Inductive loads (e.g. contactors, relays, etc.) are to be suppressed by means of a suitable circuit.

## notice - Wiring example

To secure a guard door up to PL 4 and Category \#03\#
Monitoring 1 guard door(s), each with a magnetic safety sensor of the BNS range
Start button (S) with edge detection
The feedback circuit monitors the position of the contactors K3 and K4.
Automatic start: The automatic start is programmed by connecting the feedback circuit to the terminals $\mathrm{X} 1 / \mathrm{X} 3$. If the feedback circuit is not required, establish a bridge
The wiring diagram is shown with guard doors closed and in de-energised condition.
