## 1 pC Charge Injection, 100 pA Leakage, +5 V / +3 V, Dual SPST Analog Switches

## DESCRIPTION

The DG9232E, DG9233E, and DG9234E are monolithic CMOS switches designed for precision signal switching. The $17 \Omega$ low voltage parts feature low charge injection, leakage, parasitic capacitance, and fast switching.
The DG9232E, DG9233E, and DG9234E can switch both analog and digital signals. Each switch conducts equally well in both directions when on, and blocks up to the power supply level when off.
The DG9232E, DG9233E, and DG9234E contain two independent single pole single throw (SPST) switches. Switch-1 and switch-2 are normally closed for the DG9232E and normally open for the DG9233E. For the DG9234E, switch-1 is normally open and switch-2 is normally closed with a break-before-make switching timing.
The DG9232E, DG9233E, and DG9234E offer 1 nW typical power consumption and 8 kV ESD/HBM, 1 kV ESD/CDM tolerance. They are the ideal switches for use in low voltage instruments and healthcare devices, fitting the circuits of low voltage ADC and DAC, sample and hold, analog front end gain control, and signal path control. The DG9232E, DG9233E, and DG9234E are available in 8-lead MSOP and SOIC packages.

## BENEFITS

- Low charge injection and leakage
- Low parasitic capacitance
- Fast switching speed
- High ESD tolerance

## FEATURES

- 1 pC charge injection
- Guaranteed 100 pA maximum switch on leakage at $25^{\circ} \mathrm{C}$
- 3.8 pF switch off and 7.8 pF switch on capacitances
- +2.7 V to +5 V single supply operation
- Low on-resistance - $\mathrm{R}_{\mathrm{DS}(o n)}$ : $17 \Omega$ / typ. at 5 V
- ton: $32 \mathrm{~ns}, \mathrm{t}_{\mathrm{OFF}}: 10 \mathrm{~ns}$ switching time
- Typical power consumption: 1 nW
- Over voltage tolerant TTL / CMOS compatible
- ESD (HBM): 8000 V, ESD (CDM): 1000 V
- Latch-up current: > 300 mA (JESD78)
- Available in MSOP-8 and SOIC-8
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

## Note

* This datasheet provides information about parts that are RoHS-compliant and / or parts that are non-RoHS-compliant. For example, parts with lead ( Pb ) terminations are not RoHS-compliant. Please see the information / tables in this datasheet for details.

## APPLICATIONS

- Automatic test equipment
- Process control and automation
- Data acquisition systems
- Meters and instruments
- Medical and healthcare systems
- Communication systems
- Sample-and-hold systems
- Relay replacements
- Battery powered systems

DG9232E, DG9233E, DG9234E
Vishay Siliconix

| Power dissipation (packages) ${ }^{\text {b }}$ | 8-pin narrow body SOIC ${ }^{\text {c }}$ | 400 | mW |

## Notes

a. Signals on NC, NO, or COM or IN exceeding V+ will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
b. All leads welded or soldered to PC board.
c. Derate $6.5 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $70^{\circ} \mathrm{C}$.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## Notes

a. Room $=25^{\circ} \mathrm{C}$, full $=$ as determined by the operating suffix.
b. Typical values are for design aid only, not guaranteed nor subject to production testing.
c. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this datasheet.
d. Guarantee by design, nor subjected to production test.
e. $\mathrm{V}_{\mathrm{IN}}=$ input voltage to perform proper function.
f. Difference of min. and max. values.
g. Guaranteed by 5 V leakage tests, not production tested.

## MSOP: 8-LEADS

JEDEC Part Number: MO-187, (Variation AA and BA)

NOTES:

1. Die thickness allowable is $0.203 \pm 0.0127$.
2. Dimensioning and tolerances per ANSI.Y14.5M-1994.
3. 

Dimensions " $D$ " and " $E_{1}$ " do not include mold flash or protrusions, and are measured at Datum plane $-\mathrm{H}^{-}$, mold flash or protrusions shall not exceed 0.15 mm per side.

Dimension is the length of terminal for soldering to a substrate
Terminal positions are shown for reference only.
Formed leads shall be planar with respect to one another within 0.10 mm at seating plane.

The lead width dimension does not include Dambar protrusion. Allowable Dambar protrusion shall be 0.08 mm total in excess of the lead width dimension at maximum material condition. Dambar cannot be located on the lower radius or the lead foot. Minimum space between protrusions and an adjacent lead to be 0.14 mm . See detail "B" and Section "C-C"

Section "C-C" to be determined at 0.10 mm to 0.25 mm from the lead tip.
9. Controlling dimension: millimeters
10. This part is compliant with JEDEC registration MO-187, variation AA and BA.
11. Datums -A- and -B - to be determined Datum plane $-\mathrm{H}-$

Exposed pad area in bottom side is the same as teh leadframe pad size.

Detail "B" (Scale: 30/1) Dambar Protrusion
