

LEW840X, OpenSource Multiple Network Gateways

Draft Ver 0.21 Mar. 2020

IP65 Gateway, Market Ready Enclosure

LEW840X Series gateways are developed for commercial, industrial, and agriculture applications. Enclosure has either Ingress Protection IP65 or IP51. An IP65 gateway can be deployed outdoor.

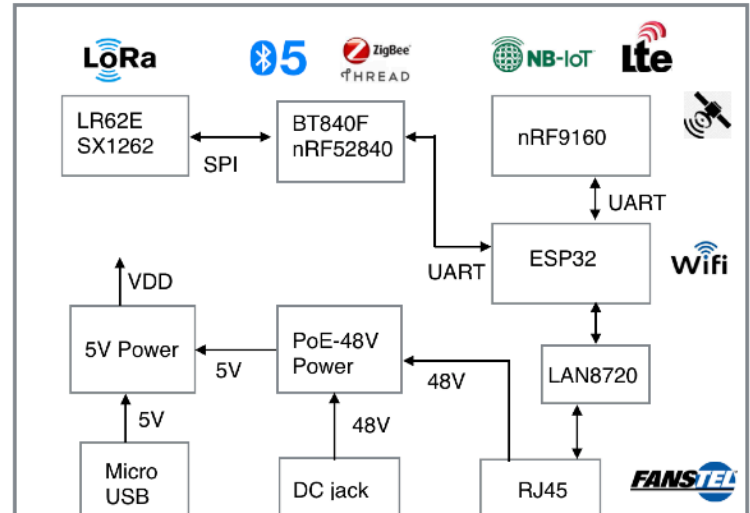

Multiple Network, Radio Gateways

LTE, WiFi, and Ethernet interfaces are supported simultaneously. One gateway can be deployed globally to interface with networks available locally. Operation and maintenance supports are simplified. When multiple networks are available, back-up routing can assure of cloud connection during one or more networks failures.

- nRF9160: LTE-M and NB-IoT module with GPS receiver
- ESP32M16 WiFi module: WiFi, Ethernet with Power over Ethernet
- BT840F(nRF52840): BLE 5, Thread, Zigbee (IEEE 802.15.4) module; supports mesh.
- BT40F(nRF5340): BLE5.1, Thread, Zigbee (IEEE 802.15.4) module; supports mesh, directional finding.
- LR62E (SX1262): LoRa supporting cloud connection.

Demonstration quality source codes for connecting sensors to AWS, Google, or MicroSoft cloud servers are

Open Source IoT Gateway supporting multiple radios, multiple networks

available. They can reduce your development time and cost, allowing shorter time to market.

Nordic nRF52840, nRF5340 and nRF9160 have CryptoCell coprocessor embedded. Secure connection can be established from Bluetooth mesh to cloud server.

Private label and custom hardware can be supported.

Some BLE 5 Gateways will be upgraded to BLE 5.1 in the near future.

LEW840X, OpenSource Multiple Network Gateways

1. Introduction

One LEW840X Series gateway can be deployed globally to interface with networks available locally. Operation and maintenance supports are simplified. When multiple networks are available, back-up routing can assure of cloud connection during one or more networks failures.

Alternatively, you can select a single network interface to reduce product cost.

LEW840X Series supports LTE-M, NB-IoT, WiFi, and Ethernet interfaces. It supports Bluetooth 5, 5.1, Thread, Zigbee, and LoRa on the device side.

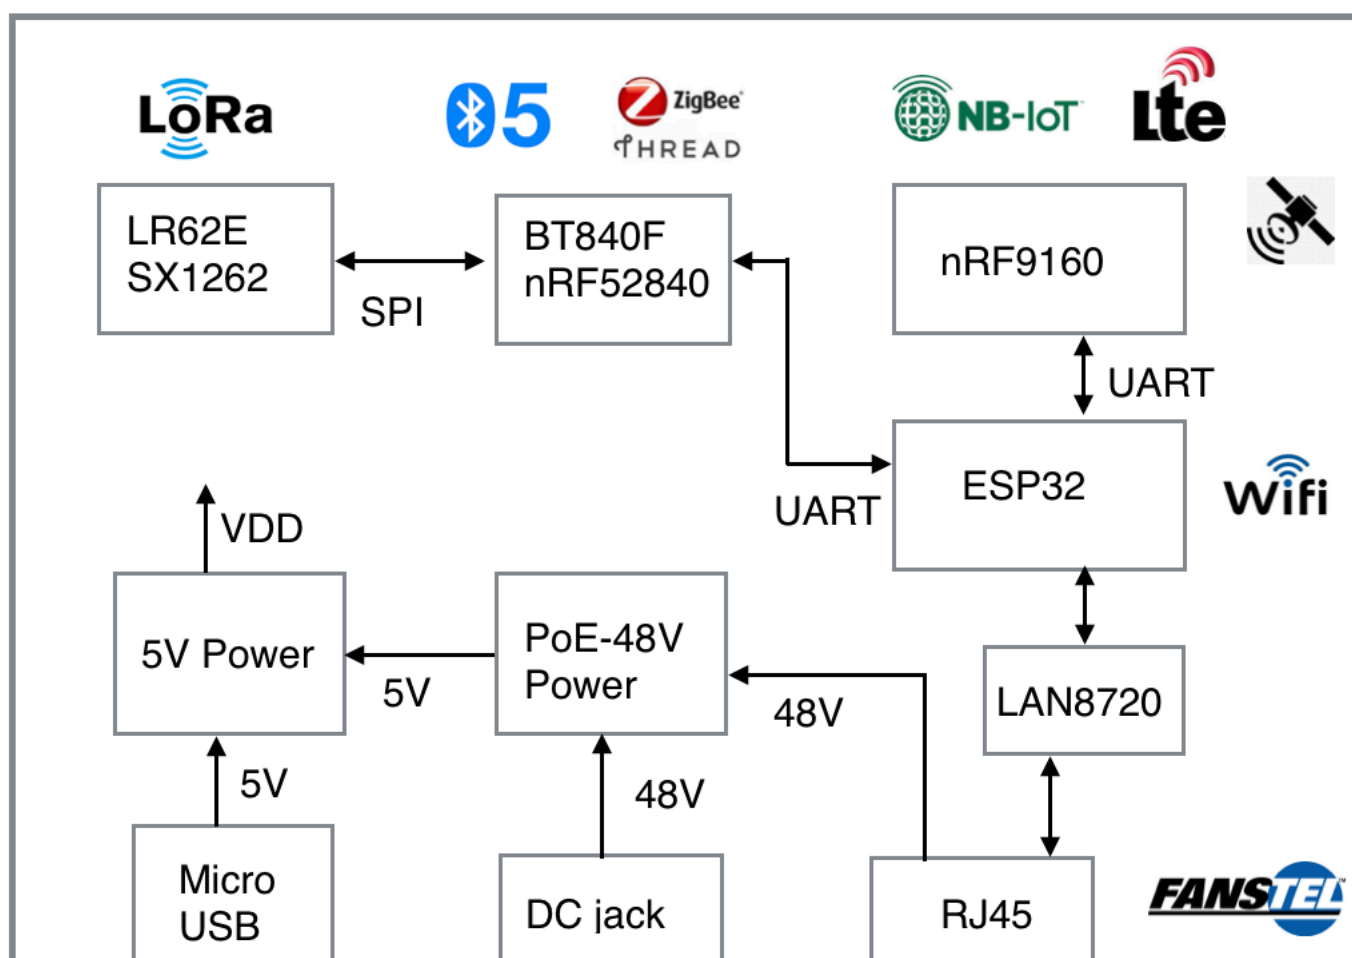

2. Specifications

At the heart of LEW840X Series gateway is an ESP32M16 module with an ESP32 D0WD SoC. It has an Xtensa dual core 32 bit LX6 microprocessors, up to 600 MIPS. A Microchip LAN8720 is the Ethernet PHY interface.

ESP32 communicates with nRF9160 LTE-M/NB/IoT module using an UART interface. It also communicates with BT840F BLE 5 module using a second UART. BT840F controls LoRa module LR62E through an SPI interface.

BT840F supports 802.15.4 Thread and Zigbee radio protocols. It can be replaced with BT40F, an RF5340 module supporting BLE 5.1, Thread, and Zigbee.

Gateway can be powered by a 5V micro USB AC adapter, a 48V DC power supply, or powered through Ethernet cable

Open Source IoT Gateway supporting multiple radios, multiple networks

LEW840X, OpenSource Multiple Network Gateways

LEW840X Part Numbers

Possible part numbers of LEW840X Series are listed below.

L E W R 840E 6

L: LTE-M/NB-IoT, Nordic nRF9160; Missing: not supported

E: Ethernet, ESP32 module/LAN8720 PHY

W: WiFi with integrated antenna; **E:** WiFi with an u.FL for **E**xternal antenna.

R: LoRa, LR62E, SX1262 module; Missing: not supported.

840E: BLE 5 module, **BT840E**, **BT840F**, **BT840XE**, **BT840X**; BLE 5.1 module, **BT40E**, **BT40F**, **BT40XE**, **BT40X**.

6: IP65 Ingress Protection; **5:** IP51 Ingress Protection.

P: Power over Ethernet; Missing: PoE not supported.

- LTE-M/NB-IoT interface needs an external antenna. It is an optional feature.
- Ethernet interface is always supported.
- Bluetooth interface is supported by one of 4 BLE 5 modules or 4 BLE 5.1 modules. Module can be with an integrated antenna, with an external antenna, and with an integrated power amplifier to boost TX power to +21 dBm. IEEE 802.15.4 Thread and Zigbee interfaces are supported by BLE modules.
- WiFi interface is supported with an integrated antenna or an external antenna.
- LoRa interface is an optional feature. An external antenna is required.
- Enclosure can be IP65 or IP51 rated.
- Power over Ethernet (PoE) can be supported for all gateways. IP51 gateway without PoE is powered by a micro USB AC adapter. IP65 gateway without PoE is powered by 48V DC.
- Up to 3 external antennas can be supported. LTE and LoRa interfaces need external antennas. Integrated antenna and external antenna can be supported for both BLE and WiFi.

LTE-M/NB-IoT Interfaces

LEW840X gateway uses a Nordic nRF9160 SICA module supporting LTE-M, NB/IoT and with GPS receiver. An external LTE antenna is used. GPS receiver amplifier and antenna is integrated.

Microcontroller:

- ARM® Cortex® -M33
- 1 MB flash, 256 kB low leakage RAM
- ARM® Trustzone®
- ARM® Cryptocell 310
- Up to 4x SPI master/slave
- Up to 4x I2C compatible two-wire master/slave.
- Up to 4x UART (CTS/RTS)
- I2S
- Digital microphone interface (PDM)
- 4x pulse width modulator (PWM) unit
- 12-bit, 200 ksps ADC - 8 configurable channels with programmable gain
- 3x 32-bit timer with counter mode
- 2x real-time counter (RTC)
- Programmable peripheral interconnect (PPI)
- 32 general purpose I/O pins

LTE modem:

- Transceiver and baseband

LEW840X, OpenSource Multiple Network Gateways

- 3GPP LTE release 13 Cat-M1 and Cat-NB1 compliant
 - 3GPP release 13 coverage enhancement
- 3GPP LTE release 14 Cat-NB2 compliant
- GPS receiver
 - GPS L1 C/A supported
 - GPS antenna and amplifier integrated
- RF transceiver for global coverage
 - Up to 23 dBm output power
 - -108 dBm sensitivity (LTE-M) for low band, -107 dBm for mid band
 - An u.FL connector for external LTE antenna
- LTE band support in hardware:
 - Cat-M1: B1, B2, B3, B4, B5, B8, B12, B13, B14, B17, B18, B19, B20, B25, B26, B28, B66
 - Cat-NB1/NB2: B1, B2, B3, B4, B5, B8, B12, B13, B17, B18, B20, B25, B26, B28, B66
- Nano SIM card connector on-board.
- Power saving features: DRX, eDRX, PSM
- IP v4/v6 stack
- Secure socket (TLS/DTLS) API

WiFi or Ethernet Interfaces

ESP32M16 WiFi module with an Expressif ESP32 D0WD, dual core Xtensa 32 bit processor establishes and maintains connection to a cloud server.

Mongoose OS OpenSource codes for connecting to Fanstel development server and to **Google Cloud IoT Core, AWS, and Microsoft** cloud servers are available. They can be used as a base to develop interface with other servers.

Link to download additional document and source codes:

<http://www.fanstel.com/download-opensource/>

Brief descriptions of WiFi module ESP32M16:

- Expressif ESP32 D0WD, Xtensa dual core 32 bit LX6 microprocessors, up to 600 MIPS.
- 448KB ROM, 520KB SRAM, 16 MB flash
- 16KB SRAM in RTC
- 802.11 b/g/n, 802.11n (2.4 GHz), up to 150 Mbps

LEW840X, OpenSource Multiple Network Gateways

Bluetooth 5, Thread, Zigbee Interfaces

Bluetooth 5 module supports Bluetooth 5, Thread, and Zigbee radio interfaces. It also manages LoRa module LR62E. One of four Bluetooth 5 modules can be installed.

- BT840F, an nRF52840 module. It is FCC certified with max. TX power of +8.46 dBm.
- BT840E, an nRF52840 module with an u.FL connector, panel mounted SMA connector for an external antenna. It passes FCC certification testing with ANT060, a 6 dBi antenna.
- BT840X, an nRF52840 module with SKY66112 power amplifier. It passes FCC testings at +21 dBm TX.
- BT840XE, an nRF52840 + SKY66112 module with an u.FL connector, panel mounted SMA connector for an external antenna. It passes FCC testings with ANT000, a 0 dBi antenna.

Maximum TX power of BT840X is about 13.8 dB higher than that of BT840F. The receiver gain of SKY66112 is measured at 1.5 dB. Comparing to BT840F, BT840X has 15 dB more link budget. In free space (antenna high above ground and without obstruction), 15 dB link budget can more than quadruple range. Or, it is enough to penetrate 2 dry walls in typical house in the U.S.A.

If you are developing a mesh network or sensor using BT840X/XE, a gateway with BT840X/XE will provide the longest possible Bluetooth, Thread or Zigbee range.

If this gateway is to receive data from various (Fanstel and non Fanstel) sensors, beacons, BT840E with ANT060 antenna will provide the best receiver sensitivity if antennas are deployed in parallel (horizontal polarization).

Brief specifications of BT840F Series modules.

- nRF52840 QIAA, ARM Cortex M4F, 64 MHz
- ARM® TrustZone® Cryptocell-310 co-processor
- BLE 5 data rate: 2Mbps, 1Mbps, 500kbps, 125kbps.
- IEEE 802.15.4 Thread and Zigbee data rate: 250 Kbps
- 2.4 GHz proprietary data rate: 2 Mbps, 1 Mbps
- Serial Wire Debug (SWD)
- Nordic SoftDevice Ready
- Over-the-Air (OTA) firmware update
- Flash/RAM: 1MB/256KB.
- 48 General purpose I/O pins
- Type 2 NFC-A tag with wake-on field, Touch-to-pair support
- Integrated PCB trace antenna or u.FL connector

LEW840X, OpenSource Multiple Network Gateways

Bluetooth 5.1, Thread, Zigbee Interfaces

Bluetooth 5.1 module supports Bluetooth 5, Thread, and Zigbee radio interfaces. It also manages LoRa module LR62E. One of Bluetooth 5.1 modules can be installed.

- BT40F, an nRF5340 module.
- BT40E, an nRF5340 module with an u.FL connector, panel mounted SMA connector for an external antenna.
- BT40X, an nRF52840 module with nRF21540 power amplifier.
- BT40XE, an nRF52840 + nRF21540 module with an u.FL connector, panel mounted SMA connector for an external antenna.

Nordic nRF5340 SoC has a dual core ARM Cortex™ M33 MCU. BT40F Series modules are footprint compatible with BT840F series. Firmware configuration of GPIO pins is required.

The application core ARM Cortex™ M33 can operate at 128 MHz. It has a Floating Point Unit (FPU) and hardware DSP instruction sets. It can handle Bluetooth profiles needing processing power, e.g., BLE 5.1 directional finding, audio.

Brief Specifications BT40F Series modules.

- nRF5340 QKAA, dual core ARM® Cortex M33
- Application Core
 - 128/64 MHz Cortex M33 with FPU and DSP instructions
 - 1MB flash, 512KB RAM
 - 8KB 2-way set associate cache
 - ARM® TrustZone® Cryptocell-312 co-processor
- Network core:
 - 64 MHz Cortex M33 with 2KB instruction cache
 - 256KB flash, 64KB RAM
 - 2.6 mA in RX and 3.2 mA in 0dBm TX
 - Receiver Sensitivity: -97.5 dBm at 1Mbps
 - TX power: programmable +3dBm to -20dBm
 - BLE 5.1 data rate: 2Mbps, 1Mbps, 500kbps, 125kbps.
 - IEEE 802.15.4 data rate: 250 Kbps
 - 2.4 GHz proprietary data rate: 2 Mbps, 1 Mbps

LEW840X, OpenSource Multiple Network Gateways

LoRa Interfaces

- LR62E module with Semtech SX1262 transceiver, u.FL connector.
- Up to +22 dBm transceiver (USA version) at 902 to 928 MHz.
- Panel mounted SMA connector for external antenna
- LoRa stacks for cloud connection are managed by BT840F Series or BT40F Series BLE modules.

LEW840X, OpenSource Multiple Network Gateways

Power Supply and Power over Ethernet

- Most of USB AC adapter has operating temperature range of 0°C to +40°C. AC adapter included in non-PoE IP51 gateway has this operating temperature range.
- A gateway with PoE can be powered by an PoE switch at up to 328 feet or 100 meters away.
- Fanstel single line PoE power injector, POE048 can power a gateway from 100 meters or 328 feet away. POE048 includes an AC adapter operating from -20°C to +60°C.
- IP65 enclosure has a barrel type, IP67 DC jack.

Operating Temperature Range

BLE 5 Gateways

Electronic components used in BLE 5 gateways has minimum operating temperature range of -40°C to +85°C. The followings limit operating temperature of gateways.

- Operating temperature range of USB AC adapter is 0°C to +40°C. Non PoE IP51 gateway includes an USB AC adapter. Operating temperature range is 0°C to +40°C.
- The enclosure material (ABS) used in IP51 gateway has operating temperature range, -40°C to +80°C. PoE IP51 gateway has operating temperature range of -40°C to +80°C.
- Operating temperature range of 48V DC power supply is -20°C to +60°C. Non PoE IP65 gateway has operating temperature range of -20°C to +60°C.
- The enclosure material (Sabic EXL9330) used in IP65 gateway has operating temperature range to over 125°C. PoE IP65 gateway has operating temperature range of -40°C to +85°C.

BLE5.1 Gateways

ESP32M16 and BLE 5.1 modules have operating temperature range of -40°C to +105°C. LTE module, LoRa module, and LAN8720 Ethernet PHY has operating temperature range of -40°C to +85°C. It is possible to develop limited feature gateway to operate to 105°C.

Private Label and Custom Hardware

Logo and button names are printed on a membrane. They can be customized.

Custom enclosure design and electronic hardware are available. Please contact [Fanstel](#).

PK-LEW840X Programming Kit

To load firmware into LEW840X Series gateway, a Programming Kit PK-LEW840X is required. In addition, you need the following hardware:

- nRF52840-DK, Development Kit for nRF52840 modules. Or, nRF5340-DK, Development Kit for nRF5340 modules.
- nRF9160-DK if you have LTE interface

LEW840X, OpenSource Multiple Network Gateways

3. Firmware Development and Programming

LEW840X gateways is pre-loaded with WiFi+Ethernet+LTE M (Optional) demonstration codes.

When connected to internet, LEW840X gateway sends temperature and humidity sensor data to Fanstel MQTT server. You can use Fanstel MQTT PC tool or mobile APP to monitor data.

MQTT tool or MQTT APP<->MQTT broker <->LEW840F<->BLE Sensor

It is easier to test gateway and load firmware by removing gateway PCBA from enclosure.

Ethernet and WiFi

Check the Ethernet.

- Connect UART_Bridge Board “TO WIFI(ESP)” into the JS1 of LEW840X PCBA.
- Make sure the switch on Bridge board is turn off.
- Connect micro USB to PC and open the terminal tool.

LEW840X, OpenSource Multiple Network Gateways

- Plug in the Ethernet and reset the board.
- Gateway should get DHCP IP address.

Check MQTT

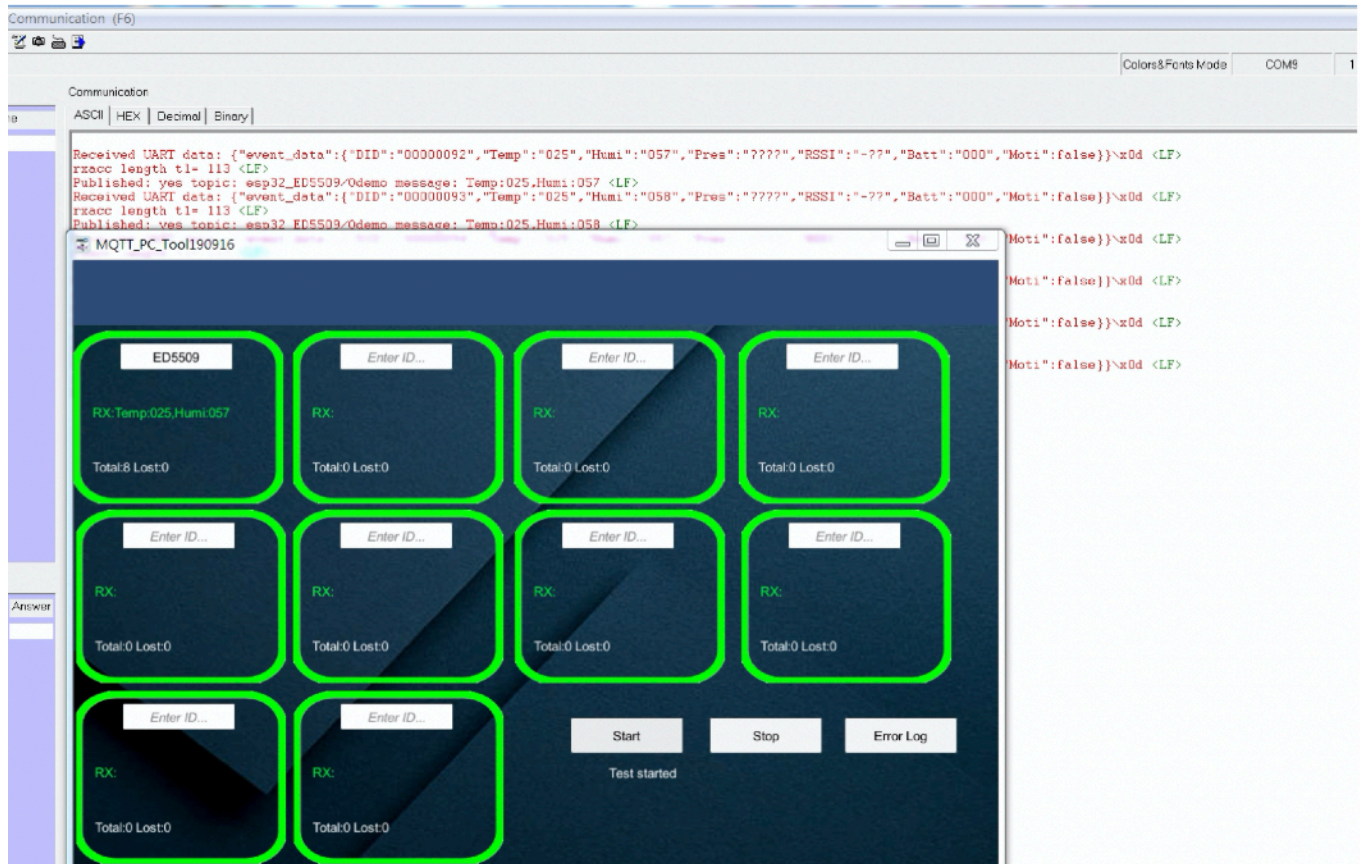

Connect UART_Bridge Board "To Log" into the JS1.

Open the MQTT PC tool and type the ID.

The ID is esp32_XXXXXX and same as AP name.

You should able see the ID in the log.

The temperature and humidity was send to MQTT broker and publish to PC tool.

Build and programming ESP32 firmware.
 Open mos.yml in folder mqtt_sensorWiFi_Ethernet_esp32
 Change the SSID and password to match your router.
 - ["wifi.sta.ssid", "FanstelSystems"]
 - ["wifi.sta.pass", "1234567890"]
 Save the file and go to command line tool.
 use command "mos build - -platform esp32"

```
C:\mos\mqtt_sensorWiFi_Ethernet_esp32>mos build --platform esp32
Connecting to https://mongoose.cloud, user test
Uploading sources (17866 bytes)
Firmware saved to C:\mos\mqtt_sensorWiFi_Ethernet_esp32\build\fw.zip
```

LEW840X, OpenSource Multiple Network Gateways

Programming the ESP32.

Connect UART_Bridge Board "TO WIFI(ESP)" into the JS1.

Make sure the switch on Bridge board is turn on.

Type command "mos flash - -port COM9"

The port number is up to your PC.

```
C:\mos\mqtt_sensorWiFi_Ethernet_esp32>mos flash --port COM9

LEW840X, OpenSource Multiple Network Gateways

Draft Ver 0.21 Mar. 2020

Open nRF connect /programmer and load the softdevice and application.
Erase and write.

Nordic Development Environment

Nordic Semiconductor provides a complete range of hardware and software development tools for the nRF52 Series devices. nRF52840 DK board is recommended for firmware development. Document and Software development tools can be downloaded by the following links.

Get start with Nordic chip and all online documents.

LEW840X, OpenSource Multiple Network Gateways

Programming the nRF9160 Module

Connected nRF9160 DK debug out to LEW840F JS3

Open nRF connect /programmer and load the softdevice and application.

Erase and write.

The MQTT ID for nRF9160 is always started at "91".

LEW840X, OpenSource Multiple Network Gateways

For example the ESP32 ID is 6CA674
The Nrf9160 ID is 91A674.
