and two pushbuttons. These provide a power-optimized flexible platform for quick proofs-of-concept and early software development to enhance time to market.

Visit <https://developer.mbed.org/platforms/MAX32620FTHR/> to start developing with this board.

Ordering Information appears at end of data sheet.

Arm and Cortex are registered trademarks of Arm Limited (or its subsidiaries) in the US and/or elsewhere.

Pmod is a trademark of Digiilent Inc.

Benefits and Features

- Convenient Development Platform
 - 0.9in x 2.0in DIP Form Factor
 - Breadboard Compatible
 - Feather Wing Compatible
 - Pmod-Compatible Sockets
 - Supports SPI, UART, I²C, and GPIO
 - Accessible from Both Sides of Board
 - Integrated Battery Management
 - Single-Cell Li+ Charger
 - Fuel Gauge
 - User Interface Peripherals
 - Two RGB LEDs
 - Two Pushbuttons
- MAX32620 Microcontroller Features
 - 96MHz Arm Cortex-M4 Microcontroller with FPU
 - 2048KB Flash
 - 256KB SRAM
 - Full-Speed USB
 - SPI, I²C, UART, and 1-Wire
 - 4-Channel 10-Bit ADC
 - 49 Dual Voltage GPIO
 - 3.9mm x 4.1mm, 81-Bump WLP
- MAX77650 Ultra-Low Power PMIC Features
 - Smart Power Selector Charger
 - Supports Li+/Li-Poly Batteries
 - 7.5mA to 300mA Charge Current
 - Single Inductor Multiple Output (SIMO) Buck-Boost Regulator
 - 3 Outputs from a Single Inductor
 - 150mA LDO Regulator
 - I²C Configurable
 - 2.75mm x 2.15mm, 30-Bump WLP
- MAX17055 Fuel Gauge Features
 - ModelGauge m5 EZ
 - Eliminates Battery Characterization
 - Eliminates Coulomb Counter Drift
 - 7µA Operating Current
 - 1.4mm x 1.5mm, 9-Bump WLP

Figure 1. DIP Pinout

Detailed Description

The MAX32620FTHR board is designed to provide a compact, power-optimized, rapid development platform. It provides all the basic system management functions for the MAX32620 Arm Cortex-M4 microcontroller, as well as a few simple user-interface elements and a variety of expansion options for customization. The dual inline pinout and form-factor for this board are based on the Adafruit feather series of boards. It is intended to be compatible with many of their peripheral wings, but it is not guaranteed to work with all featherwings.

Firmware Development

The simplest way to develop firmware for the MAX32620FTHR board is through the mbed development site. At the mbed site, import examples into their online IDE, edit, compile, and load them into the board without installing any software. The board is preloaded with a USB bootloader that enables drag-and-drop firmware updates by pressing the BOOT button when exiting reset. Go to <https://developer.mbed.org/platforms/MAX32630FTHR/> to start programming. Additional tools are also available at the Maxim product page www.maximintegrated.com/max32620fthr.

MAX32620FTHR Rapid Development Platform

MAX77650, MAX17055

Power Architecture

The MAX32620FTHR is optimized for battery-powered operation, but a battery is not required. The MAX77650 PMIC includes a Smart Power Selector™ that allows the system to run directly from the charging source that comes from the Micro-USB connector. The MAX77650 also includes a configurable Li+/Li-Poly charger optimized for small batteries. The charge current is programmable from 7.5mA to 300mA.

The MAX77650 provides all the voltages needed to operate the MAX32620 efficiently with a single inductor multiple output (SIMO) buck-boost regulator. The SIMO regulator provides 1.2V, 1.8V, and 3.15V by default, and these voltages can be adjusted over the I²C interface.

In addition to the battery charger and SIMO buck-boost regulator, the MAX77650 PMIC also includes a 3-channel current sink driver, and power button monitor. The power button is available for user input after the part has powered on. The MAX32620FTHR board includes a

pushbutton connected to the button input and an RGB LED connected to the current sinks for additional user-interface options.

The MAX32620FTHR board also includes the MAX17055 fuel gauge that utilizes Maxim's ModelGauge™ m5 EZ to accurately track the state of the battery without characterization.

Expansion Connectors

The MAX32620FTHR makes connecting peripherals as easy as possible by extending common peripheral interfaces. The form factor is based on the Adafruit feather series that has a variety of peripheral wings available and is also breadboard compatible. The board also includes two Pmod-compatible pass-through socket connectors. The pass-through sockets allow connections from either side of the board to add flexibility for mechanical access and allows the top and bottom row to be swapped to accommodate different types of Pmod interfaces. Pinout diagrams and tables of pin descriptions are provided for reference.

Table 1. DIP Header J4 Pins

PIN	PORT	DESCRIPTION
1	GND	Ground
2	P3_1	UART2 Tx
3	P3_0	UART2 Rx
4	P5_2	SPIM2 MISO
5	P5_1	SPIM2 MOSI
6	P5_0	SPIM2 SCK
7	P6_0	I2CM2 SCL, pulled to 1.8V, connected to the MAX77650 and MAX17055
8	P5_7	I2CM2 SDA
9	AIN_3	ADC analog input (0V–1.8V)
10	AIN_2	ADC analog input (0V–1.8V)
11	AIN_1	ADC analog input (0V–5V)
12	AIN_0	ADC analog input (0V–5V)
13	GND	Ground
14	1V8	1.8V supply voltage (output)
15	3V3	3V supply voltage (output)
16	RSTN	Master reset signal

Table 2. DIP Header J5 Pins

PIN	PORT	DESCRIPTION
1	SYS	System power output
2	EN	Active-low power button
3	VBUS	This is connected directly to the power pin of the Micro-USB connector
4	P4_0	1-Wire® master signal
