

Parameter	Rating	Units
Blocking Voltage	350	V_p
Load Current	120	mA_{rms} / mA_{DC}
On-Resistance (max)	30	Ω
LED Current to operate	2	mA

Features

- 1500V_{rms} Input/Output Isolation
- Small 8-Pin SOIC Package
- TTL/CMOS Compatible input
- Arc-Free With No Snubbing Circuits
- No EMI/RFI Generation
- Immune to radiated EM fields
- SMD Pick & Place, Wave Solderable
- Tape & Reel Version Available

Applications

- Telecommunication
- Security
 - Passive Infrared Detectors (PIR)
 - Data Signalling
 - Sensor Circuitry
- Instrumentation
 - Multiplexers
 - Data Acquisition
 - Electronic Switching
 - I/O Subsystems
- Medical Equipment—Patient/Equipment Isolation
- Aerospace
- Industrial Controls

Pin Configuration

Description

The CPC2330N is a miniature device with two independent solid state relays, one normally open (1-Form-A) and the other normally closed (1-Form-B), in an 8-pin SOIC package with 1500V_{rms} of input to output isolation.

The optically coupled outputs, which use IXYS Integrated Circuits Division's patented OptoMOS architecture, are controlled by a highly efficient GaAIAs infrared LED.

Using IXYS Integrated Circuits Division's state of the art, double-molded vertical construction packaging, the CPC2330N is ideal for replacing larger less-reliable reed and electromechanical relays.

¹ Load current derates linearly from 120mA @ 25°C to 60mA @ 85°C, and must be derated for both poles operating simultaneously.

² Measurement taken within 1 second of on-time.

³ For applications requiring high temperature operation (greater than 60°C) an LED drive current of 4mA is recommended.

Manufacturing Information

Moisture Sensitivity

All plastic encapsulated semiconductor packages are susceptible to moisture ingress. IXYS Integrated Circuits Division classified all of its plastic encapsulated devices for moisture sensitivity according to the latest version of the joint industry standard, **IPC/JEDEC J-STD-020**, in force at the time of product evaluation. We test all of our products to the maximum conditions set forth in the standard, and guarantee proper operation of our devices when handled according to the limitations and information in that standard as well as to any limitations set forth in the information or standards referenced below.

Failure to adhere to the warnings or limitations as established by the listed specifications could result in reduced product performance, reduction of operable life, and/or reduction of overall reliability.

This product carries a **Moisture Sensitivity Level (MSL) rating** as shown below, and should be handled according to the requirements of the latest version of the joint industry standard **IPC/JEDEC J-STD-033**.

Device	Moisture Sensitivity Level (MSL) Rating
CPC2330N	MSL 3

ESD Sensitivity

This product is **ESD Sensitive**, and should be handled according to the industry standard **JESD-625**.

Reflow Profile

This product has a maximum body temperature and time rating as shown below. All other guidelines of **J-STD-020** must be observed.

Device	Maximum Temperature x Time
CPC2330N	260°C for 30 seconds

Board Wash

IXYS Integrated Circuits Division recommends the use of no-clean flux formulations. However, board washing to remove flux residue is acceptable. Since IXYS Integrated Circuits Division employs the use of silicone coating as an optical waveguide in many of its optically isolated products, the use of a short drying bake could be necessary if a wash is used after solder reflow processes. Chlorine- or Fluorine-based solvents or fluxes should not be used. Cleaning methods that employ ultrasonic energy should not be used.

Mechanical Dimensions

NOTES:

1. All dimensions in millimeters
2. 10 sprocket hole pitch cumulative tolerance ± 0.20 .
3. Carrier camber is within 1mm in 250mm.
4. Tape material : Black Conductive Polystyrene Alloy.
5. All dimensions meet EIA-481-C requirements.
6. Thickness : 0.30 ± 0.05 mm.
7. Component load per 13" reel : 2000 pcs.
