TOSHIBA CMOS Linear Integrated Circuit Silicon Monolithic

TCR2LF series
TCR2LE series

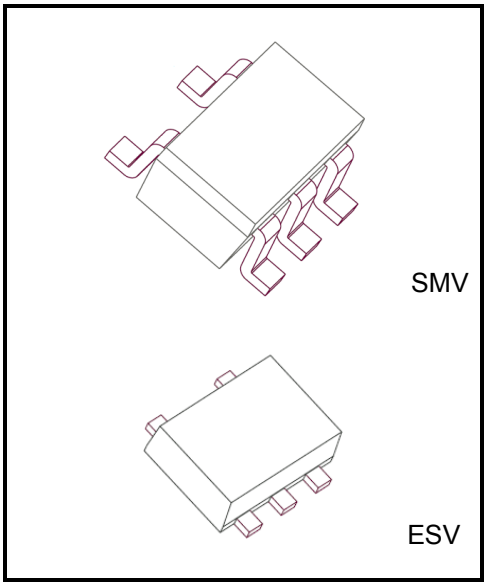
Ultra low quiescent current
200 mA CMOS Low Drop-Out Regulator in ultra small package

The TCR2LF and TCR2LE series are CMOS general-purpose single-output voltage regulators with an on/off control input, featuring ultra low quiescent bias current and low dropout voltage.

These voltage regulators are available in fixed output voltages between 0.8 V and 3.6 V and capable of driving up to 200 mA. They feature overcurrent protection and Auto-discharge function.

The package is general SMV(SOT-25) (2.8 mm x 2.9 mm x 1.1 mm) and ESV(SOT-553) (1.6 mm x 1.6 mm x 0.55 mm), and has a low dropout voltage of 270 mV (2.5 V output, IOUT = 150 mA).

As small ceramic input and output capacitors 0.1μF can be used with the TCR2LF and TCR2LE series, these devices are ideal for portable applications that require high-density board assembly such as cellular phones.



Weight :
SMV (SOT-25)(SC-74A) : 16.0 mg (typ.)
ESV (SOT-553) : 3.0 mg (typ.)

Features

- Low quiescent bias current (I_B = 2 μA (max) at I_{OUT} = 0 mA, T_j = -40 to 85°C)
- Low Drop-Out voltage
  V_{IN}-V_{OUT} = 270 mV (typ.) at 2.5 V-output, I_{OUT} = 150 mA
- Wide range output voltage line up (V_{OUT} = 0.8 to 3.6 V)
- High V_{OUT} accuracy ±1.0% (1.8V ≤ V_{OUT})
- Overcurrent protection
- Auto-discharge
- Pull down connection between CONTROL and GND
- Ceramic capacitors can be used (C_{IN} = 0.1 μF, C_{OUT} =0.1 μF)
- General package SMV(SOT-25) (2.8 mm x 2.9 mm x 1.1 mm) and ESV(SOT-553) (1.6 mm x 1.6 mm x 0.55 mm)

Note: Using continuously under heavy loads (e.g. the application of high temperature/current/voltage and the significant change in temperature, etc.) may cause this product to decrease in the reliability significantly even if the operating conditions (i.e. operating temperature/current/voltage, etc.) are within the absolute maximum ratings and the operating ranges.
Please design the appropriate reliability upon reviewing the Toshiba Semiconductor Reliability Handbook (“Handling Precautions”/“Derating Concept and Methods”) and individual reliability data (i.e. reliability test report and estimated failure rate, etc).

Attention in Use

- Output Capacitors
  Ceramic capacitors can be used for these devices. However, because of the type of the capacitors, there might be unexpected thermal features. Please consider application condition for selecting capacitors. And Toshiba recommend the ESR of ceramic capacitor is under 10 Ω.

- Mounting
  The long distance between IC and output capacitor might affect phase assurance by impedance in wire and inductor. For stable power supply, output capacitor need to mount near IC as much as possible. Also VIN and GND pattern need to be large and make the wire impedance small as possible.

- Permissible Loss
  Please have enough design patterns for expected maximum permissible loss. And under consideration of surrounding temperature, input voltage, and output current etc, we recommend proper dissipation ratings for maximum permissible loss; in general maximum dissipation rating is 70 to 80 percent.

- Overcurrent Protection Circuit
  Overcurrent protection circuit is designed in these products, but this does not assure for the suppression of uprising device operation. If output pins and GND pins are shorted out, these products might be break down.
  In use of these products, please read through and understand dissipation idea for absolute maximum ratings from the above mention or our ‘Semiconductor Reliability Handbook’. Then use these products under absolute maximum ratings in any condition. Furthermore, Toshiba recommend inserting failsafe system into the design.
