## 2 Introduction

During export of a product from one country or trade zone to another country or trade zone the product must be classified. One purpose for the classification is for the customs office to calculate duty rates for the product. Another purpose for the classification is for trade limitations that might exist because of different regulations.

This document contains a list with classifications of some of Embedded Artists products. The classifications are based on unmodified products as delivered by Embedded Artists.

**Note:** Embedded Artists makes no representation or warranty as to the accuracy or reliability of the classifications in this document. Any entity exporting or importing an Embedded Artists product is responsible for ensuring the accuracy of the classification and must comply with any export regulations in your country.

### 2.1 Dual-use

Dual-use items are products that can be used both for civilian and military purposes. These kinds of items usually have some kind of restriction when it comes to export and might require an export license.

### 2.2 Export Control Classification Number (ECCN)

An ECCN is an alphanumeric code used on the Commerce Control List (CCL) to identify dual-use items for export control purposes. ECCNs are issued by the United States Department of Commerce, Bureau of Industry and Security (BIS).

### 2.3 Harmonized System (HS)

HS is an internationally standardized system of numbers to classify traded products. The numbers are frequently used by customs authorities to determine duty and tax rates when products are exported and imported.
