3.45 GHz to 6.25 GHz, Tunable Band-Pass Filter

Data Sheet **HMC892ALP5E**

FEATURES

- Amplitude settling time: 200 ns
- Excellent wideband rejection: ≥30 dB
- Single-chip replacement for mechanically tuned designs
- 32-lead, 5 mm × 5 mm, RoHS compliant LFCSP package

APPLICATIONS

- Test and measurement equipment
- Military radar and electronic warfare (EW)/electronic countermeasures (ECM)
- Satellite communications (SATCOM) and space
- Industrial and medical equipment

FUNCTIONAL BLOCK DIAGRAM

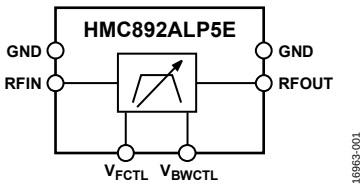

Figure 1.

GENERAL DESCRIPTION

The HMC892ALP5E is a tunable band-pass filter that features a user selectable pass-band frequency. The 3 dB filter bandwidth is approximately 8.7%. The 20 dB filter bandwidth is approximately 23.8%. The center frequency can be varied between 3.45 GHz and 6.25 GHz by applying an analog tuning voltage between 0 V and 14 V.

This tunable filter can be used as a smaller alternative to physically large switched filter banks and cavity tuned filters.

The HMC892ALP5E has excellent microphonics due to the monolithic design and provides a dynamically adjustable solution in advanced communications applications.

REVISION HISTORY

9/2018—Revision 0: Initial Version

SPECIFICATIONS

T_A = 25°C, V_{FCTL} = V_{BWCTL}, unless otherwise noted.

Table 1.

Parameter	Min	Typ	Max	Unit	Test Conditions/Comments
FREQUENCY RANGE					
Center (f_{CENTER})	3.45		6.25	GHz	
BANDWIDTH					
3 dB		8.7		%	
3 dB Bandwidth Control, V_{BWCTL}		3		%	Percent change of bandwidth over f_{CENTER}, as V_{BWCTL} changes
REJECTION					
Low-Side		0.89 × f_{CENTER}		GHz	≥20 dB
High-Side		1.13 × f_{CENTER}		GHz	≥20 dB
Re-Entry		5.70 × f_{CENTER}		GHz	≤30 dB
LOSS					
Insertion		9.5		dB	
Return		9.6		dB	
DYNAMIC PERFORMANCE					
Maximum Input Power for Linear Operation			10	dBm	
Input Third-Order Intercept (IP3)		32		dBm	Input power (P_{IN}) = 20 dBm per tone
Group Delay		1.55		ns	
Phase Sensitivity		3.5		Radian/V	
Amplitude Settling		200		ns	Time to settle to minimum insertion loss, within ≤0.5 dB of static insertion loss
Drift Rate		0.5		MHz/°C	
RESIDUAL PHASE NOISE					
1 MHz Offset		−165		dBc/Hz	
TUNING					
Voltages (V_{FCTL}, V_{BWCTL})	0		14	V	Each pin can be driven independently
Currents (I_{FCTL}, I_{BWCTL})			±1	µA	Rated current for each pin

ABSOLUTE MAXIMUM RATINGS

Table 2.

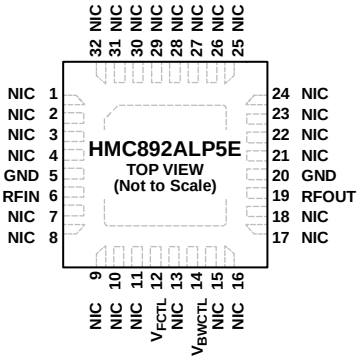
Parameter	Rating
Tuning	
Voltages (V_{FCTL}, V_{BWCTL})	−0.5 V to +15 V
Currents (I_{FCTL}, I_{BWCTL})	±1 mA
RF Input Power	27 dBm
Temperature	
Operating	−40°C to +85°C
Storage	−65°C to +150°C
Junction for 1,000,000 Mean Time to Failure (MTTF)	175°C
Nominal Junction (Paddle Temperature (T_{PADDLE}) = 85°C, P_{IN} = 10 dBm)	90°C
Electrostatic Discharge (ESD)Sensitivity Rating	
Human Body Model (HBM)	1500 V
Field Induced Charged Device Model (FICDM)	1250 V
Moisture Sensitivity Level (MSL) Rating	MSL3

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS



NOTES
1. NIC = NOT INTERNALLY CONNECTED. THESE PINS ARE NOT CONNECTED INTERNALLY. ALL DATA SHOW IN THIS DATA SHEET WAS MEASURED WITH THESE PINS CONNECTED TO RF OR DC GROUND EXTERNALLY.
2. EXPOSED PAD. THE PACKAGE BOTTOM HAS AN EXPOSED METAL PAD THAT MUST BE CONNECTED TO RF AND DC GROUND.

16963-002

Figure 2. Pin Configuration

Table 3. Pin Function Descriptions

Pin No.	Mnemonic	Description
1 to 4, 7 to 11, 13, 15 to 18, 21 to 32	NIC	Not Internally Connected. These pins are not connected internally. All data shown in this data sheet was measured with these pins connected to RF or dc ground externally.
5, 20	GND	Ground. These pins and exposed paddle must be connected to RF or dc ground. See Figure 5 for the interface schematic.
6	RFIN	Radio Frequency Input. This pin is dc-coupled and is matched to 50 Ω. Do not apply external voltage to this pin. See Figure 3 for the interface schematic.
12	V_{FCTL}	Center Frequency Control Voltage. See Figure 4 for the interface schematic.
14	V_{BWCTL}	Bandwidth Control Voltage. See Figure 7 for the interface schematic.
19	RFOUT	Radio Frequency Output. This pin is dc-coupled and is matched to 50 Ω. Do not apply external voltage to this pin. See Figure 6 for the interface schematic.
	EPAD	Exposed Pad. The package bottom has an exposed metal pad that must be connected to RF and dc ground.

THEORY OF OPERATION

The HMC892ALP5E is a tunable band-pass filter that features a user selectable pass-band frequency. Varying the applied analog tuning voltage between 0 V and 14 V at the V_{FCTL} pin varies the center frequency between 3.45 GHz and 6.25 GHz. The bandwidth of the filter is adjustable by using the V_{BWCTL} control voltage, which varies from 0 V to 14 V. Typical operation is to tie both V_{FCTL} and V_{BWCTL} control voltages together.

APPLICATIONS INFORMATION

TYPICAL APPLICATION CIRCUIT

Figure 26 shows the typical application circuit for the HMC892ALP5E. RFIN and RFOUT are dc-coupled and require external 100 pF series capacitors (C1 and C2).

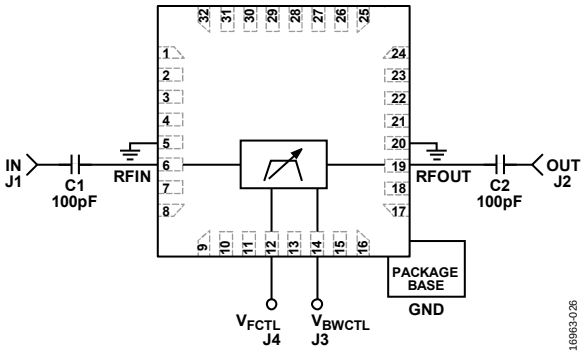

Figure 26. Typical Application Circuit

EVALUATION PCB INFORMATION

All RF traces are routed on Layer 1 (primary side), and all other layers are ground planes that provide a solid ground for RF transmission lines, as shown in Figure 27. The top dielectric material is Rogers 4350, offering low loss performance. The preimpregnated (PREPREG) material in Layer 2 sticks the Isola 370HR with copper trace layers above and below together. Both the PREPREG material and the Isola 370HR core layer are used to achieve required board finish thickness.

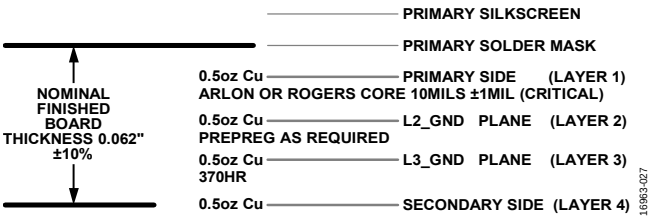

Figure 27. 4-Layer Stackup

The printed circuit board (PCB) used in the application uses radio frequency (RF) circuit design techniques. Signal lines must have a 50 Ω impedance while the package ground leads and exposed pad must be connected directly to the ground plane (see Figure 28). Use a sufficient number of via holes to connect the top and bottom ground planes. The evaluation PCB shown in Figure 28 is available from Analog Devices, Inc., upon request. The HMC890ALP5E evaluation board in Figure 28 is used to evaluate the HMC892ALP5E device.
