Infineon continues to support existing part numbers. Please continue to use the ordering part numbers listed in the datasheet for ordering.

## General Description

The CYBLE-212020-01 is a fully certified and qualified module supporting Bluetooth® Low Energy 5.1 wireless communication. The CYBLE-212020-01 is a turnkey solution and includes onboard crystal oscillators, trace antenna, passive components, and the Cypress PSoC 4 Bluetooth LE. Refer to the PSoC 4 Bluetooth LE [datasheet](#) for additional details on the capabilities of the PSoC 4 Bluetooth LE device used on this module.

The CYBLE-212020-01 supports a number of peripheral functions (ADC, timers, counters, PWM) and serial communication protocols (I<sup>2</sup>C, UART, SPI) through its programmable architecture. The CYBLE-212020-01 includes a royalty-free Bluetooth LE stack compatible with Bluetooth 5.1 and provides up to 23 GPIOs in a 14.52 × 19.20 × 2.00 mm package.

The CYBLE-212020-01 is drop-in compatible with the CYBLE-012011-00 (128KB BT 5.1) and CYBLE-212019-00 (256KB BT 4.1) EZ-BLE Creator® Modules.

The CYBLE-212020-01 is a complete solution targeted at applications requiring cost-optimized Bluetooth LE wireless connectivity.

## Module Description

- Module size: 14.52 mm × 19.20 mm × 2.00 mm (with shield)
- Castelated solder pad connections for ease-of-use
- 256-KB flash memory, 32-KB SRAM memory
- Up to 23 GPIOs configurable as open drain high/low, pull-up/pull-down, HI-Z analog, HI-Z digital, or strong output
- Bluetooth 5.1 single-mode module
  - QDID: [167531](#)
  - Declaration ID: [D054767](#)
- Certified to FCC, ISED, MIC, KC, and CE regulations
- Industrial temperature range: -40 °C to +85 °C
- 32-bit processor (0.9 DMIPS/MHz) with single-cycle 32-bit multiply, operating at up to 48 MHz
- Watchdog timer with dedicated internal low-speed oscillator (ILO)
- Two-pin SWD for programming

## Power Consumption

- TX output power: -18 dbm to +3 dbm
- Received signal strength indicator (RSSI) with 1-dB resolution
- TX current consumption of 15.6 mA (radio only, 0 dbm)

- RX current consumption of 16.4 mA (radio only)
- Low power mode support
  - Deep Sleep: 1.3 µA with watch crystal oscillator (WCO) on
  - Hibernate: 150 nA with SRAM retention
  - Stop: 60 nA with GPIO (P2.2) or XRES wakeup

## Functional Capabilities

- Up to 22 capacitive sensors for buttons or sliders with best-in-class signal-to-noise ration (SNR) and liquid tolerance
- 12-bit, 1-Msps SAR ADC with internal reference, sample-and-hold (S/H), and channel sequencer
- Two serial communication blocks (SCBs) supporting I<sup>2</sup>C (master/slave), SPI (master/slave), or UART
- Four dedicated 16-bit timer, counter, or PWM (TCPWM) blocks
- LCD drive supported on all GPIOs (common or segment)
- Programmable low-voltage detect (LVD) from 1.8 V to 4.5 V
- I<sup>2</sup>S master interface
- Bluetooth LE protocol stack supporting generic access profile (GAP) Central, Peripheral, Observer, or Broadcaster roles
- Switches between Central and Peripheral roles on-the-go
- Standard Bluetooth LE profiles and services for interoperability
- Custom profile and service for specific use cases

## Benefits

The CYBLE-212020-01 module is provided as a turnkey solution, including all necessary hardware required to use Bluetooth LE communication standards.

- Proven hardware design that is ready for use
- Cost-optimized for applications without space constraint
- Reprogrammable architecture
- Fully certified module eliminates the time needed for design, development and certification processes
- Bluetooth SIG qualified with QDID and Declaration ID
- Flexible communication protocol support
- PSoC Creator™ provides an easy-to-use integrated design environment (IDE) to configure, develop, program, and test a Bluetooth LE application

## Two Easy-To-Use Design Environments to Get You Started Quickly

### PSoC® Creator™ Integrated Design Environment (IDE)

[PSoC Creator](#) is an Integrated Design Environment (IDE) that enables concurrent hardware and firmware editing, compiling and debugging of PSoC 3, PSoC 4, PSoC 5LP, PSoC 4 Bluetooth LE, and EZ-BLE module systems with no code size limitations. PSoC peripherals are designed using schematic capture and simple graphical user interface (GUI) with over 120 pre-verified, production-ready PSoC Components™.

PSoC Components are analog and digital “virtual chips,” represented by an icon that users can drag-and-drop into a design and configure to suit a broad array of application requirements.

#### *Bluetooth Low Energy Component*

The [Bluetooth Low Energy Component](#) inside PSoC Creator provides a comprehensive GUI-based configuration window that lets you quickly design Bluetooth LE applications. The Component incorporates a Bluetooth Core Specification v5.1 compliant Bluetooth LE protocol stack and provides API functions to enable user applications to interface with the underlying Bluetooth Low Energy Sub-System (BLESS) hardware via the stack.

### EZ-Serial™ Bluetooth LE Firmware Platform

The [EZ-Serial Firmware Platform](#) provides a simple way to access the most common hardware and communication features needed in Bluetooth LE applications. EZ-Serial implements an intuitive API protocol over the UART interface and exposes various status and control signals through the module’s GPIOs, making it easy to add Bluetooth LE functionality quickly to existing designs.

Use a simple serial terminal and evaluation kit to begin development without requiring an IDE. Refer to the EZ-Serial web page for User Manuals and instructions for getting started as well as detailed reference materials.

EZ-BLE modules are pre-flashed with the EZ-Serial Firmware Platform. If you do not have EZ-Serial pre-loaded on your module, you can download each EZ-BLE module’s firmware images on the [EZ-Serial web page](#).

## Overview

### Module Description

The CYBLE-212020-01 module is a complete module designed to be soldered to the applications main board.

#### *Module Dimensions and Drawing*

Cypress reserves the right to select components (including the appropriate Bluetooth LE device) from various vendors to achieve the Bluetooth LE module functionality. Such selections will still guarantee that all height restrictions of the component area are maintained. Designs should be held within the physical dimensions shown in the mechanical drawings in [Figure 1](#). All dimensions are in millimeters (mm).

**Table 1. Module Design Dimensions**

Dimension Item		Specification
Module dimensions	Length (X)	14.52 ± 0.15 mm
	Width (Y)	19.20 ± 0.15 mm
Antenna location dimensions	Length (X)	11.00 ± 0.15 mm
	Width (Y)	5.00 ± 0.15 mm
PCB thickness	Height (H)	0.80 ± 0.10 mm
Shield height	Height (H)	1.20 ± 0.10 mm
Maximum component height	Height (H)	1.20-mm typical (shield)
Total module thickness (bottom of module to highest component)	Height (H)	2.00-mm typical

See [Figure 1](#) on page 6 for the mechanical reference drawing for CYBLE-212020-01.

**Figure 1. Module Mechanical Drawing**

**Note**

1. No metal should be located beneath or above the antenna area. Only bare PCB material should be located beneath the antenna area. For more information on recommended host PCB layout, see [Figure 3](#), [Figure 4](#), [Figure 5](#), and [Figure 6](#) and [Table 3](#).

### Pad Connection Interface

As shown in the bottom view of [Figure 1](#) on page 6, the CYBLE-212020-01 connects to the host board via solder pads on the back side of the module. [Table 2](#) and [Figure 2](#) detail the solder pad length, width, and pitch dimensions of the CYBLE-212020-01 module.

**Table 2. Solder Pad Connection Description**

Name	Connections	Connection Type	Pad Length Dimension	Pad Width Dimension	Pad Pitch
SP	31	Solder Pads	1.02 mm	0.71 mm	1.27 mm

**Figure 2. Solder Pad Dimensions (Seen from Bottom)**

To maximize RF performance, the host layout should follow these recommendations:

1. The ideal placement of the Cypress Bluetooth LE module is in a corner of the host board with the trace antenna located at the far corner. This placement minimizes the additional recommended keep-out area stated in item 2. Refer to [AN96841](#) for module placement best practices.
2. To maximize RF performance, the area immediately around the Cypress Bluetooth LE module trace antenna should contain an additional keep-out area, where no grounding or signal trace are contained. The keep-out area applies to all layers of the host board. The recommended dimensions of the host PCB keep-out area are shown in [Figure 3](#) (dimensions are in mm).

**Figure 3. Recommended Host PCB Keep-Out Area Around the CYBLE-212020-01 Antenna**

1. FOR BEST RF PERFORMANCE, ADDITIONAL KEEPOUT IN BLUE HATCHED AREA ON THE HOST BOARD ON ALL LAYERS.
2. RECOMMENDATION IS TO PLACE THE BLE MODULE IN THE CORNER OF THE HOST BOARD WITH THE ANTENNA AT THE EDGE OF THE HOST BOARD.

**Host PCB Keep-Out Area Around Trace Antenna**

Table 3 provides the center location for each solder pad on the CYBLE-212020-01. All dimensions are referenced to the center of the solder pad. Refer to Figure 6 for the location of each module solder pad.

### Notes

- If the I<sup>2</sup>S feature is used in the design, the I<sup>2</sup>S pins shall be dynamically routed to the appropriate available GPIO by PSoC Creator.
- TCPWM: Timer, Counter, and Pulse Width Modulator. If supported, the pad can be configured to any of these peripheral functions
- TCPWM connections on ports 0, 1, 2, and 3 can be routed through the Digital Signal Interconnect (DSI) to any of the TCPWM blocks and can be either positive or negative polarity. TCPWM connections on ports 4 and 5 are direct and can only be used with the specified TCPWM block and polarity specified above.
- When using the capacitive sensing functionality, Pad 2 (P4.0) must be connected to a C<sub>MOD</sub> capacitor (located off of Cypress Bluetooth LE Module). The value of this capacitor is 2.2 nF and should be placed as close to the module as possible.
- The main board needs to connect all GND connections (Pad 25/26/27/28) on the module to the common ground of the system.

## Power Supply Connections and Recommended External Components

### Power Connections

The CYBLE-212020-01 contains two power supply connections, VDD and VDDR. The VDD connection supplies power for both digital and analog device operation. The VDDR connection supplies power for the device radio.

VDD accepts a supply range of 1.71 V to 5.5 V. VDDR accepts a supply range of 1.9 V to 5.5 V. These specifications are listed in Table 9. The maximum power supply ripple for both power connections on the module is 100 mV, as shown in Table 7.

The power supply ramp rate of VDD must be equal to or greater than that of VDDR.

### Connection Options

Two connection options are available for any application:

1. Single supply: Connect VDD and VDDR to the same supply.
2. Independent supply: Power VDD and VDDR separately.

### External Component Recommendation

In either connection scenario, it is recommended to place an external ferrite bead between the supply and the module connection. The ferrite bead should be positioned as close as possible to the module pin connection.

Figure 7 details the recommended host schematic options for a single supply scenario. The use of one or two ferrite beads will depend on the specific application and configuration of the CYBLE-212020-01.

Figure 8 details the recommended host schematic for an independent supply scenario.

The recommended ferrite bead value is 330 Ω, 100 MHz. (Murata BLM21PG331SN1D).

Figure 7. Recommended Host Schematic Options for a Single Supply Option

The CYBLE-212020-01 schematic is shown in Figure 9.

### Note

9. It can take as much as 20 ms to write to flash. During this time, the device should not be reset, or flash operations will be interrupted and cannot be relied on to have completed. Reset sources include the XRES pin, software resets, CPU lockup states and privilege violations, improper power supply levels, and watchdogs. Make certain that these are not inadvertently activated.

## Environmental Specifications

### Environmental Compliance

This Cypress Bluetooth LE module is built in compliance with the Restriction of Hazardous Substances (RoHS) and Halogen Free (HF) directives. The Cypress module and components used to produce this module are RoHS and HF compliant.

### RF Certification

The CYBLE-212020-01 module will be certified under the following RF certification standards at production release.

- FCC: WAP2011
- CE
- IC: 7922A-2011
- MIC: 203-JN0509
- KC: MSIP-CRM-Cyp-2011

### Safety Certification

The CYBLE-212020-01 module complies with the following regulations:

- Underwriters Laboratories, Inc. (UL) - Filing E331901
- CSA
- TUV

### Environmental Conditions

Table 51 describes the operating and storage conditions for the Cypress Bluetooth LE module.

**Table 51. Environmental Conditions for CYBLE-212020-01**

Description	Minimum Specification	Maximum Specification
Operating temperature	-40 °C	85 °C
Operating humidity (relative, non-condensation)	5%	85%
Thermal ramp rate	-	3 °C/minute
Storage temperature	-40 °C	85 °C
Storage temperature and humidity	-	85 °C at 85%
ESD: Module integrated into system Components <sup>[10]</sup>	-	15 kV Air 2.2 kV Contact

### ESD and EMI Protection

Exposed components require special attention to ESD and electromagnetic interference (EMI).

A grounded conductive layer inside the device enclosure is suggested for EMI and ESD performance. Any openings in the enclosure near the module should be surrounded by a grounded conductive layer to provide ESD protection and a low-impedance path to ground.

**Device Handling:** Proper ESD protocol must be followed in manufacturing to ensure component reliability.

**Note**

10. This does not apply to the RF pins (ANT, XTALI, and XTALO). RF pins (ANT, XTALI, and XTALO) are tested for 500-V HBM.

## Regulatory Information

### FCC

#### FCC NOTICE:

The device CYBLE-212020-01 complies with Part 15 of the FCC Rules. The device meets the requirements for modular transmitter approval as detailed in FCC public Notice DA00-1407.

Transmitter operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

#### CAUTION:

The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Cypress Semiconductor may void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help

#### LABELING REQUIREMENTS:

The Original Equipment Manufacturer (OEM) must ensure that FCC labelling requirements are met. This includes a clearly visible label on the outside of the OEM enclosure specifying the appropriate Cypress Semiconductor FCC identifier for this product as well as the FCC Notice above. The FCC identifier is FCC ID: WAP2011.

In any case the end product must be labeled exterior with "Contains FCC ID: WAP2011"

#### ANTENNA WARNING:

This device is tested with a standard SMA connector and with the antennas listed below. When integrated in the OEMs product, these fixed antennas require installation preventing end-users from replacing them with non-approved antennas. Any antenna not in the following table must be tested to comply with FCC Section 15.203 for unique antenna connectors and Section 15.247 for emissions.

#### RF EXPOSURE:

To comply with FCC RF Exposure requirements, the Original Equipment Manufacturer (OEM) must ensure to install the approved antenna in the previous.

The preceding statement must be included as a CAUTION statement in manuals, for products operating with the approved antennas in [Table 6](#) on page 14, to alert users on FCC RF Exposure compliance. Any notification to the end user of installation or removal instructions about the integrated radio module is not allowed.

The radiated output power of CYBLE-212020-01 with the trace antenna is far below the FCC radio frequency exposure limits. Nevertheless, use CYBLE-212020-01 in such a manner that it minimizes the potential for human contact during normal operation.

End users may not be provided with the module installation instructions. OEM integrators and end users must be provided with transmitter operating conditions for satisfying RF exposure compliance.

## ISED

### Innovation, Science and Economic Development Canada (ISED) Certification

CYBLE-212020-01 is licensed to meet the regulatory requirements of Innovation, Science and Economic Development Canada (ISED).

License: IC: 7922A-2011

Manufacturers of mobile, fixed, or portable devices incorporating this module are advised to clarify any regulatory questions and ensure compliance for SAR and/or RF exposure limits. Users can obtain Canadian information on RF exposure and compliance from [www.ic.gc.ca](http://www.ic.gc.ca).

This device has been designed to operate with the antennas listed in [Table 6](#) on page 14, having a maximum gain of 0.5 dBi. Antennas not included in this list or having a gain greater than 0.5 dBi are strictly prohibited for use with this device. The required antenna impedance is 50 ohms. The antenna used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

### ISED NOTICE:

The device CYBLE-212020-01 including the built-in trace antenna complies with Canada RSS-GEN Rules. The device meets the requirements for modular transmitter approval as detailed in RSS-GEN.

Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

### ISED RADIATION EXPOSURE STATEMENT FOR CANADA

This device complies with Innovation, Science and Economic Development (ISED) Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Cet appareil est conforme à la norme sur l'innovation, la science et le développement économique (ISED) norme RSS exempte de licence. L'exploitation est autorisée aux deux conditions suivantes: (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

### LABELING REQUIREMENTS:

The Original Equipment Manufacturer (OEM) must ensure that ISED labelling requirements are met. This includes a clearly visible label on the outside of the OEM enclosure specifying the appropriate Cypress Semiconductor IC identifier for this product as well as the ISED Notice above. The IC identifier is 7922A-2011. In any case, the end product must be labeled in its exterior with "Contains IC: 7922A-2011"

### European R&TTE Declaration of Conformity

Hereby, Cypress Semiconductor declares that the Bluetooth module CYBLE-212020-01 complies with the essential requirements and other relevant provisions of Directive 1999/5/EC. As a result of the conformity assessment procedure described in Annex III of the Directive 1999/5/EC, the end-customer equipment should be labeled as follows:

All versions of the CYBLE-212020-01 in the specified reference design can be used in the following countries: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, The Netherlands, the United Kingdom, Switzerland, and Norway.

**MIC Japan**

CYBLE-212020-01 is certified as a module with type certification number 203-JN0509. End products that integrate CYBLE-212020-01 do not need additional MIC Japan certification for the end product.

End product can display the certification label of the embedded module.

Model Name: EZ-BLE PProC Module
