

## 2.5 Ω, High Bandwidth, Dual SPDT Analog Switch

### DESCRIPTION

The DG2517E is low-voltage dual single-pole / double-throw monolithic CMOS analog switches. Designed to operate from 1.8 V to 5.5 V power supply, the DG2517E achieves a bandwidth of 221 MHz while providing low on-resistance (2.5 Ω), excellent on-resistance matching (0.3 Ω) and flatness (1 Ω) over the entire signal range.

The DG2517E offers the advantage of high linearity that reduces signal distortion, making ideal for audio, video, and USB signal routing applications.

Built on Vishay Siliconix's proprietary sub-micron high-density process, the DG2517E brings low power consumption at the same time as reduces PCB spacing with the MSOP10 and DFN10 packages.

As a committed partner to the community and the environment, Vishay Siliconix manufactures this product with the lead (Pb)-free device terminations. The DFN package has a nickel-palladium-gold device termination and is represented by the lead (Pb)-free "-GE4" suffix. The MSOP package uses 100 % matte Tin device termination and is represented by the lead (Pb)- free "-GE3" suffix. Both the matte Tin and nickel-palladium-gold device terminations meet all JEDEC® standards for reflow and MSL ratings.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
