## Thick Film SMD Resistors, 0402, Reel

## FEATURES:

Small size and lightweight
Suitable for both flow and re-flow soldering
Matching with placement machines

## SPECIFICATION:

| Housing type | 0402 |
| :--- | :--- |
| Rated output | 0.0625 W |
| Resistor type | Thick film |
| Rated voltage | 50 V |
| Temperature range | $-55 \ldots+155^{\circ} \mathrm{C}$ |
| Dimensions $\mathrm{L} \times \mathrm{W} \times \mathrm{H}$ | $1.0 \times 0.5 \times 0.35 \mathrm{~mm}$ |

| Art. Nr. | Resistance | Tolerance | Temperature coefficient |

### 3.0 Structure:

### 4.0 Marking:

(1) For 0201 and 0402 size. Due to the very small size of the resistor's body, there is no marking on the body.
Example:

(2) $\pm 2 \%, \pm 5 \%$ Tolerance:The first two digits are significant figures of resistance and the third denotes number of zeros following
Example:

$333 \rightarrow 33 \mathrm{~K} \Omega$
(3) $\pm 2 \%, \pm 5 \%$ Tolerance: Below $10 \Omega$ show as following, read alphabet"R" as decimal point. Example:

$2 R 2 \rightarrow 2.2 \Omega$
(4) $\pm 0.5 \%, \pm 1 \%$ Tolerance: 4 digits, first three digits are significant; forth digit is number of zeros. Letter $r$ is decimal point.

(5) standard E-24 and not belong to E-96 series values(in $\pm 0.5 \%$, $\pm 1 \%$ tolerance) of 0603 size the marking is the same as $5 \%$ tolerance but marking as underline

(6) Product below $1 \Omega$,show as following, the first digit is " $R$ " which as decimal point.
$R 300 \rightarrow 0.3 \Omega$
(7) Standard E-96 series values ( $\pm 0.5 \%, ~ \pm 1 \%$ tolerance) of 0603 size. Due the small size of the resistor's body, 3 digits marking will be used to indicate the accurate resistance value by using the following multiplier \& resistance code.

Multiplier code:

| Code | A | B | C | D | E | F | G | H | X | Y | Z |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Multiplier | $10^{0}$ | $10^{1}$ | $10^{2}$ | $10^{3}$ | $10^{4}$ | $10^{5}$ | $10^{6}$ | $10^{7}$ | $10^{-1}$ | $10^{-2}$ | $10^{-3}$ |

Coding formula
First two digits $\qquad$ -Resistance code

Third digit -Multiplier code

| 174 | 24 | 309 | 48 | 549 | 72 | 976 | 96 |

(8) $0 \Omega$ Marking:

Normally for 0201 and 0402 size, no marking on the body:

Normally, the making of $0 \Omega 0603,0 \Omega 0805,0 \Omega 1206,0 \Omega 1210,0 \Omega 1812,0 \Omega 2010,0 \Omega 2512$ resistors as following

### 5.0 Derating Curve:

Resistors shall have a power rating based on continuous load operation at an ambient temperature from $-55{ }^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$. For temperature in excess of $70^{\circ} \mathrm{C}$, the load shall be derate as shown in figure 1

Figure 1

5.1 Voltage rating:

Resistors shall have a rated direct-current (DC) continuous working
Voltage or an approximate sine-wave root-mean-square (RMS) alternating-current (AC) continuous working voltage at commercial-line frequency and waveform corresponding to the power rating, as determined from the following formula:

$$
R C W V=\sqrt{P \times R}
$$

Where: RCWV commercial-line frequency and waveform (Volt.)

$$
P=\text { power rating (WATT.) } \quad R=\text { nominal resistance }(O H M)
$$

In no case shall the rated DC or RMS AC continuous working voltage be greater than the applicable maximum value.

The overload voltage is 2.5 times RCWV or Max. Overload voltage whichever is less.

### 6.0 Performance Specification:

The standard Part No. includes 14 digits with the following explanation:
$7.11^{\text {st }} \sim 4^{\text {th }}$ digits
This is to indicate the Chip Resistor.
Example: 0201, 0402,0603,0805,1206,1210,2010,1812,2512
7.2 5th~6th digits:
7.2.1 This is to indicate the wattage or power rating. To dieting the size and the numbers, The following codes are used; and please refer to the following chart for detail:
W=Normal Size; S=Small Size; U= Ultra Small Size; "1" ~ "G" to denotes "1" ~"16" as Hexadecimal:
1/16W~1W:

| Wattage | $1 / 32$ | $3 / 4 \mathrm{~W}$ | $1 / 2$ | $1 / 3$ | $1 / 4$ | $1 / 8$ | $1 / 10$ | $1 / 16$ | $1 / 20 \mathrm{~W}$ | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Normal Size | WH | 07 | W 2 | W 3 | W 4 | W 8 | WA | WG | WM | 1 W |
| Small Size | $/$ | 07 | S 2 | S 3 | S 4 | S 8 | SA | SG | $/$ | 1 S |

7.2.2 For power rating less or equal to 1 watt, the 5 th digit will be the letters $W$ or $S$ to represent the size required \& the 6th digit will be a number or a letter code.

Example: WA=1/10W; S4=1/4W-S
7.3 The 7th digit is to denote the Resistance Tolerance. The following letter code is to be used for indicating the standard Resistance Tolerance.

$$
D= \pm 0.5 \% \quad F= \pm 1 \% \quad G= \pm 2 \% \quad J= \pm 5 \% \quad K= \pm 10 \%
$$

7.4 The 8th to 11th digits is to denote the Resistance Value.
7.4.1 For the standard resistance values of $5 \% \& 10 \%$ series, the 8 th digit is " 0 " ,the 9 th \& 10 th digits are to denote the significant figures of the resistance and the 11th digit is the number of zeros following;

For the standard resistance values of $\leq 2 \%$ series in, the 8th digit to the 10th digits is to denote the significant figures of the resistance and the 11th digit is the zeros following.
7.4.2 The following number s and the letter codes are to be used to indicate the number of zeros in the 11th digit:

$$
0=10^{0} \quad 1=10^{1} \quad 2=10^{2} \quad 3=10^{3} \quad 4=10^{4} \quad 5=10^{5} \quad 6=10^{6} \quad \mathrm{~J}=10^{-1} \quad \mathrm{~K}=10^{-2} \quad \mathrm{~L}=10^{-3} \quad \mathrm{M}=10^{-4}
$$

7.4.3 The 12th, 13 th \& 14 th digits.

The 12th digit is to denote the Packaging Type with the following codes:
C=Bulk in (Chip Product) T=Tape/Reel
7.4.4 The 13th digit is normally to indicate the Packing Quantity of Tape/Reel packaging types. The following letter code is to be used for some packing quantities:

$$
4=4000 \text { pcs } 5=5000 \text { pcs } C=10000 \mathrm{pcs} \quad D=20000 \text { pcs } \quad E=15000 \text { pcs }
$$

Chip Product: BD=B/B-20000pcs TC=T/R-10000pcs
7.4.5 For some items, the 14th digit alone can use to denote special features of additional information with the following codes:
E= For "Environmental Protection, Lead Free type".
S= Provided Specially.
8.0 Ordering Procedure: (Example: RND155 0805 1/8W $\pm 5 \% 470 \mathrm{~K} \Omega$ T/R-5000)

Packing Type:
T=Tape/Reel

## Resistance Value:

 5\% series:The 1st digit will be " 0 "; the $2^{\text {nd }} \& 3^{\text {rd }}$ digits are for the significant figures of the resistance and the $4^{\text {th }}$ digit indicate the numbers of zeros following.
$0.5 \%$, $1 \%$, $2 \%$ series: The 1 st to $3^{\text {rd }}$ digits are for the significant figures of the resistance and 4th digit denotes number of zeros following. $\mathrm{J}=10^{-1} ; \mathrm{K}=10^{-2} ; \mathrm{L}=10^{-3}$

Packing quantity:
1=1000PCS
2=2000PCS
3=3000PCS
4=4000PCS
5=5000PCS
C=10000PCS
D=20000PCS
The amount of packaging product type, please refer to 9.3

Special Feature:
E= Lead Free
$S=$ Provided Specially

### 9.0 Packaging:

| 0201 | Paper | $10,000 \mathrm{pcs}$ | 2.0 | 13.0 | 21.0 | 60.0 | 178.0 | 10.0 |
| 0402 | Paper | $10,000 \mathrm{pcs}$ | 2.0 | 13.0 | 21.0 | 60.0 | 178.0 | 10.0 |
| 0603 | Paper | $5,000 \mathrm{pcs}$ | 2.0 | 13.0 | 21.0 | 60.0 | 178.0 | 10.0 |
| 0805 | Paper | $5,000 \mathrm{pcs}$ | 2.0 | 13.0 | 21.0 | 60.0 | 178.0 | 10.0 |
| 1206 | Paper | $5,000 \mathrm{pcs}$ | 2.0 | 13.0 | 21.0 | 60.0 | 178.0 | 10.0 |
| 1210 | Paper | $5,000 \mathrm{pcs}$ | 2.0 | 13.0 | 21.0 | 60.0 | 178.0 | 10.0 |
| 2010 | Paper or Embossed | $4,000 \mathrm{pcs}$ | 2.0 | 13.0 | 21.0 | 60.0 | 178.0 | 13.8 |
| 1812 | Embossed | $4,000 \mathrm{pcs}$ | 2.0 | 13.0 | 21.0 | 60.0 | 178.0 | 13.8 |
| 2512 | Embossed | $4,000 \mathrm{pcs}$ | 2.0 | 13.0 | 21.0 | 60.0 | 178.0 | 13.8 |

10.1 Environment Related Substance.

This product complies to EU RoHS directive, EU PAHs directive, EU PFOS directive and Halogen free.
10.2 Ozone layer depleting substances.

Ozone depleting substances are not used in our manufacturing process of this product. This product is not manufactured using Chloro fluorocarbons (CFCs), Hydrochlorofluorocarbons (HCFCs), Hydrobromofluorocarbons (HBFCs) or other ozone depleting substances in any phase of the manufacturing process.
10.3 Storage Condition

The performance of these products, including the solderability, is guaranteed for a year from the date of arrival at your company, provided that they remain packed as they were when delivered and stored at a temperature of $5^{\circ} \mathrm{C} \sim 35^{\circ} \mathrm{C}$ and a relative humidity of $25 \% \sim 75 \% \mathrm{RH}$.

Even within the above guarantee periods, do not store these products in the following conditions.Otherwise, their electrical performance and/or solderability may be deteriorated, and the packaging materials (e.g. taping materials) may be deformed or deteriorated, resulting in mounting failures.

1. In salty air or in air with a high concentration of corrosive gas, such as $\mathrm{Cl} 2, \mathrm{H} 2 \mathrm{~S}, \mathrm{NH} 3, \mathrm{SO}$, or NO2.
2. In direct sunlight.
10.4 The products are used in circuit board thickness greater than 1.6 mm . If customers use less than the thickness of the circuit board that you should confirm with the company, in order to recommend a more suitable product.
