NOTES

- 1. Circled numbers refer to sensor termination.
- 2. $V_0 = V_2 V_4$ (referenced to pin 3).
- 3. $R_B = \text{Strain gage resistors} (\sim 4.8 \text{ k}\Omega).$
- 4. R_T = Sensitivity temperature compensation resistor.
- 5. R_s = Sensitivity calibration resistor.

When a positive pressure is applied to port P2, the differential voltage V2 - V4 (voltage at pin 2, with respect to ground, increases and voltage at pin 4 decreases) increases linearly with respect to the input pressure. When a vacuum pressure is pulled at port P2 (or positive pressure applied to port P1) the voltage $V_2 - V_4$ decreases linearly with respect to the input pressure.
