WE866C3

Wi-Fi 802.11 ac (1x1) BT-4.2

Product Description

The WE866C3 is a low power, dual-band (2.4 & 5GHz), 1-stream (1x1) 802.11ac and Bluetooth 4.2 module with an extremely small footprint that provides an easy & cost-effective way for manufacturers to add wireless connectivity to their products. With the integrated LTE-WiFi/BT coexistence filter, the product offers a powerful cellular backhaul with our LE910Cx 4G LTE module family. The WE866C3 also offers a high bandwidth Wi-Fi transceiver (Network Interface Card), for Linux, Android* & Win-CE* powered IoT systems using the advanced 802.11ac MU-MIMO technology.

The module supports a low-power, high-speed SDIO3.0 host interface for Wi-Fi and a UART interface for Bluetooth (BT). It also offers an additional PCM interface for BT-Audio.

The WE866C3 enables faster time to market, with off-the-shelf Cloud connectivity (deviceWise), Firmware upgrade, support of complete suite of WPA/WPA2 Personal and Enterprise security etc. The advanced Wi-Fi/Bluetooth coexistence and concurrent mode (simultaneous operation of Wi-Fi AP & Client) makes WE866C3 a best choice for a wide range of IoT applications.

The product is an ideal solution for organizations with limited RF (Wi-Fi/BT) expertise or for those seeking faster time to market, as it reduces RF design time and removes the burden of testing and certification.
