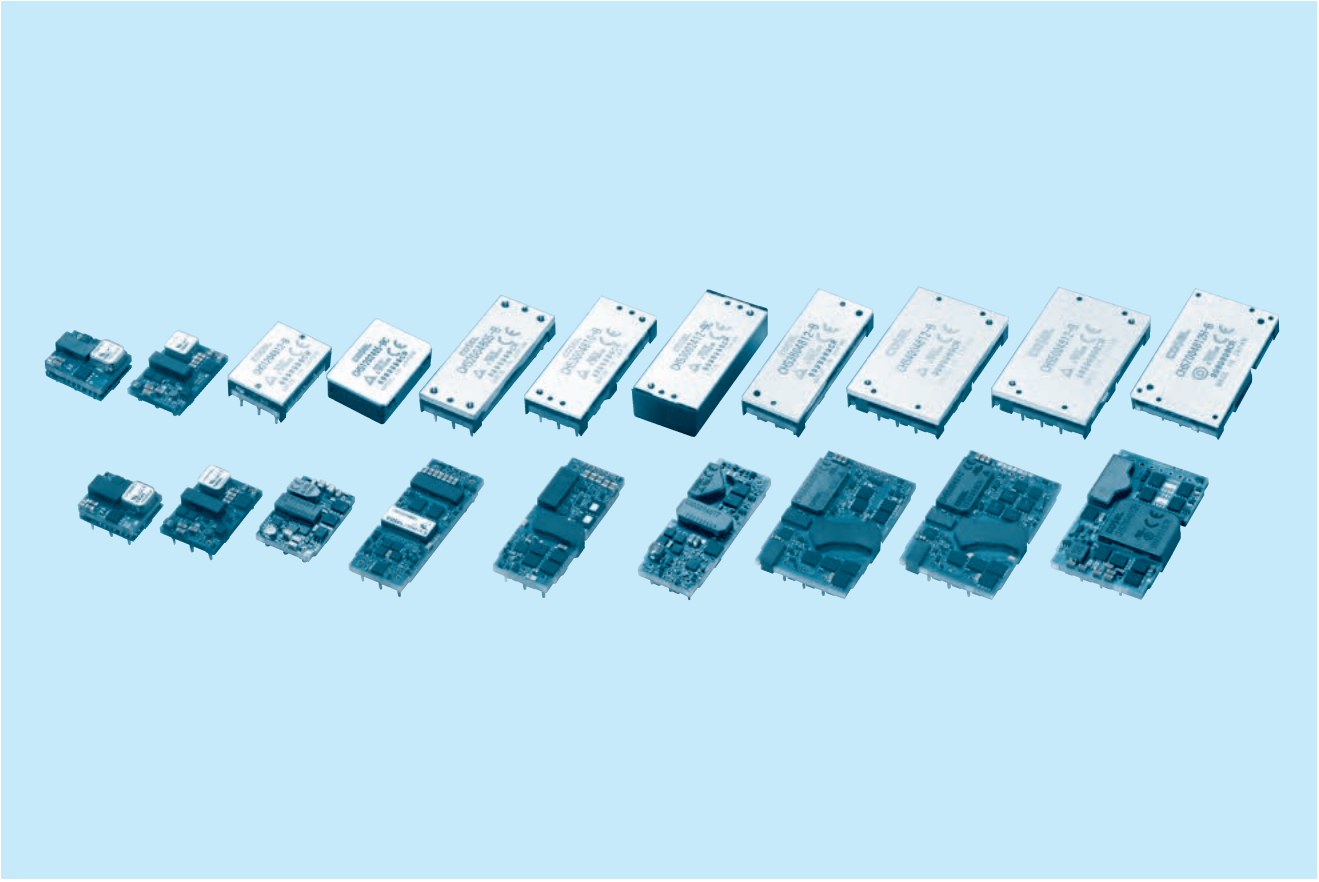
Low Profile | Isolated | Safety Approvals | OCP | OVP | Remote ON/OFF

CHS-series



Feature

High efficiency 96% (CHS7004812H)
Compact DC-DC Converter, "BRICK SIZE" which has been standard size for Telecommunication Market
High density
High reliability : not built-in aluminum and tantalum electrolytic capacitor
Built-in overcurrent, overvoltage and thermal protection circuits
Built-in remote ON/OFF

CE marking

Low Voltage Directive
RoHS Directive

Safety agency approvals

UL60950-1, C-UL, EN60950-1 (CHS60, CHS80, CHS120, CHS200, CHS300, CHS380, CHS400, CHS500)
UL62368-1, C-UL, EN62368-1 (CHS700)

5-year warranty

OTHERS	CASE SIZE/WEIGHT		19.05×12.7×23.36mm [0.75×0.5×0.92 inches] (W×H×D) / 15g max		
	COOLING METHOD		Convection / Forced air		

*1 At rated input (DC48V) and rated load. Ta=25℃, 2m/s.
*2 Ripple and ripple noise is measured by using measuring board with ceramic capacitor 22μF.
*3 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25℃, with the input voltage held constant at the rated input/output.
*4 Refer to the instruction manual for input voltage derating.

	IMPACT		196.1m/s² (20G), 11ms, once each along X, Y and Z axis
SAFETY	AGENCY APPROVALS		UL60950-1, C-UL (CSA60950-1), EN60950
OTHERS	CASE SIZE/WEIGHT		58.4×9.5×36.8mm [2.3×0.37×1.45 inches] (W×H×D) / 60g max
			58.9×12.7×37.3mm [2.32×0.5×1.47 inches] (W×H×D) / 90g max *5
	COOLING METHOD		Convection / Forced air / Conduction

*1 At rated input (DC48V) and rated load. Ta=25℃, 2m/s.
*2 Ripple and ripple noise is measured by using measuring board with ceramic capacitor 22μF.
*3 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25℃, with the input voltage held constant at the rated input/output.
*4 Refer to the instruction manual for input voltage derating.
*5 BasePlate Option.
*6 Parallel operation Option is not included.

Implementation・Mounting Method

Mounting method

■The unit can be mounted in any direction. When two or more power supplies are used side by side, position them with proper intervals to allow enough air ventilation. The temperature around each power supply should not exceed the temperature range shown in Instraction Maunal 8.

■Avoid placing the DC input line pattern layout underneath the unit.It will increase the line conducted noise. Make sure to leave an ample distance between the line pattern layout and the unit. Also avoid placing the DC output line pattern underneath the unit because it may increase the output noise. Lay out the pattern away from the unit.

■Avoid placing the signal line pattern layout underneath the unit because the power supply might become unstable. Lay out the pattern away from the unit.

■Avoid placing pattern layout in hatched area shown in below to insulate between pattern and power supply.

(g) CHS700

Dimensions in mm

Automatic Mounting（CHS series:option S）

■To mount CHS series automatically, use the inductor area near the output pin as an adsorption point. Please see the External View for details of the adsorption point. If the bottom dead point of a suction nozzle is too low when mounting excessive force is applied to the inductor, it could cause damage. Please mount carefully.

Implementation・Mounting Method

Soldering

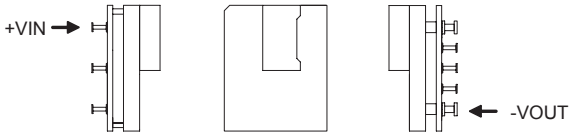
(1)Flow Soldering : 260℃ 15 seconds or less

(2)Soldering Iron : maximum 450℃ 5 seconds or less

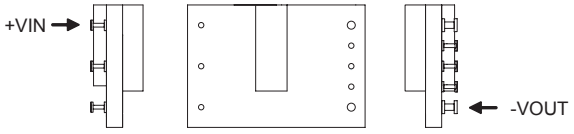
(3)Reflow Soldering (option "-S")

■Right figure shows conditions for the reflow soldering for option "-S" of CHS series. Please make sure that the temperatures of pin terminals +VIN and -VOUT shown in right figure do not exceed the temperatures shown in below.

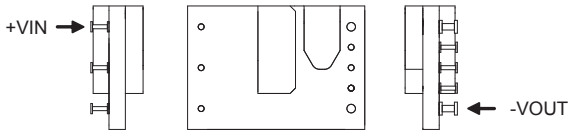
■If time or temperature of the reflow soldering goes beyond the conditions, reliability of internal components may be compromised.
Please use the unit under the recommended reflow conditions.



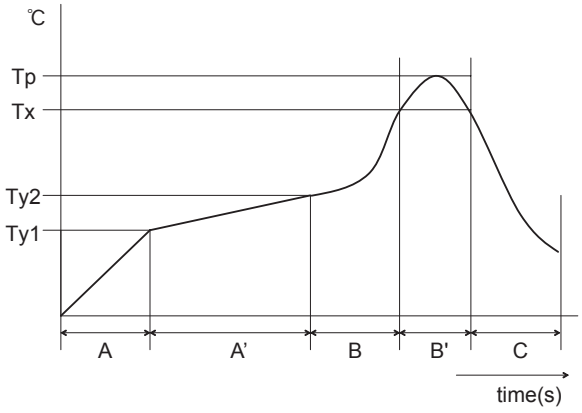
(a) CHS60



(b) CHS80



(c) CHS120



A	1.0 - 5.0℃/s
A'	Ty1:160±10℃ Ty2:180±10℃ Ty1 - Ty2:120s max
B	1.0 - 5.0℃/s
B'	Tp:Max245℃ 10s max Tx:220℃ or more:70s max
C	1.0 - 5.0℃/s

Notes to use option "-S"

■Solder iron or other similar methods are not recommended soldering method for option "-S"because it may not be able to retain connection reliability between the PCB and the Pins. Solder reflow is the acceptable mounting system for the option.

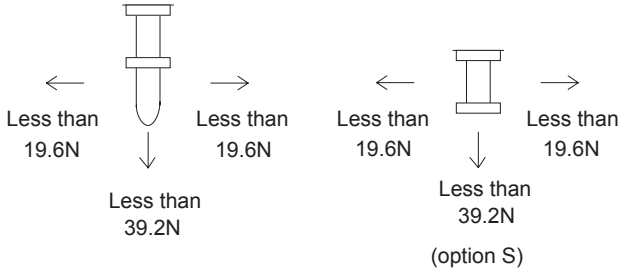
■Option "-S"is not reusable product after soldered on any application PCB.

Stress to the pins

■When too much stress is applied to the pins of the power supply, the internal connection may be weakened.
As shown in right figure, avoid applying stress of more than 19.6N (2kgf) to the pins horizontally and more than 39.2N (4kgf) vertically.

■The pins are soldered on PWB internally. Therefore, do not pull bend them with strong force.

■Fix the unit on PCB (using silicone rubber or fixing fittings) to reduce the stress to the pins.



■The base plate at Option"B"and "BC"is attached by glue.
When fixed to cabinet with screw, fix the power module before soldering the input and output pins to prevent the power modulebeing damaged.

Stress to the product

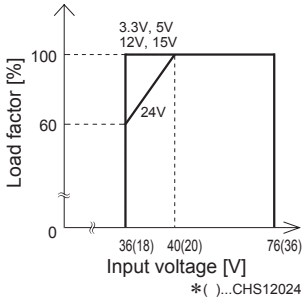
■CHS series transformer core and choke coil core are attached by glue.
There is a possibility that the core will be removed and power supply will be damaged when they receive stress by the fall or somekind of stress.

■The base plate at Option"B"and "BC"is attached by glue.There is a possibility that the base plate will be removed and power supply will be damaged when they receive stress by the fall or some kind of stress.

Derating

Input Derating

●CHS120 Input Derating



Ambient temperature derating

■Shown the thermal curve with measuring as shown in Instraction Maunal 8 Measuring method. Verify final design by actual temperature measurement. Make sure the temperatures at temperature measurement locations shown from Instraction Maunal 8. It should not exceed the derating curve in Instraction Maunal 8.
