### ACPL-M43U-000E

Wide Operating Temperature 1MBd Digital Optocoupler with R<sup>2</sup>Coupler<sup>™</sup> Isolation

# **Data Sheet**

### **Description**

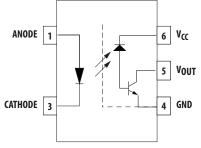

The ACPL-M43U is a single channel, high temperature, high CMR, high speed digital optocoupler in a five lead miniature footprint specifically used for industrial applications. The SO-5 JEDEC registered (MO-155) package outline does not require "through holes" in a PCB. This package occupies approximately one-fourth the footprint area of the standard dual-in-line package. The lead profile is designed to be compatible with standard surface mount processes.

This digital optocoupler uses an insulating layer between the light emitting diode and an integrated photon detector to provide electrical insulation between input and output. Separate connections for the photodiode bias and output transistor collector increase the speed up to a hundred times over that of a conventional photo-transistor coupler by reducing the base-collector capacitance.

The ACPL-M43U has an increased common mode transient immunity of  $30kV/\mu s$  minimum at  $V_{CM} = 1500V$  over extended temperature range.

Avago R<sup>2</sup>Coupler isolation products provide the reinforced insulation and reliability needed for critical in auto¬motive and high temperature industrial applications.

#### **Functional Diagram**

| Truth Table |      |  |  |  |  |  |  |  |
|-------------|------|--|--|--|--|--|--|--|
| LED         | Vo   |  |  |  |  |  |  |  |
| ON          | LOW  |  |  |  |  |  |  |  |
| 0FF         | HIGH |  |  |  |  |  |  |  |
|             |      |  |  |  |  |  |  |  |

The connection of a 0.1  $\mu F$  bypass capacitor between pins 4 and 6 is recommended.

#### **Features**

- High Temperature and Reliability IPM Driver for Industrial Applications.
- 30 kV/μs High Common-Mode Rejection at V<sub>CM</sub> = 1500 V (typ)
- Compact, Auto-Insertable SO5 Packages
- Wide Temperature Range: -40°C ~ 125°C
- High Speed: 1MBd (Typ)
- Low LED Drive Current: 10mA (typ)
- Low Propagation Delay: 300ns (typ)
- Worldwide Safety Approval:
  - UL1577 recognized, 3750Vrms/1min
  - CSA Approved
  - IEC/EN/DIN EN 60747-5-5 Approved

### **Applications**

- Industrial Intelligent Power Module isolation for motor controls
- Isolated IGBT/MOSFET gate drive
- AC and brushless dc motor drives
- Industrial inverters for power supplies

**CAUTION:** It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

### **Ordering Information**

| Options     |                |         | Surface | Tape   | IEC/EN/DIN   |               |
|-------------|----------------|---------|---------|--------|--------------|---------------|
| Part Number | RoHS Compliant | Package | Mount   | & Reel | EN 60747-5-5 | Quantity      |
| ACPL-M43U   | -000E          | 50 F    | Х       |        | Х            | 100 per tube  |
| ACPL-M43U   | -500E          | SO-5    | Х       | Х      | Х            | 1500 per reel |

To order, choose a part number from the part number column and combine with the desired option from the option column to form an order entry.

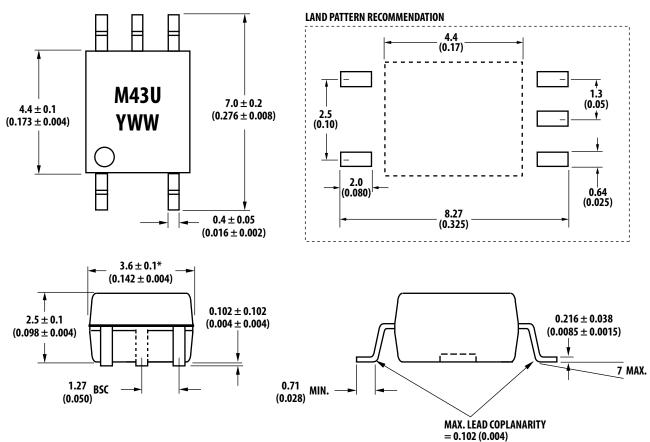

### Example 1:

ACPL-M43U-500E to order product of Mini-flat Surface Mount 5-pin package in Tape and Reel packaging with RoHS compliant.

Option datasheets are available. Contact your Avago sales representative or authorized distributor for information.

### **Package Outline Drawings**

### ACPL-M43U Small Outline SO-5 Package (JEDEC MO-155)

**DIMENSIONS IN MILLIMETERS (INCHES)** 

NOTE: FLOATING LEAD PROTRUSION IS 0.15 mm (6 mils) MAX.

<sup>\*</sup> MAXIMUM MOLD FLASH ON EACH SIDE IS 0.15 mm (0.006)

### **Recommended Reflow Soldering Profile**

Recommended reflow soldering condition are per JEDEC Standard J-STD-020 (latest revision). Non-halide flux should be used.

# **Regulatory Information**

The ACPL-M43U is approved by the following organizations:

Ш

Approved under UL 1577, component recognition program up to  $V_{ISO} = 3750$  VRMS expected prior to product release.

CSA

Approved under CSA Component Acceptance Notice #5.

### IEC/EN/DIN EN 60747-5-5 Approved under:

IEC 60747-5-5:2007 EN 60747-5-5:2011

#### IEC/EN/DIN EN 60747-5-5 Insulation Characteristics\*

| Description   | Symbol                  | Characteristic   | Unit              |

#### Notes:

- 1. Derate linearly above 85°C free-air temperature at a rate of 0.25 mA/°C.
- 2. Derate linearly above 85°C free-air temperature at a rate of 0.30 mA/°C.
- 3. Derate linearly above 85°C free-air temperature at a rate of 0.375 mW/°C.
- 4. Derate linearly above  $85^{\circ}$ C free-air temperature at a rate of 1.875 mW/°C.
- 5. CURRENT TRANSFER RATIO in percent is defined as the ratio of output collector current, I<sub>O</sub>, to the forward LED input current, I<sub>F</sub>, times 100.
- 6. Device considered a two terminal device: pin 1 and 3 shorted together and pins 4, 5 and 6 shorted together.
- 7. In accordance with UL 1577, each optocoupler is proof tested by applying an insulation test voltage ≥ 4500 V<sub>RMS</sub> for 1 second (leakage detection current limit, II-O ≤ 5 μA).
- 8. Common transient immunity in a Logic High level is the maximum tolerable (positive)  $dV_{CM}/dt$  on the rising edge of the common mode pulse,  $V_{CM}$ , to assure that the output will remain in a Logic High state (i.e.,  $V_O > 2.0$  V). Common mode transient immunity in a Logic Low level is the maximum tolerable (negative)  $dV_{CM}/dt$  on the falling edge of the common mode pulse signal,  $V_{CM}$  to assure that the output will remain in a Logic Low state (i.e.,  $V_O < 0.8$  V).
- 9. The 1.9 k $\Omega$  load represents 1 TTL unit load of 1.6 mA and the 5.6 k pull-up resistor.
- 10. The frequency at which the ac output voltage is 3 dB below its mid-frequency value.
- 11. Use of a 0.1  $\mu\text{F}$  bypass capacitor connected between pins 4 and 6 is recommended.
- 12. Pulse Width Distortion (PWD) is defined as |t<sub>PHL</sub> t<sub>PLH</sub>| for any given device.
- 13. The difference between  $t_{PLH}$  and  $t_{PHL}$  between any two parts under the same test condition. In accordance with UL1577, each optocoupler is proof tested by applying an insulation test voltage  $\geq$  4500  $V_{RMS}$  for 1 second (leakage detection current limit, II-O  $\leq$  5  $\mu$ A).
- 14. Pulse: f = 0 kHz, Duty Cycle = 10%.
- $15. \ Use \ of a \ 0.1 \ \mu F \ by pass \ capacitor \ connected \ between \ pins \ 4 \ and \ 6 \ can \ improve \ performance \ by \ filtering \ power \ supply \ line \ noise.$
- 16. The difference between t<sub>PLH</sub> and t<sub>PHL</sub> between any two parts under the same test condition. (See IPM Dead Time and Propagation Delay Specifications section.)
- 17. Common mode transient immunity in a Logic High level is the maximum tolerable  $dV_{CM}/dt$  of the common mode pulse, VCM, to assure that the output will remain in a Logic High state (i.e.,  $V_O > 3.0 \text{ V}$ ).
- 18. Common mode transient immunity in a Logic Low level is the maximum tolerable  $dV_{CM}/dt$  of the common mode pulse, VCM, to assure that the output will remain in a Logic Low state (i.e.,  $V_O < 1.0 \text{ V}$ ).
- 19. Pulse Width Distortion (PWD) is defined as |t<sub>PHL</sub> t<sub>PLH</sub>| for any given device.
